

Student 6 – High Not Achieved

Diagram 1: Interdependence between production sectors

**Part 1: Complete the following diagram**

You must complete a simple model (Diagram 1) that shows the interdependence of the primary producer sector and other producer sectors, referring to the Apple growing industry. You must include explanations of the interdependence of the Apple Producer Sector with the other producer sectors.

**Explain the nature of the interdependence between Apple Producers and Producer 1**

the orchard pickers rely on the apple producers to supply them with work and an income. The Apple producers rely on the orchard's pickers to pick all of the apples for them to sell to generate an income. Therefore the apple producers and ~~are~~ the pickers for the orchards are interdependent.

Producer 1:  
Name: orchard (pickers)  
primary Sector

Primary Sector:  
**Apple Producers**

**Explain the nature of the interdependence between Apple Producers and Producer 3**

The supermarkets rely on the apple producers to supply/provide the supermarkets with apples to sell. The apple producers rely on the supermarkets to purchase their apples to ~~make~~ make an income for the business. Therefore the apple producers and supermarkets are interdependent.

Producer 3:  
Name: supermarkets  
tertiary Sector

Producer 2:  
Name: transport  
tertiary Sector

**Explain the nature of the interdependence between Apple Producers and Producer 2**

The apple producers rely on the transport company to provide the service of transporting the apples to the clients of the apple producers. The transport company relies on the apple producers to ~~provide~~ provide them with business/work therefore the apple producers and the transport company are interdependent.

18

The impact of the world Trade Organisation's (WTO) apple export decision for **NZ apple producers would mean less import payments from overseas** because of Australia not being a part of the apple producers business (**because of the 89 year ban on NZ apple imports to Australia**). With no Australian clients there would be fewer exports overseas so less business and profit for NZ apple producers.

19

The flow-on effects of the WTO's decision on NZ apple producers means with fewer exports the apple producers would not have to produce as many apples resulting in fewer requirements for jobs. The producers would not need as many orchard workers to pick the apples, and the producers wouldn't have as many jobs for the transport company because they wouldn't need as many deliveries to export, also the producers wouldn't be **delivering any imports of apples to Australia** at all because of the ban but the supermarkets within the country and anywhere except Australia will still be receiving apples.
