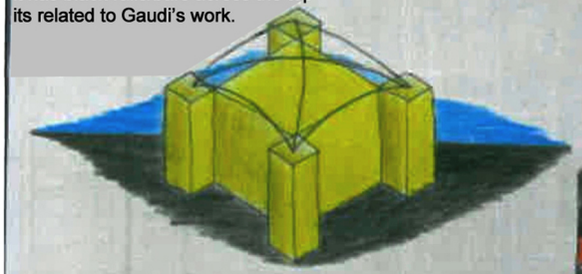
Student 5 page 1: Low Achieved

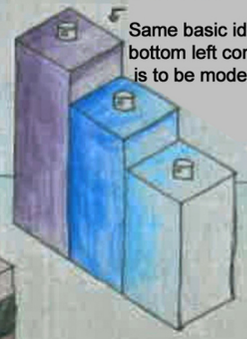
Concepts

1

This design is quite different to all the other concepts but because it has black rails/bars across the top its related to Gaudi's work.

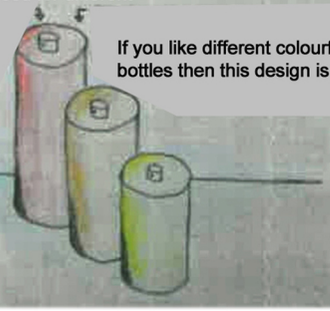


Same basic idea as the bottom left concept the idea is to be modern.



This design is good because its very different and interesting and you can place anything in it because theres a square box in the middle to store things ie jewellery

This design is very basic but it can be used for different smells



If you like different colourful bottles then this design is good

Concepts

2

This concept is based on a building from my research page.It is a basic shape and not good looking

This design has a gothic look and feel, it may be too complex for a perfuum bottle. I like the idea of the glass window effect.

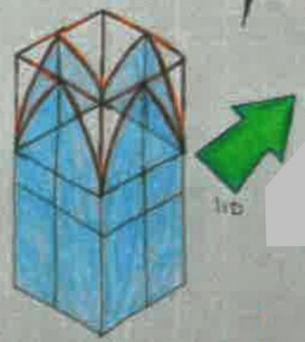
This design is like the top of a church but it is also starting to look like a pencil.

This drawing is meant to be like the big windows in churches (stanined glass)

Development

3

Hinges for flaps to drop down and open making it easier to take out bottle. It has a rustic look.



Lid design clear/blue glass lidslots over the shape of the glass structure

Could use a stained glass look here

Normal light blue glass

I like the idea of using a hinge to make it easier to open and close the box.

4

I have tested the size of the packaging and would use a bottle the same shape as below. The flaps of the packaging might interfere with the spray jet.
