

Achievement Standard

Subject Reference	Construction and Mechanical Technologies 3.20		
Title	Implement complex procedures to integrate parts using resistant materials to make a specified product		
Level	3	Credits	6
		Assessment	Internal
Subfield	Technology		
Domain	Construction and Mechanical Technologies		
Status	Registered	Status date	4 December 2012
Planned review date	31 December 2016	Date version published	4 December 2012

This achievement standard requires implementing complex procedures to integrate parts using resistant materials to make a specified product.

Achievement Criteria

Achievement	Achievement with Merit	Achievement with Excellence
<ul style="list-style-type: none"> Implement complex procedures to integrate parts using resistant materials to make a specified product. 	<ul style="list-style-type: none"> Skilfully implement complex procedures to integrate parts using resistant materials to make a specified product. 	<ul style="list-style-type: none"> Efficiently implement complex procedures to integrate parts using resistant materials to make a specified product.

Explanatory Notes

- This achievement standard is derived from Level 8 of the Technology learning area in *The New Zealand Curriculum*, Learning Media, Ministry of Education, 2007; and is related to the material in the *Teaching and Learning Guide for Technology*, Ministry of Education, 2012, at <http://seniorsecondary.tki.org.nz>.

Appropriate reference information is available in *Safety and Technology Education: A Guidance Manual for New Zealand Schools*, Ministry of Education, and the Health and Safety in Employment Act 1992.

Further information can be found at <http://www.technology.tki.org.nz/>.

- 2 *Implement complex procedures to integrate parts using resistant materials to make a specified product* involves:
- preparation of parts for integration
 - preparation of the integration environment
 - integrating parts to ensure product meets specifications
 - ongoing testing against reference points to reduce error in the integration of parts
 - undertaking preparation, integration and testing to comply with relevant health and safety regulations.
- Skilfully implement complex procedures using resistant materials to make a specified product* involves:
- showing independence and accuracy in undertaking procedures.
- Efficiently implement complex procedures using resistant materials to make a specified product* involves:
- undertaking procedures in a manner that economises time, effort and materials.
- 3 *Complex procedures* require the student to select and use a variety of techniques for the precise integration of parts.
- 4 *Resistant materials* in this standard may include but are not limited to: wood, composites, metal, alloys, ceramics, and plastics.
- 5 *Specified product* refers to a product with specifications that require the integration of parts to enable the product to function as intended. The specifications must be of sufficient rigour to allow the student to meet the standard. The specifications need to be agreed prior to the product being made. They may be teacher-given or developed in negotiation with the student.
- 6 Integration environment refers to the workspaces involved and may include: tools, equipment, and assembly aids.
- 7 Reference points may include but are not limited to: datum lines, centres, centrelines, prepared edges, and surfaces.
- 8 Conditions of Assessment related to this achievement standard can be found at <http://ncea.tki.org.nz/>.
-

Replacement Information

This achievement standard replaced unit standard 7531.

Quality Assurance

- 1 Providers and Industry Training Organisations must have been granted consent to assess by NZQA before they can register credits from assessment against achievement standards.
- 2 Organisations with consent to assess and Industry Training Organisations assessing against achievement standards must engage with the moderation system that applies to those achievement standards.
