Explanatory Notes

Version 2 of this achievement standard was republished to correct an error in the status date.

- 1 This achievement standard is derived from Level 6 of *The New Zealand Curriculum*, Learning Media, Ministry of Education, 2007, and is related to the material in the *Teaching and Learning Guide for Mathematics and Statistics*, Ministry of Education, 2010 at <http://seniorsecondary.tki.org.nz>. The following achievement objectives taken from the Shape thread of the Mathematics and Statistics learning area are related to this achievement standard:
 - deduce the angle properties of intersecting and parallel lines and the angle properties of polygons and apply these properties
 - recognise when shapes are similar and use proportional reasoning to find an unknown length
 - use trigonometric ratios and Pythagoras' theorem in two dimensions
 - deduce and apply the angle properties related to circles.

This standard is also derived from *Te Marautanga o Aotearoa*. For details of the *Marautanga* achievement objectives to which this standard relates, see the [Māori version](#) of the standard.

2 *Apply geometric reasoning* involves:

- selecting and using methods in solving problems
- demonstrating knowledge of geometrical concepts and terms
- communicating solutions which would usually require only one or two steps.

Relational thinking involves one or more of:

- selecting and carrying out a logical sequence of steps
- connecting different concepts and representations
- demonstrating understanding of concepts
- forming and using a model;

and also relating findings to a context, or communicating thinking using appropriate mathematical statements.

Extended abstract thinking involves one or more of:

- devising a strategy to investigate or solve a problem
- identifying relevant concepts in context
- developing a chain of logical reasoning, or proof
- forming a generalisation;

and also using correct mathematical statements, or communicating mathematical insight.

3 *Problems* are situations that provide opportunities to apply knowledge or understanding of mathematical concepts and methods. The situation will be set in a real-life or mathematical context.

4 Students need to be familiar with methods related to:

- Pythagoras' theorem
- trigonometric relationships in right-angled triangles
- similar triangles
- angle properties of intersecting and parallel lines
- angle properties of polygons
- angle properties of circles.
