### Explanatory Notes

- 1 This achievement standard is derived from Level 6 of *The New Zealand Curriculum*, Learning Media, Ministry of Education, 2007, and is related to the material in the *Teaching and Learning Guide for Mathematics and Statistics*, Ministry of Education, 2010 at <http://seniorsecondary.tki.org.nz>. The following achievement objectives, taken from the Number Strategies and Knowledge thread of the Mathematics and Statistics learning area, are related to this achievement standard:
  - reason with linear proportions
  - use prime numbers, common factors and multiples, and powers (including square roots)
  - understand operations on fractions, decimals, percentages, and integers
  - use rates and ratios
  - know commonly used fraction, decimal, and percentage conversions
  - know and apply standard form, significant figures, rounding, and decimal place value
  - apply direct and inverse relationships with linear proportion
  - extend powers to include integers and fractions
  - apply everyday compounding rates.

This standard is also derived from *Te Marautanga o Aotearoa*. For details of the *Marautanga* achievement objectives to which this standard relates, see the [Māori version](#) of the standard.

2 *Apply numeric reasoning* involves:

- selecting and using a range of methods in solving problems
- demonstrating knowledge of number concepts and terms
- communicating solutions which would usually require only one or two steps.

*Relational thinking* involves one or more of:

- selecting and carrying out a logical sequence of steps
- connecting different concepts and representations
- demonstrating understanding of concepts
- forming and using a model;

and also relating findings to a context, or communicating thinking using appropriate mathematical statements.

*Extended abstract thinking* involves one or more of:

- devising a strategy to investigate or solve a problem
- identifying relevant concepts in context
- developing a chain of logical reasoning, or proof
- forming a generalisation;

and also using correct mathematical statements, or communicating mathematical insight.

3 *Problems* are situations that provide opportunities to apply knowledge or understanding of mathematical concepts and methods. The situation will be set in a real-life or mathematical context.

4 The phrase ‘a range of methods’ indicates that evidence of the application of at least three different methods is required.

5 Students need to be familiar with methods related to:

- ratio and proportion
- factors, multiples, powers and roots
- integer and fractional powers applied to numbers
- fractions, decimals and percentages
- rates
- rounding with decimal places and significant figures
- standard form.
