Title	Perform hand soldering in aerospace avionics manufacturing		
Level	3	Credits	25

Purpose	People credited with this unit standard are able to: select soldering equipment; produce manual solder connections for avionics manufacturing; and maintain soldering equipment.
	avionics manufacturing, and maintain soldening equipment.

Classification	Aeronautical Engineering > Aerospace Engineering
Available grade	Achieved

Guidance Information

1 Definition

Enterprise procedures – procedures used by the organisation carrying out the work and applicable to the tasks being carried out. Examples are – standard operating procedures, safety procedures, equipment operating procedures, codes of practice, quality management practices and standards, procedures to comply with legislative and local body requirements.

2 Range

Competence may be demonstrated on one or more of the following – printed circuit board assemblies using active and passive components with leads, signal wiring, power wiring, terminations, connectors, screening, avionic components, product assemblies.

- 4 The following apply to all outcomes of this unit standard:
 - a all activities are to be completed and reported in accordance with enterprise procedures;
 - b all work practices must meet worksite's documented quality management requirements;
 - c all activities must comply with policies, procedures and requirements of the enterprises involved; and any relevant legislative and/or regulatory requirements, which include, but are not limited to, the Health and Safety at Work Act 2015.

Outcomes and performance criteria

Outcome 1

Select soldering equipment.

Performance criteria

- 1.1 Equipment and material that are suitable for the soldering application on avionics components are selected.
 - Range suitability may include but is not limited to temperature requirement, tip size, tip shape, solder material, fluxes, cleaning material.
- 1.2 Soldering equipment is set up and operated in accordance with enterprise quality and safety standards.

Outcome 2

Produce manual solder connections for avionics manufacturing.

Performance criteria

2.1 Component performance is not affected by the soldering process.

Range physical, heat, electrostatic damage.

- 2.2 Soldered connections are produced that comply with the required connection and quality standards for the application of aerospace avionics.
 - Range standards include IPC standards, physical appearance, mechanical strength, electrical properties, component placement, cleanliness of joint, application of heat, solder materials.

Outcome 3

Maintain soldering equipment.

Performance criteria

3.1 Soldering equipment is turned off when not in use for long periods.

- 3.2 Corroded or damaged tips are repaired or replaced.
- 3.3 Sponge is kept clean and damp.
- 3.4 Coating of solder is left on the tip when soldering iron is not in use.
- 3.5 Work area is left in a state that enables the next task to begin.

Planned review date 31 December 2027

Status information and last date for assessment for superseded versions

Process	Version	Date	Last Date for Assessment
Registration	1	30 March 2023	N/A
Rollover and Revision	2	27 June 2024	N/A

Consent and Moderation Requirements (CMR) reference	0028
