In this design, the ground floor is the most important, consisting of a 20m x 20m space, which is divided into smaller sections. The classroom area is located in the south-east corner of the building, facing towards the main entrance. The classroom is designed to accommodate 30 students, with each student having a desk and chair. The classroom also includes a whiteboard and a projection screen for presentations.

The layout includes a small garden area in the north-west corner, which can be used for outdoor activities or as a relaxation area for students. There is also a small kitchen area located in the north-east corner, which is equipped with all necessary appliances for cooking and food preparation.

The layout also includes a storage area in the south-west corner, which can be used for storing large equipment or materials. The layout is designed to be flexible, allowing for future modifications based on the needs of the school.

The structure of the building is designed to be durable and weather-resistant. The walls are made of concrete, with a metal framework for support. The roof is made of corrugated metal sheets for insulation and weather protection.

Overall, this design is intended to provide a comfortable and functional learning environment for the students, with a focus on flexibility and adaptability.
