## Assessment Schedule - 2020

## Physics: Demonstrate understanding of mechanical systems (91524)

## Evidence Statement

| NO | N1 | N2 | A3 | A4 | M5 | M6 | E7 | E8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1A | $\begin{gathered} 2 \mathrm{~A} \\ \text { or } \\ 1 \mathrm{M} \end{gathered}$ | $\begin{gathered} 3 \mathrm{~A} \\ \text { or } \\ 1 \mathrm{~A}+1 \mathrm{M} \\ \text { or } \\ 1 \mathrm{E}- \end{gathered}$ | $\begin{gathered} 4 \mathrm{~A} \\ \text { or } \\ 2 \mathrm{~A}+\mathrm{M} \\ \text { or } \\ 2 \mathrm{M} \\ \text { or } \\ 1 \mathrm{~A}+1 \mathrm{E}- \end{gathered}$ | $\begin{gathered} 1 \mathrm{~A}+2 \mathrm{M} \\ \text { or } \\ 1 \mathrm{M}+1 \mathrm{E}- \\ \quad \text { or } \\ 3 \mathrm{~A}+1 \mathrm{M} \\ \quad \text { or } \\ 2 \mathrm{~A}+1 \mathrm{E}- \end{gathered}$ | $\begin{gathered} 2 \mathrm{~A}+2 \mathrm{M} \\ \text { or } \\ 3 \mathrm{M} \\ \text { or } \\ 1 \mathrm{~A}+3 \mathrm{M} \\ \text { or } \\ 3 \mathrm{~A}+1 \mathrm{E}- \\ \text { or } \\ 1 \mathrm{~A}+1 \mathrm{M}+1 \mathrm{E}- \end{gathered}$ | $\begin{gathered} 2 \mathrm{M}+1 \mathrm{E}- \\ \text { or } \\ 2 \mathrm{~A}+1 \mathrm{M}+1 \mathrm{E}- \\ \text { or } \\ \mathrm{A}+2 \mathrm{M}+1 \mathrm{E}- \end{gathered}$ | A $+2 \mathrm{M}+\mathrm{E}$ |

 needs to be correct (maximum 8). Note: E- and E only applies to the $\mathbf{E 7}$ and $\mathbf{E 8}$ decision.

| Q | Evidence | Achievement | Merit | Excellence |
| :---: | :---: | :---: | :---: | :---: |
| ONE <br> (a) |  | - BOTH correct. |  |  |
| (b) | In the horizontal position, gravity force = reaction (support) force, and forces are balanced. <br> When flying in a circle, the gravity force remains the same, but the lift force increases. This is because the horizontal component of the lift force provides the centripetal force for circular motion. <br> Vertical component of lift = gravity force <br> Horizontal component $=F_{\mathrm{c}}$ <br> So overall lift force increases when added as vectors. | - One situation explained with correct reasons. | - BOTH situations explained with correct reasons. |  |

NCEA Level 3 Physics (91524) 2020 — page 2 of 6

| (c) | $\begin{aligned} & F_{\mathrm{g}}=7.50 \times 10^{4} \times 9.81=735750 \mathrm{~N} \\ & F_{\text {lift }}=\frac{735750}{\cos 35^{\circ}}=898185 \mathrm{~N} \\ & F_{\mathrm{c}}=898185 \sin 35^{\circ}=515178 \mathrm{~N} \\ & F_{\mathrm{c}}=\frac{m v^{2}}{r} \rightarrow r=\frac{7.50 \times 10^{4} \times 54.0^{2}}{515178}=425 \mathrm{~m} \end{aligned}$ <br> OR $\begin{aligned} & F_{\mathrm{c}}=\frac{m v^{2}}{r}=F_{\text {liff }} \sin \theta \\ & F_{\mathrm{g}}=m g=F_{\text {lift }} \cos \theta \\ & \frac{F_{\mathrm{c}}}{F_{\mathrm{g}}}=\frac{v^{2}}{r g}=\tan \theta \\ & r=\frac{v^{2}}{g \tan \theta}=\frac{54.0^{2}}{6.869}=425 \mathrm{~m} \end{aligned}$ <br> OR $\begin{aligned} & a_{\mathrm{c}}=g \tan \theta=9.81 \times \tan 35^{\circ}=6.869 \mathrm{~m} \mathrm{~s}^{-2} \\ & a_{\mathrm{c}}=\frac{v^{2}}{r} \rightarrow r=\frac{v^{2}}{a_{\mathrm{c}}}=\frac{54.0^{2}}{6.869}=9.79 \mathrm{~N} \mathrm{~kg}^{-1} \end{aligned}$ | - Weight force correct. <br> OR <br> States vertical component of lift = weight force. <br> OR <br> States horizontal component of lift force = centripetal force. <br> OR <br> Correct vector diagram including labels and angle. | - Correct derivation for the radius but numerical answer wrong or absent (this covers follow on error) <br> OR <br> Calculates centripetal force correctly. <br> OR <br> Calculates centripetal acceleration correctly. | - All correct including a reasonable explanation. (E) <br> (A reasonable explanation could occur by showing all steps in the working from first principles, such as an appropriate vector diagram - such as lift, weight and centripetal forces OR acceleration due to gravity and centripetal acceleration) <br> - All correct including a reasonable explanation with calculator in radians. (E-) |
| :---: | :---: | :---: | :---: | :---: |
| (d) | $\begin{aligned} & F_{\mathrm{g}}=m g=\frac{\mathrm{G} M m}{r^{2}} \\ & g=\frac{\mathrm{G} M}{r^{2}}=\frac{6.674 \times 10^{-11} \times 5.98 \times 10^{24}}{(6370000+12800)^{2}}=9.79 \mathrm{~N} \mathrm{~kg}^{-1} \end{aligned}$ | - Missed the square on $r$ <br> OR <br> Did not include the full height from the centre of the Earth to the plane (giving $g=9.83$ or $9.84 \mathrm{~N} \mathrm{~kg}^{-1}$ ). <br> OR <br> - Calculates gravitational force as 734 to 735 kN . | - Correct calculation. |  |

NCEA Level 3 Physics (91524) 2020 — page 3 of 6

| Q | Evidence | Achievement | Merit | Excellence |
| :---: | :---: | :---: | :---: | :---: |
| TWO <br> (a) | This is a show question: $\begin{aligned} & I=\frac{2}{5} m r^{2} \rightarrow I=\frac{2}{5} \times 60 \times 0.20^{2}=0.96 \mathrm{~kg} \mathrm{~m}^{2} \\ & L=I \omega \rightarrow L=0.96 \times 9.56=9.1776 \mathrm{~kg} \mathrm{~m}^{2} \mathrm{~s}^{-1} \end{aligned}$ | Calculates I correctly as $0.96 \mathrm{kgm}^{2}$ OR <br> Calculates L correctly with incorrect I (Error Carried Forward or ECF) | - Correct working (Note, NOT answer as this is a SHOW question). |  |
| (b) | - Straightening her body increases rotational inertia, as rotational inertia depends on mass distribution. <br> - Straightening her body will mean her mass is further away from the axis of rotation. <br> - Since there are no external torques, angular momentum is conserved. Since $L=I \omega$, angular velocity decreases. <br> - Since angular velocity decreases, rotational kinetic energy decreases overall as the change in angular velocity is squared and this outweighs the increase in I since $E_{K-\text { rotational }}=\frac{1}{2} I \omega^{2}$ <br> OR <br> $E_{\mathrm{K} \text {-rotational }}=\frac{1}{2} \times \frac{L^{2}}{I}, I$ is increased, so $E_{\mathrm{K} \text {-rotational }}$ will decrease. (This is sufficient for Merit only because it does not address the instruction to talk about angular velocity). However, if the candidate USES L $=\mathrm{I} \omega$ to DERIVE the formula, then award full marks) | - Recognises $I$ increases. <br> OR <br> Recognises that angular momentum is conserved so angular velocity decreases. <br> OR <br> Recognises that angular velocity decreases because mass is getting farther from the centre. <br> Accept inertia in place of rotational inertia. | - Two concepts explained correctly with links. <br> Accept inertia in place of rotational inertia | - All four concepts explained and linked. (E) <br> - Three or more concepts explained and linked (including bullet point 4) but without the justification of the conservation of angular momentum. (E-) <br> Accept inertia in place of rotational inertia. |
| (c) | $\begin{aligned} & L=I \omega_{\mathrm{f}} \rightarrow \omega_{\mathrm{f}}=\frac{L}{4.80}=\frac{9.1776}{4.80}=1.912 \mathrm{rad} \mathrm{~s}^{-1} \\ & \alpha=\frac{\omega_{\mathrm{f}}-\omega_{\mathrm{i}}}{t}=\frac{1.912-9.56}{0.280}=-27.3 \mathrm{rad} \mathrm{~s}^{-2} \end{aligned}$ | - Correct final angular velocity of $1.912 \mathrm{rad} \mathrm{s}^{-1}$. <br> OR <br> - Attempts to calculate angular acceleration but with incorrect final angular velocity (ECF). | - Correct answer and working. |  |
| (d) | $\begin{aligned} & \theta=2 \times 2 \pi=12.57 \mathrm{rad} \\ & \omega=\frac{\Delta \theta}{\Delta t}=\frac{12.57}{1.25}=10.1 \mathrm{rad} \mathrm{~s}^{-1} \end{aligned}$ | - Correct answer. |  |  |

NCEA Level 3 Physics (91524) 2020 — page 4 of 6

| Q | Evidence | Achievement | Merit | Excellence |
| :---: | :---: | :---: | :---: | :---: |
| THREE <br> (a) | $T=2 \pi \sqrt{\frac{3.0}{9.81}}=3.4746 \mathrm{~s}$ | - Correct working. (Note: NOT answer as this is a SHOW question.) |  |  |
| (b) | When Serena stands up, the centre of mass shifts upwards, reducing the effective length of the swing. <br> Since $T$ is proportional to square root length $(T \alpha \sqrt{L})$, decreasing the length will decrease period. So it will take less time to complete one swing. | - Idea about length reducing due to shift in COM. <br> OR <br> Correct relationship described or stated. $(T \propto \sqrt{L})$ | - Complete answer with link and reasoning. |  |
| (c) | - The straight line through the origin shows that the restoring force is directly proportional to displacement. <br> - The negative gradient shows that the restoring force is in opposite direction to displacement <br> These are the two conditions necessary for SHM. <br> OR <br> - The equation for SHM gives $a=-\omega^{2} y$. Here, the equation is multiplied by $m$ to give $F$. <br> - Mass is a constant, positive scalar so the equation becomes $F=$ negative constant.y, which is the equation for the line given. | ONE correct statement. <br> OR <br> Accept equations as evidence e.g. $\begin{aligned} & a=-\omega^{2} y \text { or } \\ & F=-m \omega^{2} y \text { or } \\ & a \alpha-y \text { or } F \alpha-y \end{aligned}$ | - BOTH correct statements from EITHER viewpoint, restoring force or the governing equation. |  |

(d)

Any of the following:

- Correct diagram with labels. OR
Selected a correct equation as
$v=A \omega \cos \omega t$ or $v=A \omega \cos \theta$
$v=-A \omega \sin \omega t$ or $v=-A \omega \sin \theta$
OR
Correct angle in either degrees or radians.
OR
Correct angular frequency.

Attempts to calculate the velocity using a correct method but with incorrect angle or angular frequency BUT NOT BOTH.

- Correct working and answer for velocity with unit. (E)
- Correct working and answer for velocity without unit. (E-)

## Cut Scores

| Not Achieved | Achievement | Achievement with Merit | Achievement with Excellence |
| :---: | :---: | :---: | :---: |
| $0-6$ | $7-13$ | $14-18$ | $19-24$ |
