**Space Investigation**

- The bathroom has been added in the back area to the ground floor because it wasn’t convenient and has been moved to the side.
- The balcony and social area have been placed in the first floor with the balcony to open it. The living room is also a functional dining room.

**Floor Plan Investigation**

- The floor plan has been placed together to get the overall effect and an overall sequential movement.
- The study area has been placed together to get the overall effect and an overall sequential movement.

Other student work submitted has not been included in this exemplar.

**Structure Investigation**

- I have not chosen this structure because the floor plan does not follow the standard plan.
- The concrete slab for the desk is not effective because it should open the building on the outside view of the plan and structure.
- The door idea or open space in the front is open for the building.
- The building is facing north to give access to sunlight.

- The plan area access is very visible and easy to access.
- The floor is very light and easy to move, this creates the pedagogic page and space for the building.
