Level 1 Design and Visual Communication

91064: Produce instrumental, multi-view orthographic drawings that communicate technical features of design ideas

Exemplar for Merit

This submission communicates four correctly aligned views, including a sectional view which communicates some information not visible in the main outline.

Conventions, such as the labelling of views and reference lines, the use of key line types and dimensioning have been applied.

The indicated scale has been verified by dimensions.

This submission could have been strengthened by showing greater detail and more consistency of line weight.

NOTE: This submission was photographed, to better communicate the quality of the drawing. This has resulted in some distortion, which was not evident in the original.
