SUPERVISOR'S USE ONLY

Level 1 Chemistry, 2015

90932 Demonstrate understanding of aspects of carbon chemistry

9.30 a.m. Tuesday 24 November 2015
Credits: Four

Achievement	Achievement with Merit	Achievement with Excellence
Demonstrate understanding of aspects of carbon chemistry.	Demonstrate in-depth understanding of aspects of carbon chemistry.	Demonstrate comprehensive understanding of aspects of carbon chemistry.

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

You should attempt ALL the questions in this booklet.

If you need more room for any answer, use the extra space provided at the back of this booklet and clearly number the question.

Check that this booklet has pages 2–10 in the correct order and that none of these pages is blank.

YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.

TOTAL

ASSESSOR'S USE ONLY

QUESTION ONE

- (a) Complete the table below by naming or drawing the structure of each organic compound.

Name	Structure
Methane	
Hexane	
	$ \begin{array}{c} \text{H} & & \text{H} \\ & & / \\ \text{H}-\text{C}-\text{C}=\text{C} \\ & & \backslash \\ \text{H} & \text{H} & \text{H} \end{array} $

- (b) Butane and propane are both used as fuel in camping burners. Propane has a boiling point of
- -42°C
- .

- (i) What state would propane be at room temperature (
- 18°C
-)?

- (ii) State whether the boiling point of butane will be higher or lower than propane.

Give a reason for your answer using your knowledge of the structure and properties of alkanes.

Boiling point of butane would be: **higher** **lower**
(circle correct answer)

Reason: _____

- (c) Camping burners usually have a warning notice instructing people to always use them in a well-ventilated place (plenty of oxygen) otherwise serious injury or death may occur.

Elaborate on why this warning is given on camping burners.

Use a burner that contains **propane** as an example.

In your answer, you should:

- state the type of combustion reaction that occurs when there is a shortage of oxygen
- describe the observations that may be seen if there was a shortage of oxygen, and link these to the reaction occurring
- explain two effects that the combustion products can have on human health when there is a shortage of oxygen
- write a word equation and a balanced symbol equation for the reaction occurring.

Balanced symbol equation:

QUESTION TWO

Crude oil, a mixture of many compounds, undergoes several processes to produce useful products. The diagram below shows three of the processes that may be involved.

- (a) (i) Give the name of each of the processes identified in the diagram above.

Process	Name of process
1	
2	
3	

- (ii) Explain how the structure of ethene allows it to undergo **Process 3**, to form polyethene.

(b) Dodecane, $C_{12}H_{26}$, can be reacted in **Process 2**, to form ethene and octane.

(i) State one condition that is needed during **Process 2**.

(ii) Complete the following symbol equation for the reaction of dodecane during **Process 2**.

Remember to balance the equation.

(c) Give a detailed account of **Process 1**, as shown in the diagram on the opposite page.

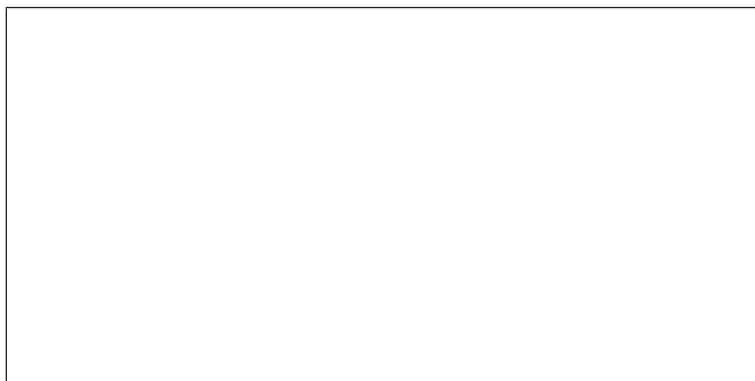

In your answer, you should:

- explain why **Process 1** is necessary
- elaborate on what occurs during **Process 1**, and link this to the structure and properties of the hydrocarbons in crude oil.
- name two products, other than dodecane, that are formed during **Process 1**.

QUESTION THREE

Alcohols, such as ethanol, are carbon compounds, but are not hydrocarbons like alkanes and alkenes.

- (a) (i) Draw the structural formula of ethanol in the box below.

- (ii) Explain why alcohols are not hydrocarbons, but alkanes and alkenes are.

- (iii) Describe how a sample of ethanol could be distinguished from a sample of octane using only water.

Explain how the physical properties of the compounds allow them to be identified in this way.

(b) One method of producing ethanol is by fermentation.

Explain how ethanol is produced by fermentation.

In your answer, you should:

- complete the following word equation and balanced symbol equation
- identify and elaborate on any conditions required for fermentation to occur.

Word equation:

glucose →

Balanced symbol equation:

$C_6H_{12}O_6$ →

- (c) Ethanol made from sugar cane can be mixed with petrol to produce a biofuel for cars.

Ethanol burns in air with an almost invisible flame, and has some useful advantages as a biofuel compared to some hydrocarbons found in petrol, such as heptane, C_7H_{16} .

Evaluate the use of ethanol in biofuels for cars.

www.renewablegreenenergypower.com/biofuel-101/

In your answer, you should:

- state the type of combustion reaction that ethanol usually undergoes, and name the products formed
- explain two effects that the combustion products of ethanol can have on the environment
- elaborate on the advantages of using ethanol as a biofuel compared to hydrocarbon fuels, such as those containing heptane
- include a balanced symbol equation for the combustion of ethanol.

Balanced symbol equation:
