Explanatory Notes

- 1 This achievement standard is derived from Level 6 of *The New Zealand Curriculum*, Learning Media, Ministry of Education, 2007, and is related to the material in the *Teaching and Learning Guide for Mathematics and Statistics*, Ministry of Education, 2010 at <http://seniorsecondary.tki.org.nz>. The following achievement objectives taken from the Shape and Measurement threads of the Mathematics and Statistics learning area are related to this achievement standard:
 - use trigonometric ratios and Pythagoras' theorem in two and three dimensions
 - recognise when shapes are similar and use proportional reasoning to find an unknown length
 - select and use appropriate metric units for length and area
 - measure at a level of precision appropriate to the task.

This standard is also derived from *Te Marautanga o Aotearoa*. For details of the *Marautanga* achievement objectives to which this standard relates, see the [Māori version](#) of the standard.

2 *Apply right-angled triangles* involves:

- selecting and using a range of methods in solving measurement problems
- demonstrating knowledge of measurement and geometric concepts and terms
- communicating solutions which would usually require only one or two steps.

Relational thinking involves one or more of:

- selecting and carrying out a logical sequence of steps
- connecting different concepts and representations
- demonstrating understanding of concepts
- forming and using a model;

and also relating findings to a context, or communicating thinking using appropriate mathematical statements.

Extended abstract thinking involves one or more of:

- devising a strategy to investigate or solve a problem
- identifying relevant concepts in context
- developing a chain of logical reasoning, or proof
- forming a generalisation;

and also using correct mathematical statements, or communicating mathematical insight.

3 *Problems* are situations set in a real-life context which provide opportunities to apply knowledge or understanding of mathematical concepts and methods. For assessment, situations may involve non right-angled triangles which can be divided into right-angled triangles.

4 The phrase ‘a range of methods’ indicates that evidence of the application of at least three different methods is required.

5 Students need to be familiar with methods related to:

- Pythagoras’ theorem
- trigonometric ratios (sine, cosine, tangent)
- similar shapes
- measuring at a level of precision appropriate to the task.
