

Prepare students

If your students will be sitting a digital exam, they should already be confident using a device for assessment. Preparing students for their digital exams will require them to become confident using a device for assessment, ensuring they are confident using a device for assessment.

Students sitting digital exams should be able to:

- read and navigate webpages
- type an answer
- move a cursor to locate and select information on a page.

Before you decide to offer digital exams consider

- Are the students being assessed digitally in class?
- Has your school participated in a digital trial or pilot in the past? If not, what do you need to improve?
- Do you have the rooms required for the number of students you are assessing?
- Will there be enough devices to support all students completing the exam?
- Are your exam staff, including your Exam Centre Manager, confident using a device for assessment?

Practice activities

Plan some class time for students to check out these [practice activities](#)

- tasks to help students and teachers become confident using the device for assessment if there is a technical issue

- 2018 digital exam papers for subjects being offered online in 20
- what they need to know when going into the exam room e.g. ho
- answers to questions students might have about what to expect
