

Urban Art Deco furniture

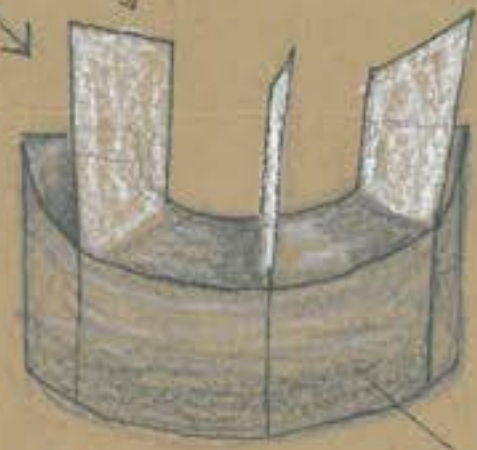

This seat could be in a park & have cupboards for people to put their shoes in while they play or look up valuations, to give that luxury of Art Deco.

bike leans behind seat

Panel so the panels create shade.

This seat could have gaps in the back of the seat so you can put your bike in them and then have a seat while bikes still in etc.

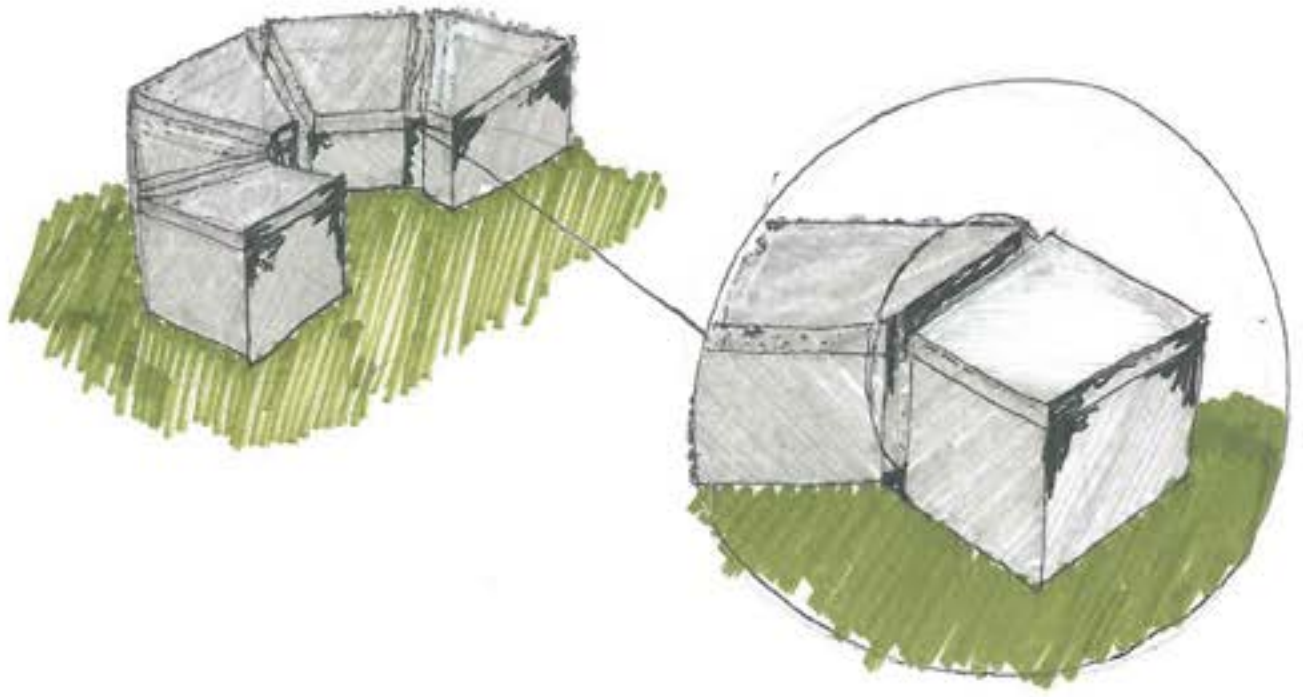

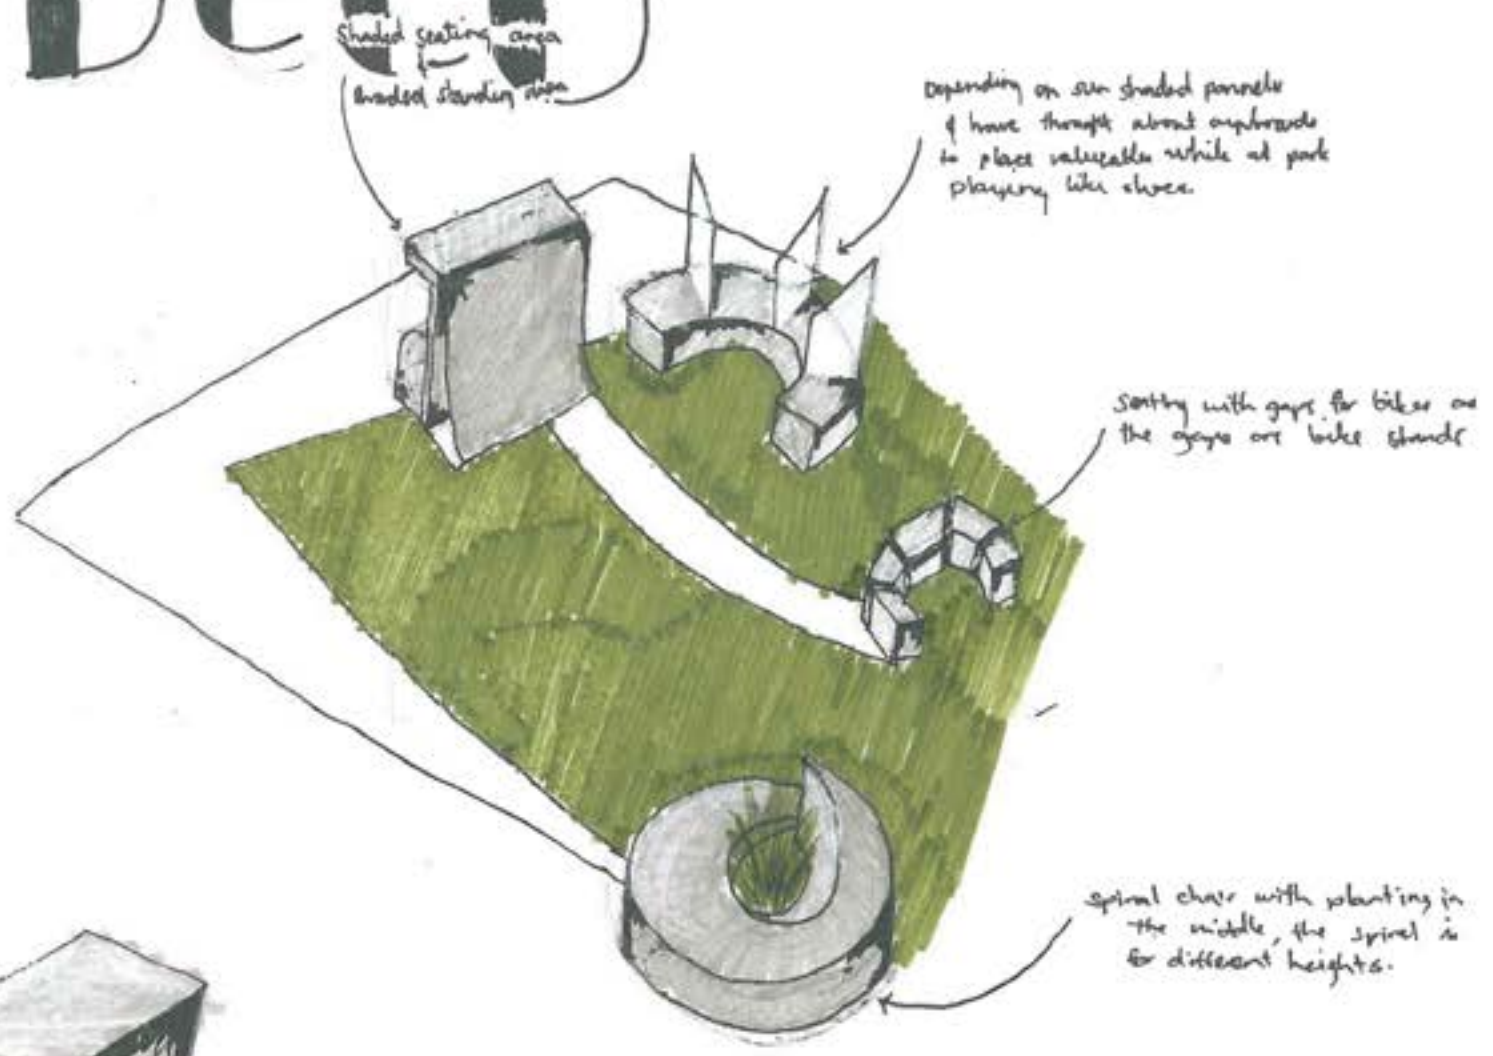

Bauhaus Exploration

Art Deco

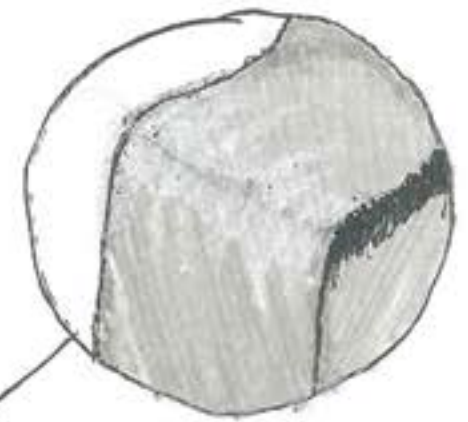

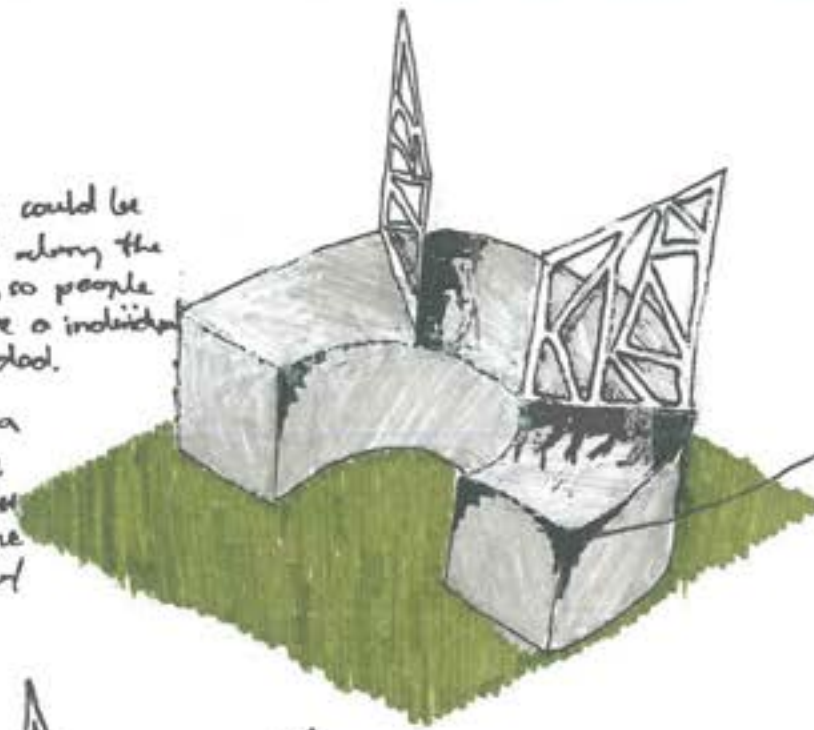

This is a luxury concrete outdoor seat, each seat is divided and you can put your bike in between each seat, but all the seats are still connected.

Development

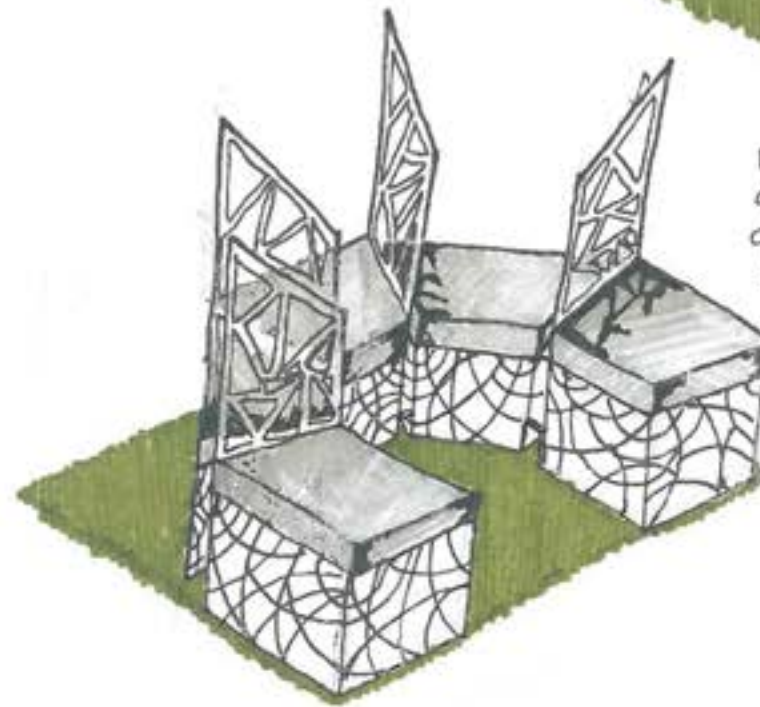

This seat/shade could be placed in Napier along the marine parade, so people can sit and have a individual seat and be shaded.

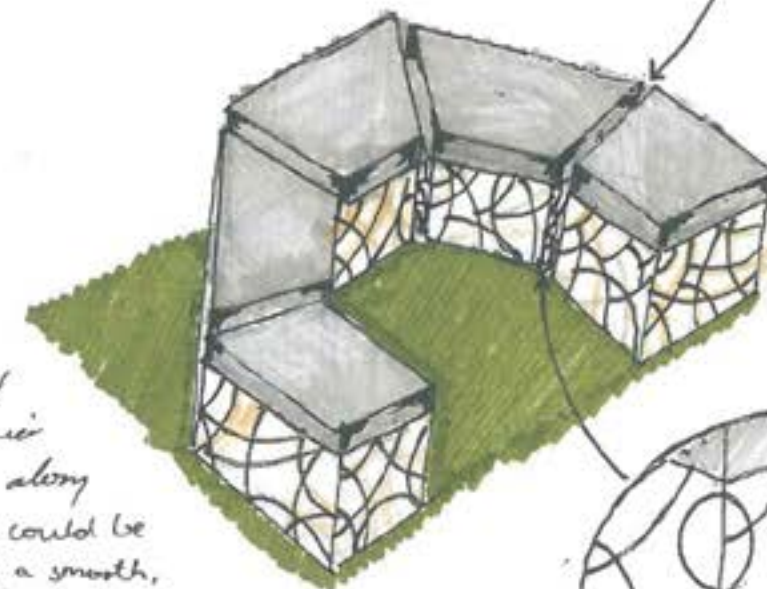

The concrete gives it a smooth simple look like Art Deco, And the triangles in the panels give it the shape Art Deco does and luxury.

Since it's concrete could curve all the edges to make it more public safe.

I combined both the wire seat and the shade seat which developed this seat, which has the concrete seats, wire bottoms that form bike stands, and the shade with triangles.

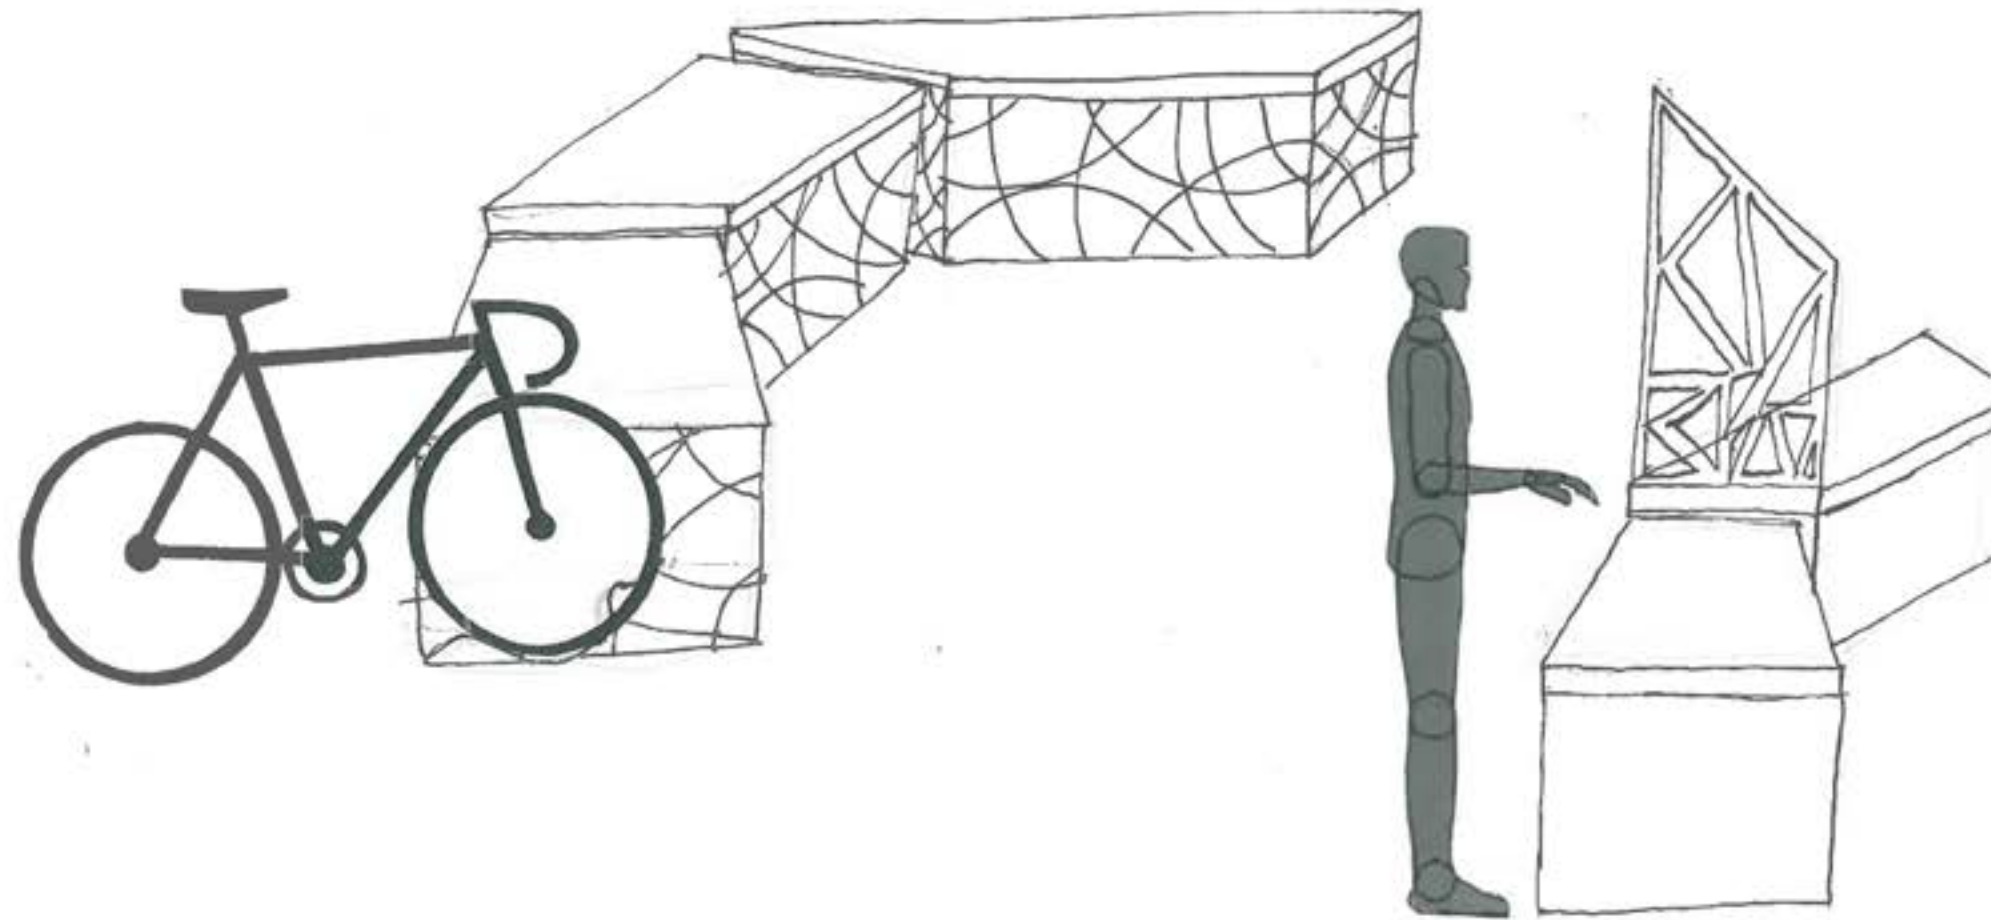

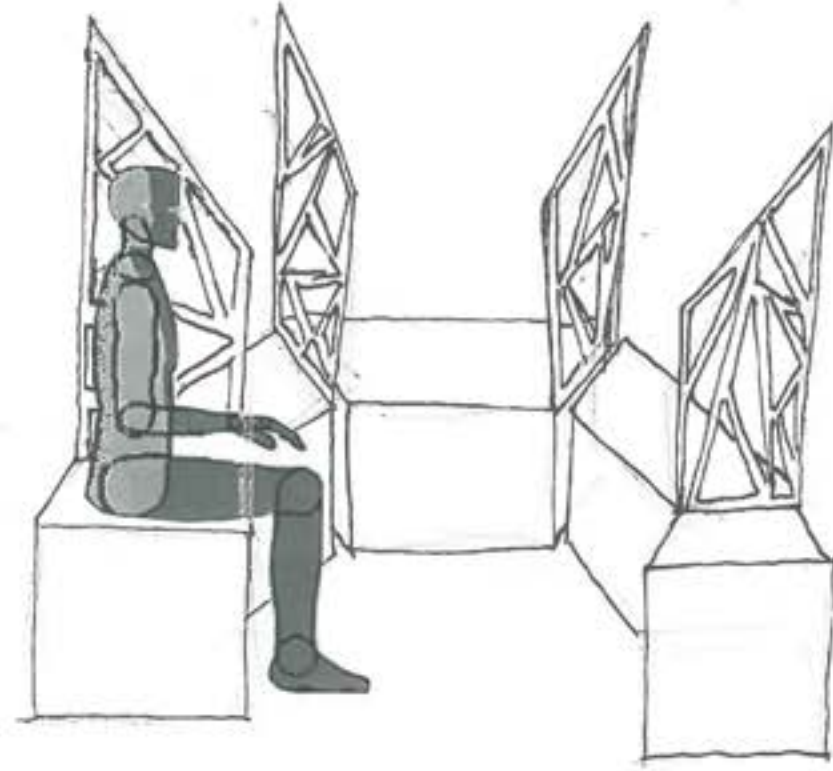

Wire under concrete top and then between the wire forms a bike stand.

This chair/bike stand could be placed in Napier by the new skate park or along the marine parade. The top could be a concrete block to give it a smooth, clean look, and then the underneath is a wire that creates luxury and forms the bike stands.

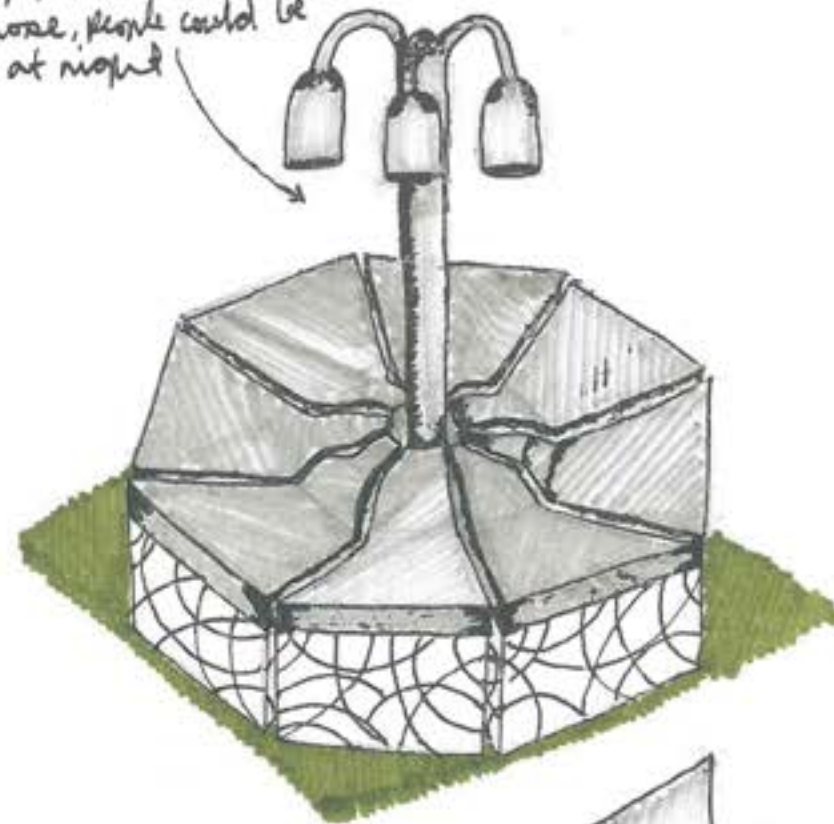

Development

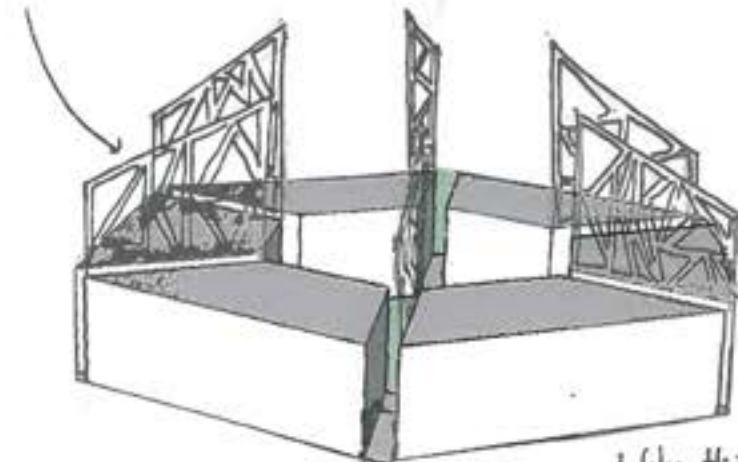

Development

Could also have bike stand
and light so more than 1
purpose, people could be
safe at night

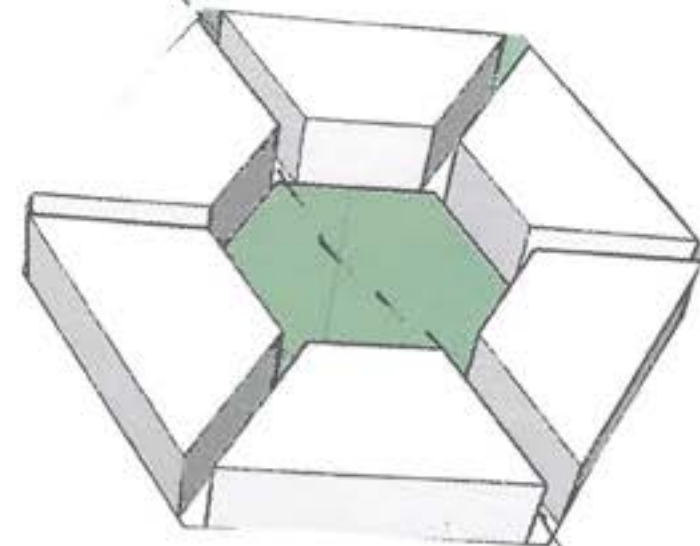

Shades inbetween

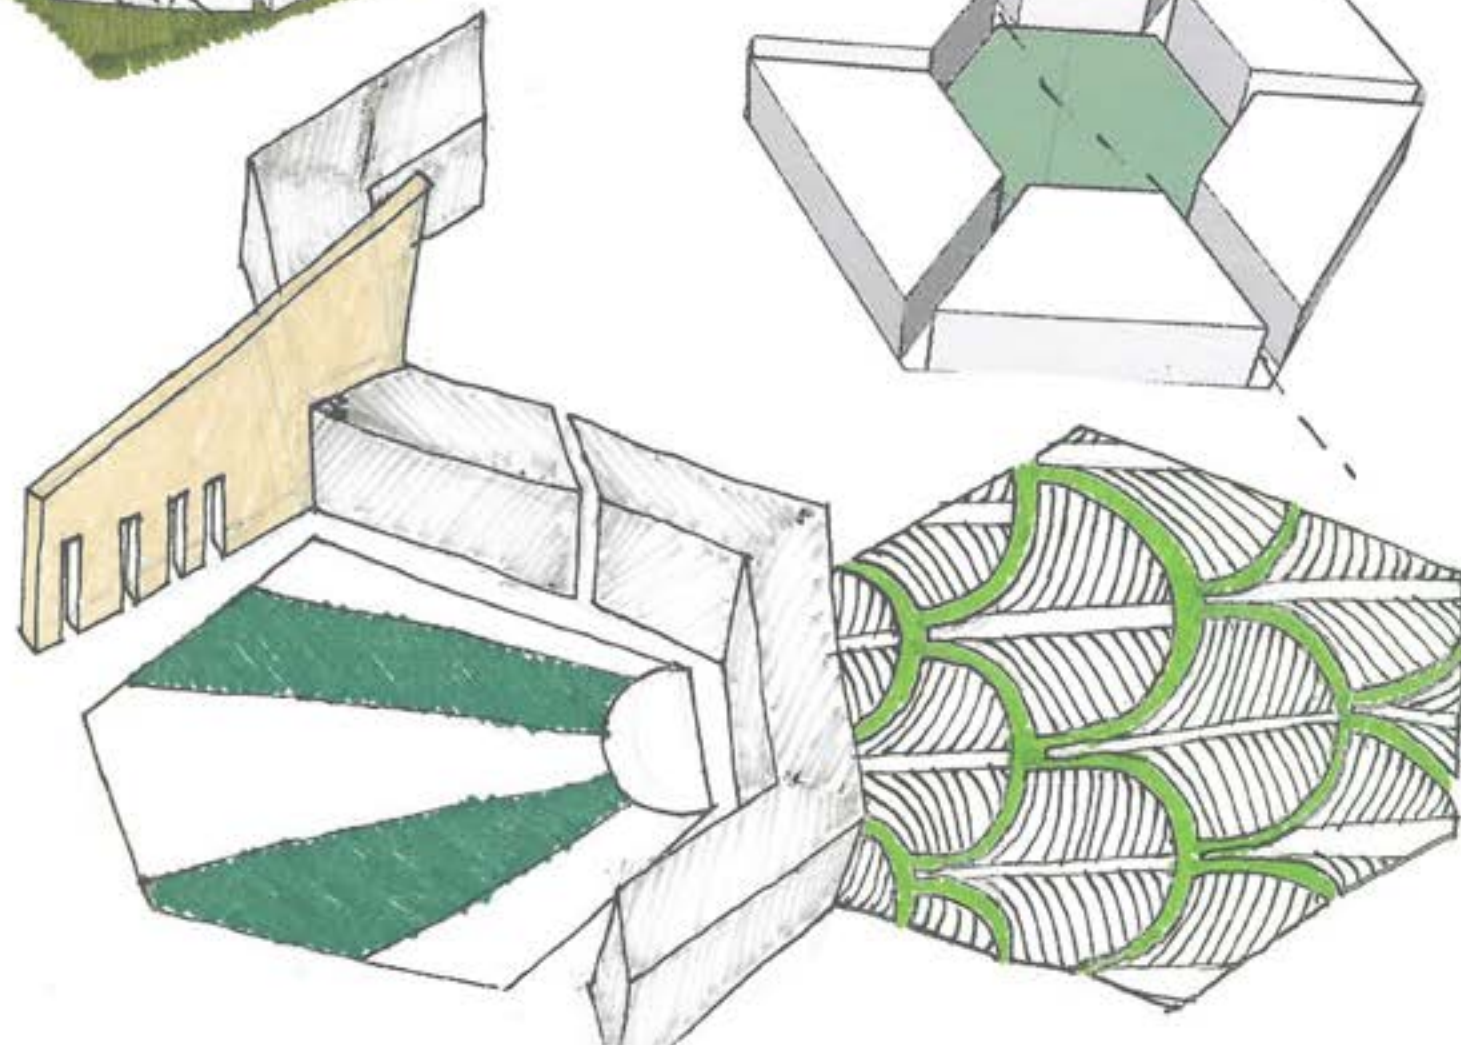

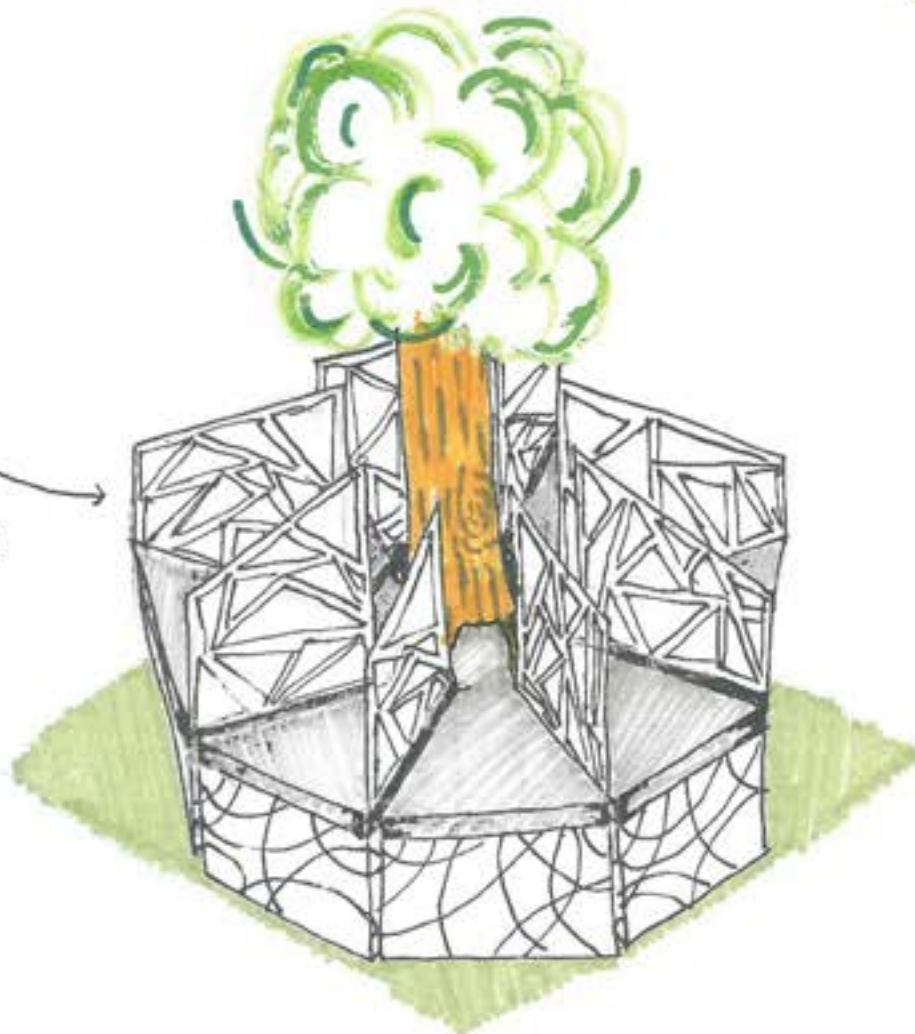

bike stand.

I like this shape better because
instead of having a half one
this one is full and don't have
to worry about space like the
other one.

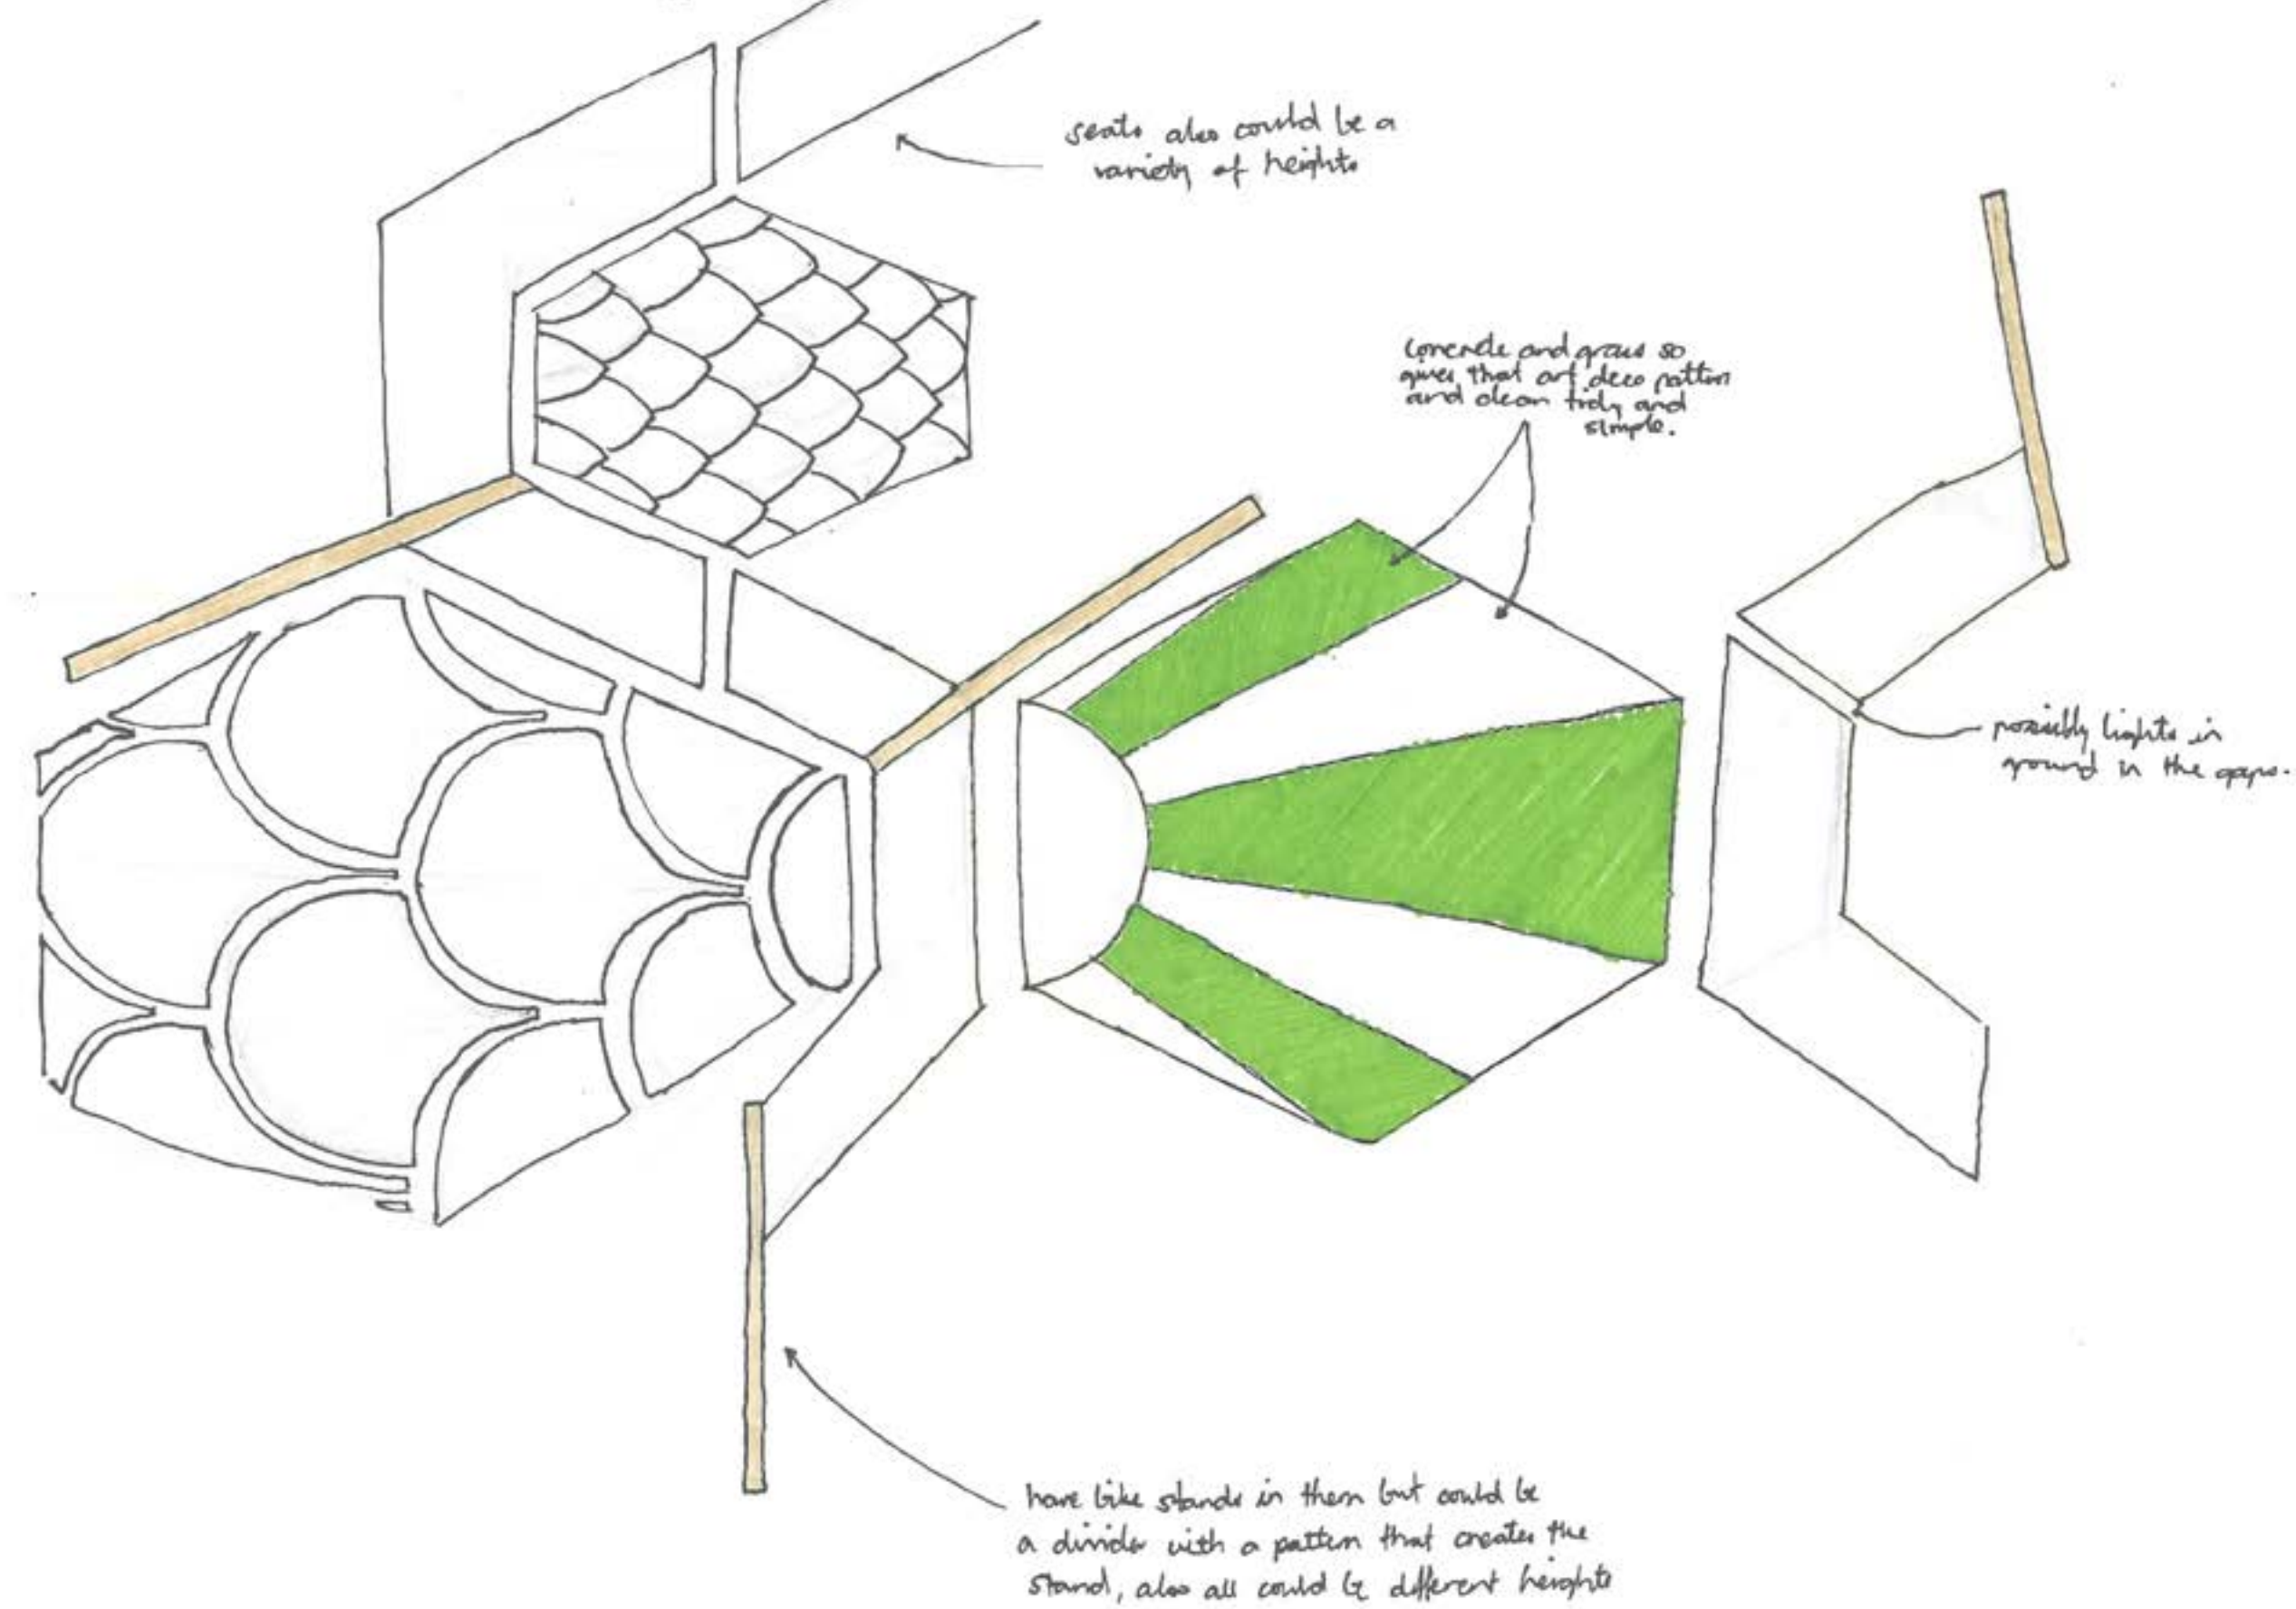

Cut down here

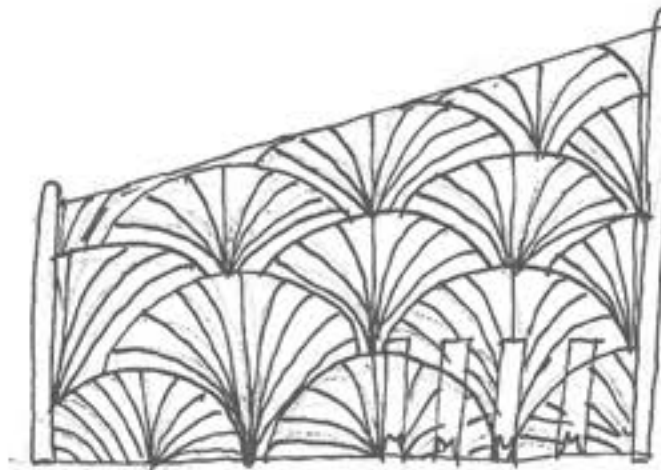

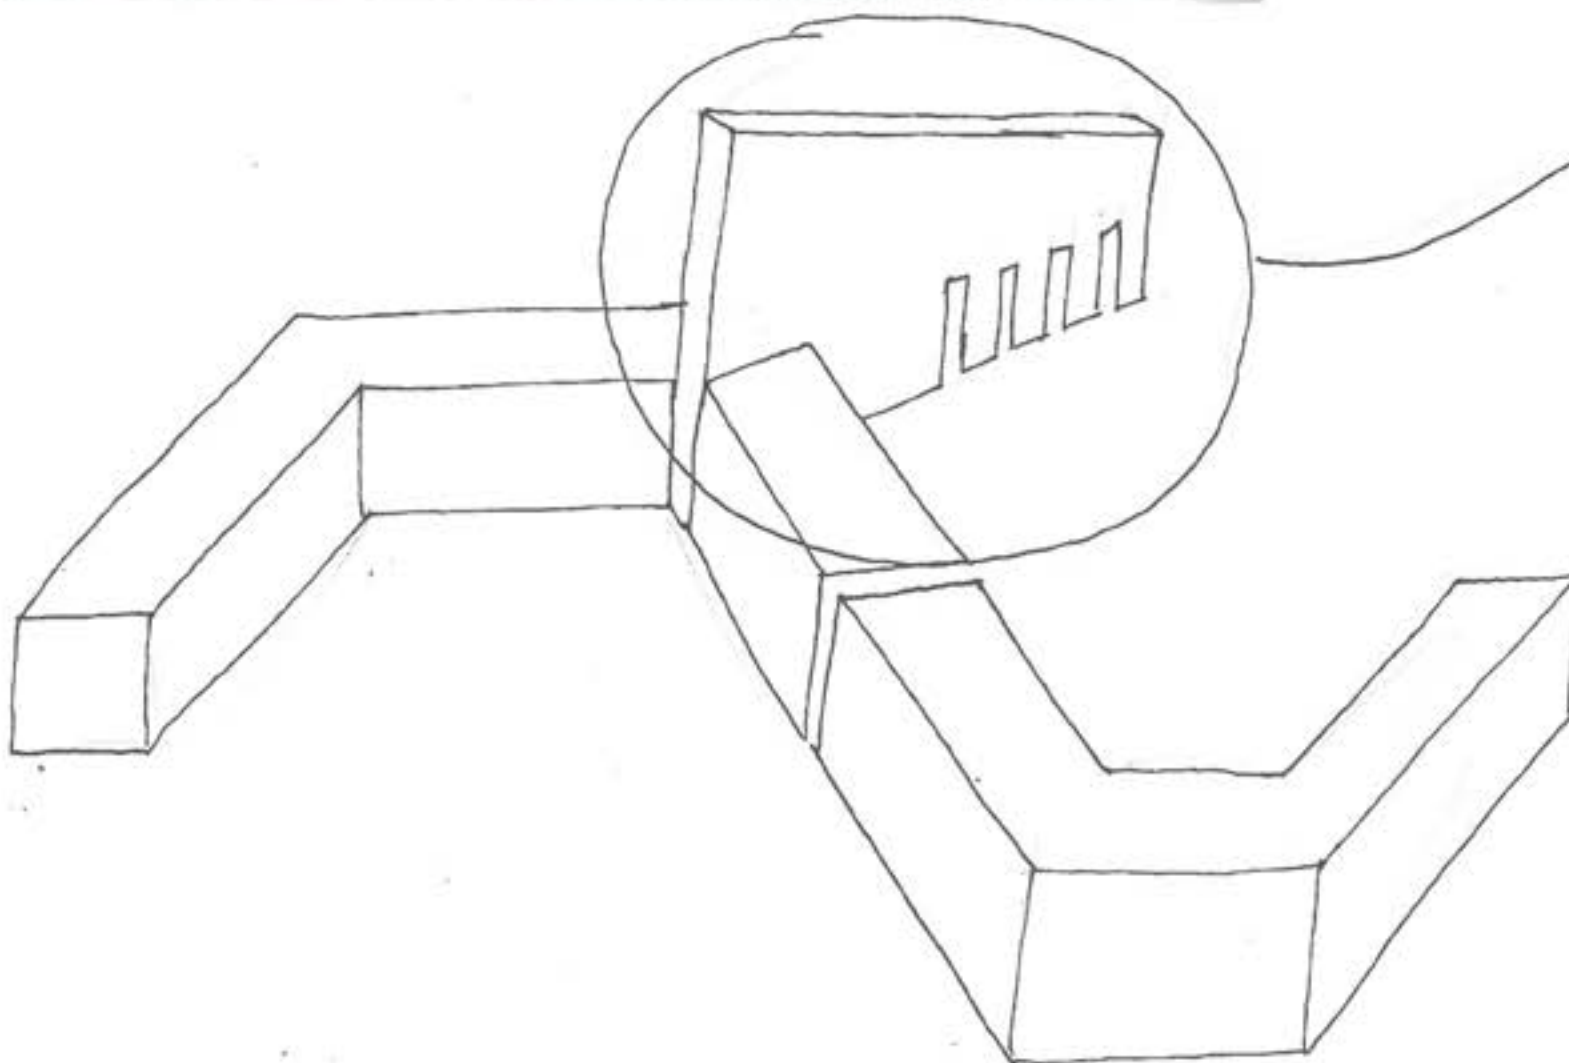

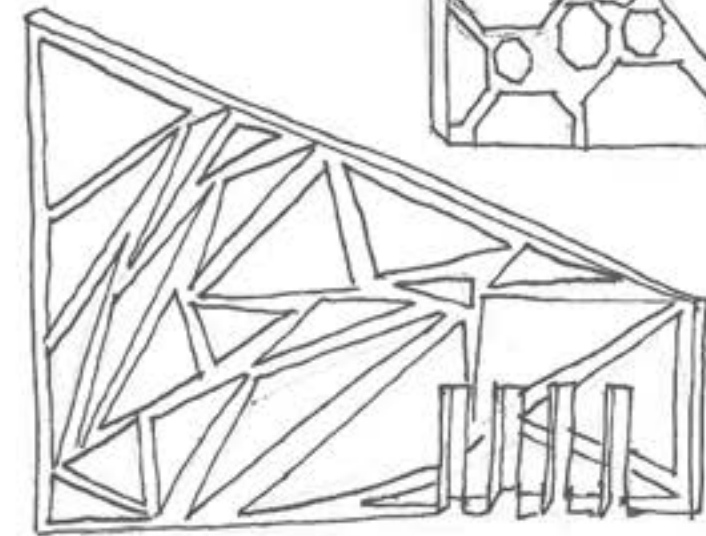

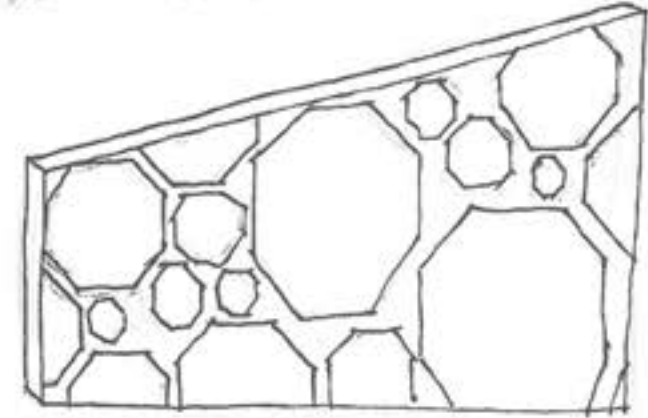

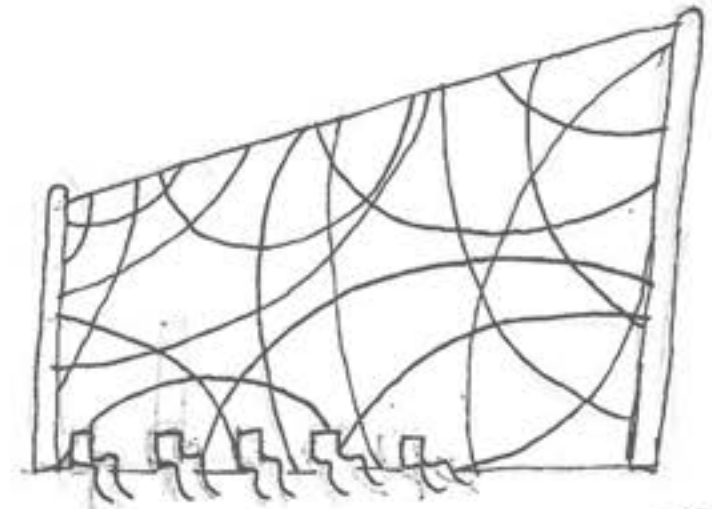

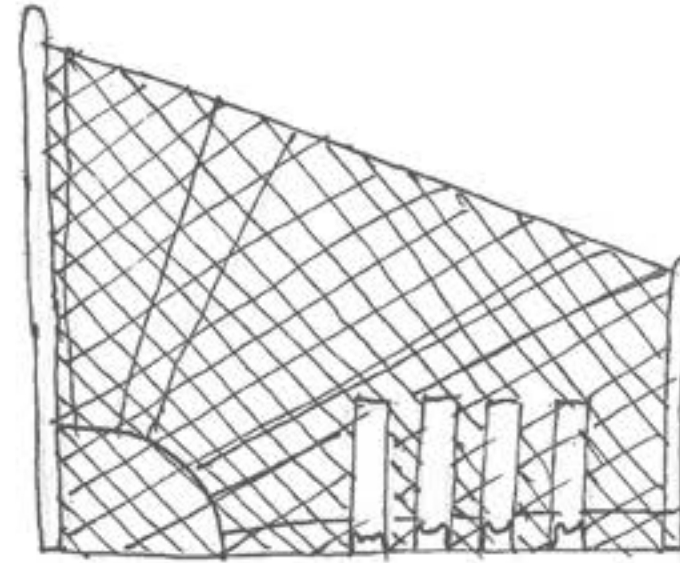

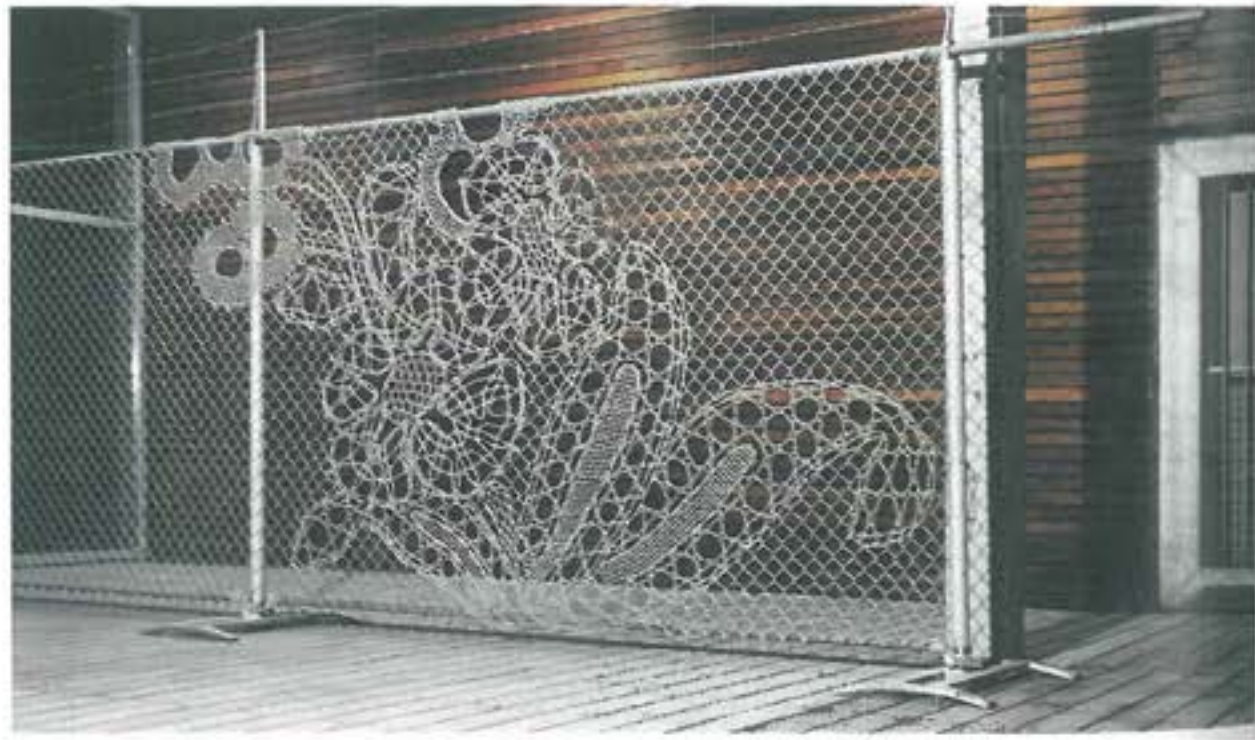

I like the shades
with coming to
something in the middle
but I feel like it's too
much.

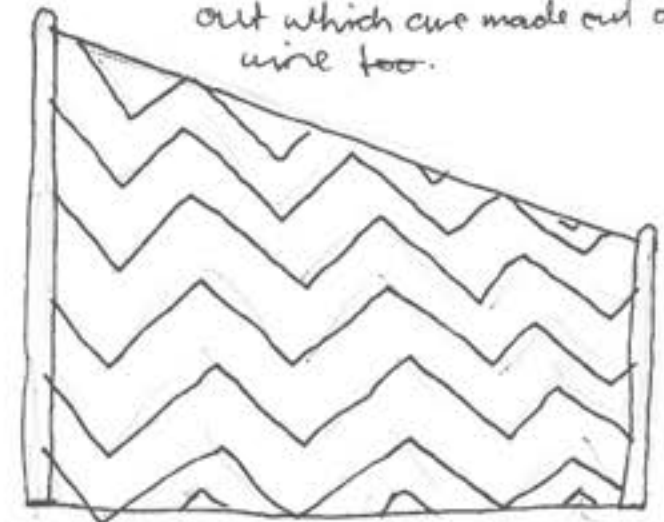

Development

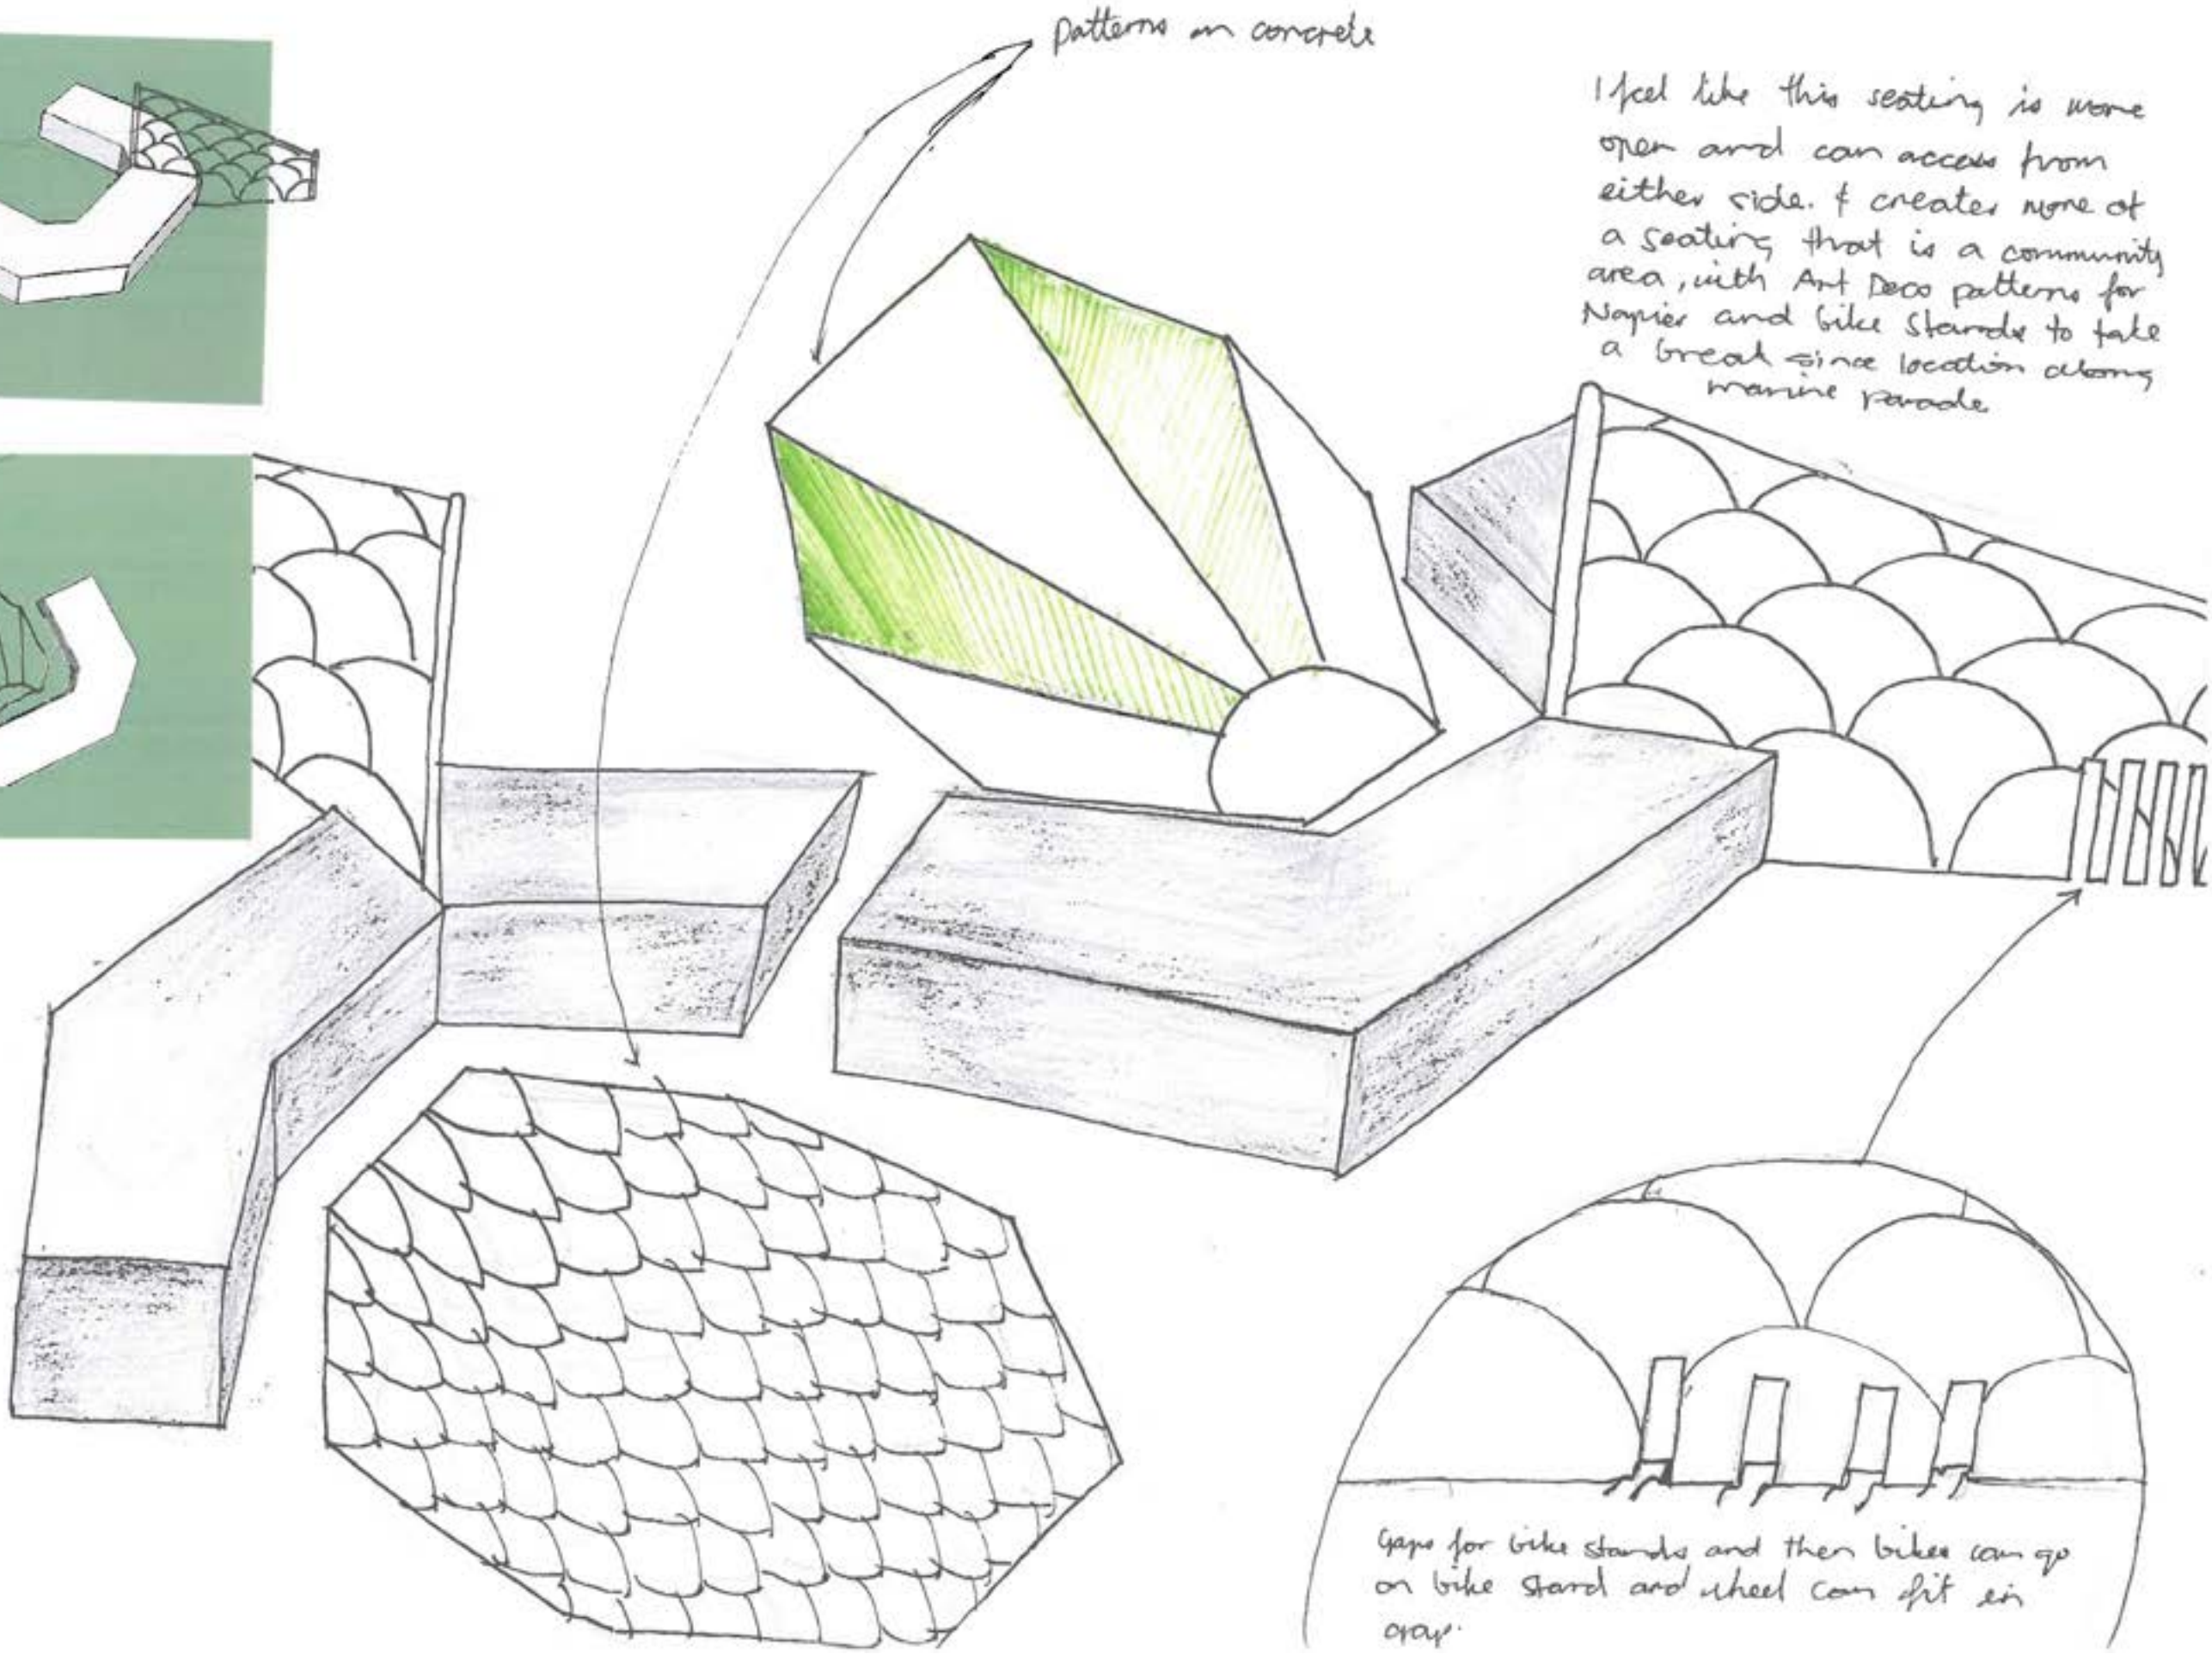

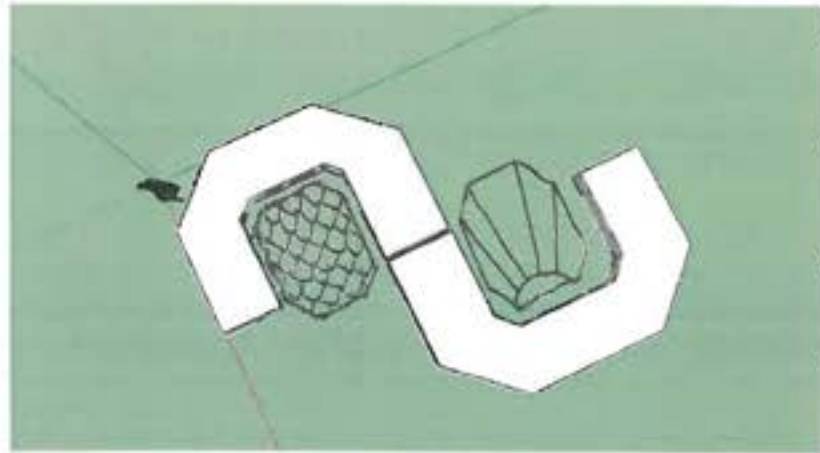

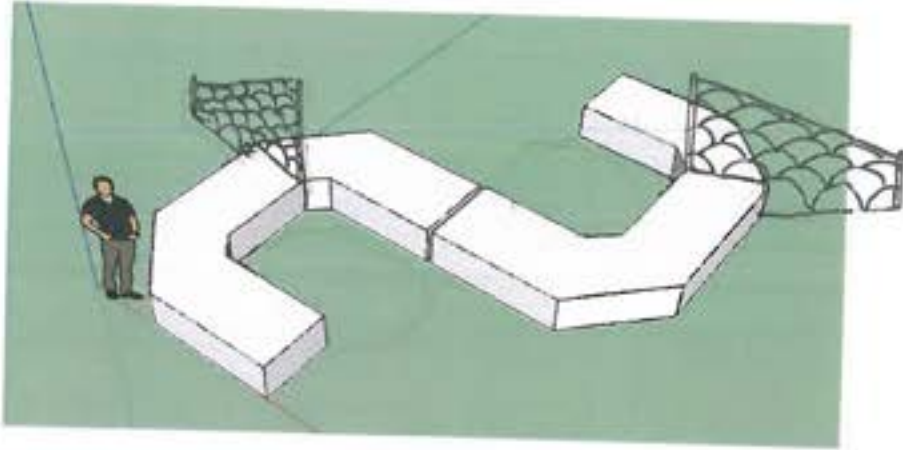

Development

I really like these two, the bottom one is more art deco and could be made out of wire fence and then the bike stands could come out which are made out of wire too.

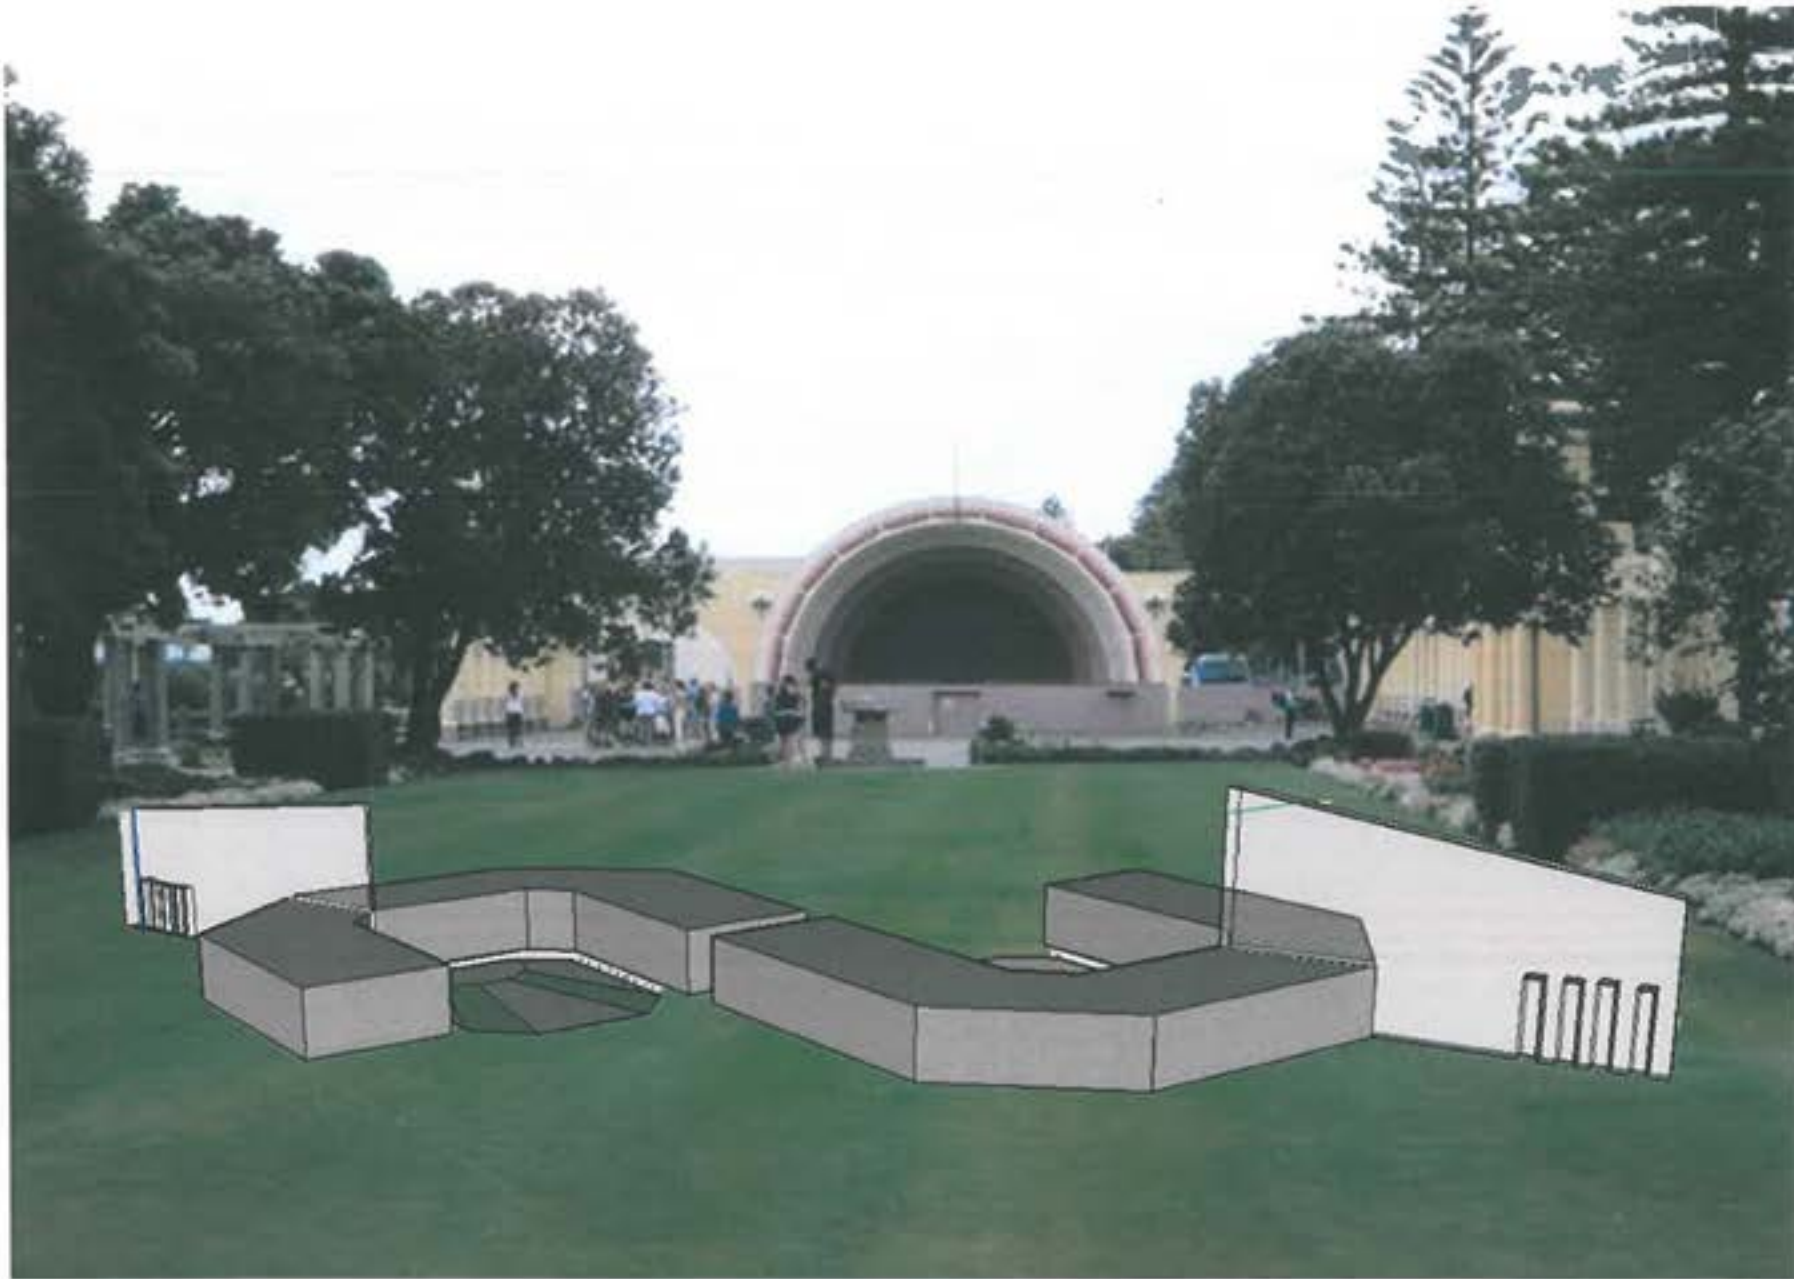

Development

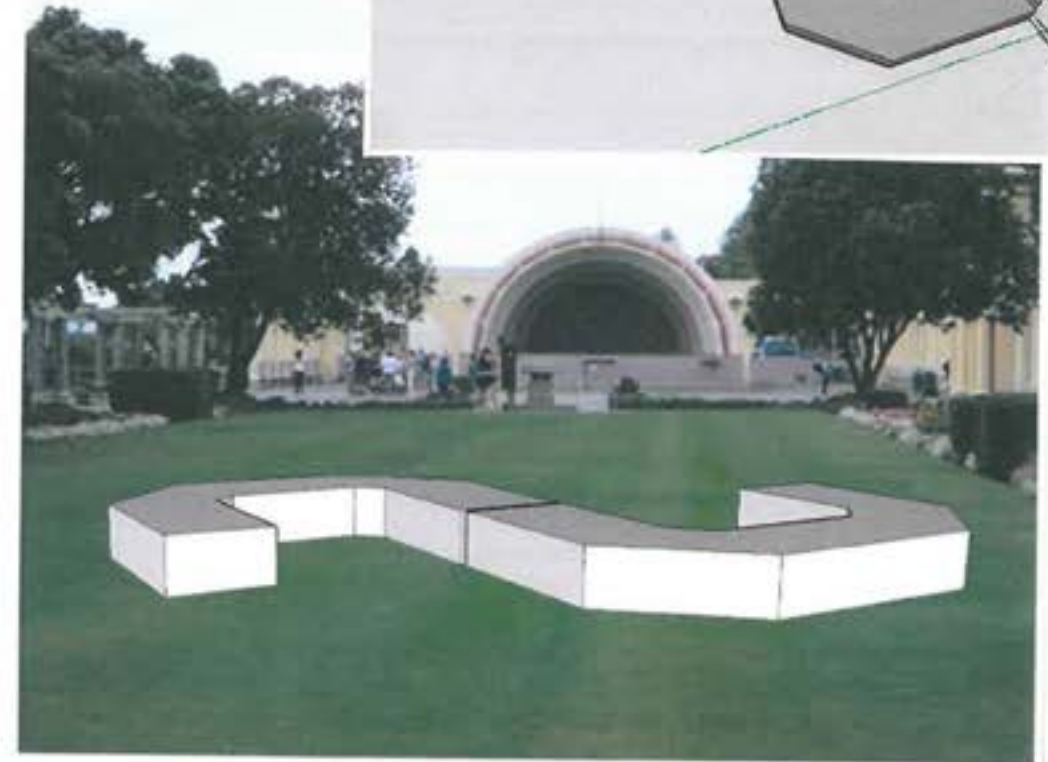

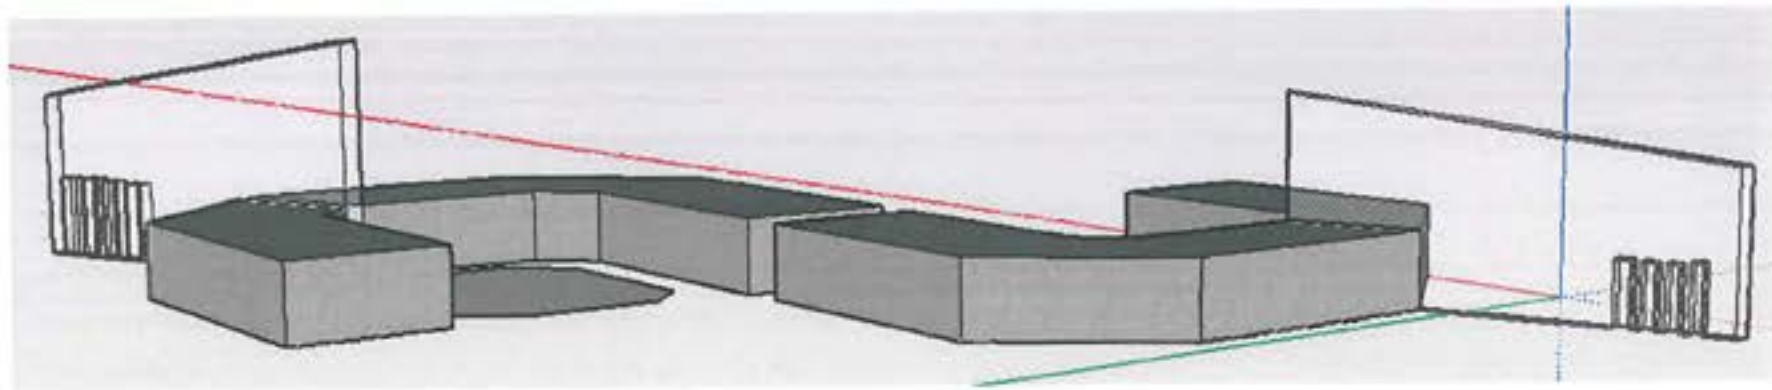

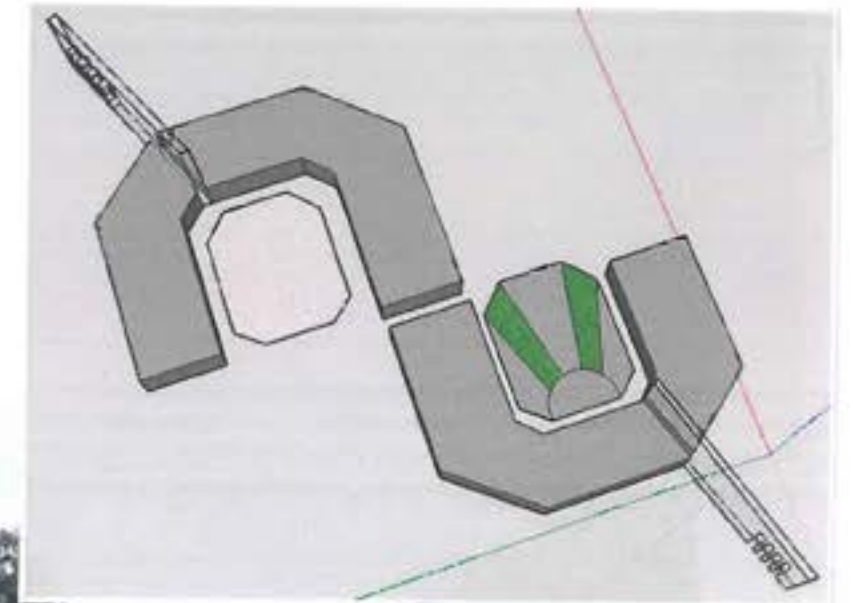

Gaps for bike stands and then bikes can go on bike stand and wheel can fit in gap.

Final Product

This design is a seating area with dividers which have bike stands combined in them. This seating could be located in Napier on the Marine Parade area as people could be biking and then have a rest put their bikes in the stand and have a seat. I would want it located in Napier because of the Art Deco surrounding. The seating is concrete to give it that simple, clean look. The patterns on the ground are Art Deco pattern and also on the dividers/ bike stand.

Art Deco Inspired Furniture

Commentary:

Vis Com – A
Des Ideas – M

There are some interesting ideas produced driven by the Art Deco inspiration to demonstrate the generation of divergent ideas. Visual Communication has some good aspects, and the combination of drawing and Sketch Up is a good idea, however, it is not executed that well. The work focuses more on the aesthetic aspects of the design but there is little information to give clarity to the functional aspects.

High Achieved.
