<ul style="list-style-type: none"><li>Investigate bivariate numerical data using the statistical enquiry cycle.</li></ul>	<ul style="list-style-type: none"><li>Investigate bivariate numerical data using the statistical enquiry cycle with justification.</li></ul>	<ul style="list-style-type: none"><li>Investigate bivariate numerical data using the statistical enquiry cycle with statistical insight.</li></ul>

### Explanatory Notes

- 1 This achievement standard is derived from Level 6 of *The New Zealand Curriculum*, Learning Media, Ministry of Education, 2007, and is related to the material in the *Teaching and Learning Guide for Mathematics and Statistics*, Ministry of Education, 2010 at <http://seniorsecondary.tki.org.nz>. The achievement standard is aligned to the following achievement objectives taken from the Statistical Investigation thread of the Mathematics and Statistics learning area:
  - plan and conduct surveys and experiments using the statistical enquiry cycle
    - determining appropriate variables and measures
    - considering sources of variation
    - gathering and cleaning data
    - using multiple displays, and re-categorising data to find patterns and relationships, in multivariate data sets
    - presenting a report of findings;

- plan and conduct investigations using the statistical enquiry cycle:
  - justifying the variables and measures used
  - managing sources of variation including through the use of random sampling
  - identifying and communicating features in context (relationships between variables), using multiple displays
  - justifying findings, using displays and measures.

This standard is also derived from *Te Marautanga o Aotearoa*. For details of the *Marautanga* achievement objectives to which this standard relates, see the [Māori version](#) of the standard.

- 2 *Using the statistical enquiry cycle* involves using each component of the statistical enquiry cycle to investigate bivariate numerical data.

*Numerical data:*

The x variable or explanatory variable may be a continuous or discrete numerical variable.

The y-variable or response variable must be a numerical variable where the numbers measure the quantity of interest.

*Using the statistical enquiry cycle with justification* involves linking aspects of the statistical enquiry cycle to the context and making supporting statements which refer to evidence such as summary statistics, data values, trends or features of visual displays.

*Using the statistical enquiry cycle with statistical insight* involves integrating statistical and contextual knowledge throughout the statistical enquiry cycle, and may involve reflecting on the process or considering other explanations for the findings.

- 3 Students need to be familiar with using the statistical enquiry cycle to investigate bivariate numerical data, which involves:

- planning and conducting an investigation using bivariate numerical data
- working with a given relationship question
- determining appropriate variables and measures
- managing sources of variation
- gathering data
- selecting and using appropriate display(s)
- communicating relationship(s) in the data in a conclusion.

This achievement standard and AS91035 replaced unit standard 5240 and AS90193.

**Quality Assurance**

- 1 Providers and Industry Training Organisations must have been granted consent to assess by NZQA before they can register credits from assessment against achievement standards.
- 2 Organisations with consent to assess and Industry Training Organisations assessing against achievement standards must engage with the moderation system that applies to those achievement standards.
