NEW ZEALAND QUALIFICATIONS AUTHORITY
MANA TOHU MĀTAURANGA O AOTEAROA

QUALIFY FOR THE FUTURE WORLD
KIA NOHO TAKATŪ KI TŌ ĀMUA AO!

SUPERVISOR'S USE ONLY

Tohua tēnei pouaka mēnā
KĀORE koe i tuhituhi i
roto i tēnei pukapuka

Koiora, Kaupae 2, 2021

91156M Te whakaatu māramatanga ki ngā tukanga ora e pā ana ki te pūtau

Ngā whiwhinga: Whā

Paetae	Kaiaka	Kairangi
Te whakaatu māramatanga ki ngā tukanga ora e pā ana ki te pūtau.	Te whakaatu māramatanga hōhonu ki ngā tukanga ora e pā ana ki te pūtau.	Te whakaatu māramatanga matawhānui ki ngā tukanga ora e pā ana ki te pūtau.

Tirohia mēnā e rite ana te Tau Ākonga ā-Motu (NSN) kei runga i tō puka whakauru ki te tau kei runga i tēnei whārangi.

Me whakamātau koe i ngā tūmahi KATOA kei roto i tēnei pukapuka.

Ki te hiahia koe ki ētahi atu wāhi hei tuhituhi whakautu, whakamahia te wāhi wātea kei muri i te pukapuka nei.

Tirohia mēnā e tika ana te raupapatanga o ngā whārangi 2–17 kei roto i tēnei pukapuka, ka mutu, kāore tētahi o aua whārangi i te takoto kau.

Kaua e tuhi ki roto i tētahi wāhi kauruku whakahāngai (☒). Ka tapahia pea tēnei wāhi ina mākahia te pukapuka.

ME HOATU RAWA KOE I TĒNEI PUKAPUKA KI TE KAIWHAKAHARE Ā TE MUTUNGA O TE WHAKAMĀTAUTAU.

TŪMAHI TUATAHI: TE AHOTAKAKAME

- (a) Pā mai ai te ahotakakame i roto i ngā rau o ngā tipu.

Whakaahuahia te tukanga o te ahotakakame.

Source: www.sciencelearn.org.nz/events/928-thinking-like-a-vegetable-how-plants-decide-what-to-do

- (b) He whakaritenga hira te wai mō te tukanga o te ahotatakame.

Whakamāramahia mai he pēhea te uru o te wai ki tētahi tipu, Ā, he pēhea te whakamahi i roto i te tauhohenga ngoiaho¹.

¹ ā-tūrama

QUESTION ONE: PHOTOSYNTHESIS

- (a) Photosynthesis occurs in the leaves of plants.

Describe the process of photosynthesis.

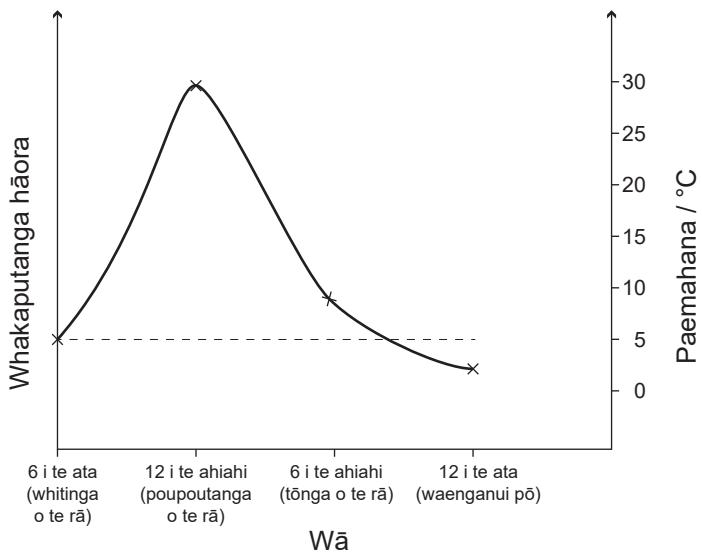

Source: www.sciencelearn.org.nz/events/928-thinking-like-a-vegetable-how-plants-decide-what-to-do

- (b) Water is an important requirement for the process of photosynthesis.

Explain how water enters a plant AND how it is used in the light-dependent reaction.

- (c) E whakaatu ana te hoahoa i raro i tētahi tipu whakapae i roto i te 18 haora te roa wā e whitikia ana e ngā kahaaho² noa rerekē o ia rā (arā, te piki haere o te kaha mai i te rā whiti ki te poupoutanga o te rā, me te heke haere o te kahaaho mai i te poupoutanga o te rā ki te tōnga o te rā).

Matapakitia ngā take he rerekē te whakaputa i te hāora puta noa i te rā.

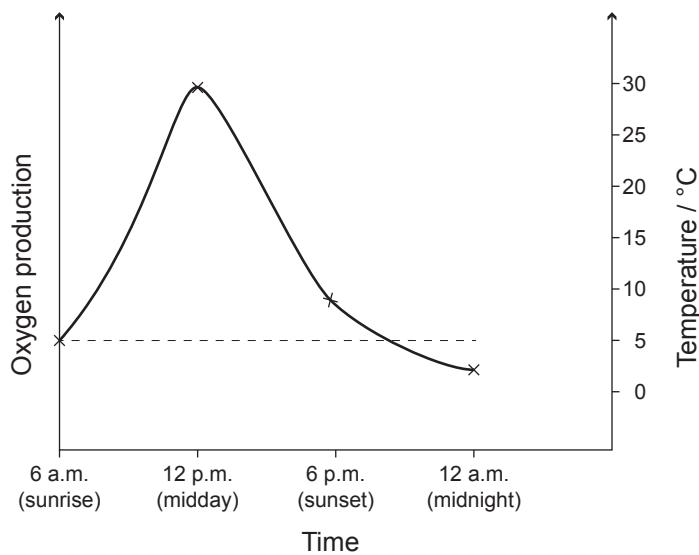

I tō tuhinga, me:

- whakamārama he aha e nui ake ai te whakaputa hāora i te poupoutanga o te rā, ā, he iti iho i waenganui pō
 - whakamārama he aha e rerekē ai te whakaputa hāora i te 6 i te ata me te 6 i te ahiahi, ahakoa he ūrite te kahaaho i ēnei wā
 - matapaki he pēhea te whai pānga o te kahaaho, te paemahana, me tētahi atu āhuatanga KOTAHİ i te whakaputa hāora.

mō tēnei tūmahī kei ngā
whārangī o muri mai.*

² kaha tūrama

- (c) The diagram below shows a hypothetical plant over an 18-hour period where it is exposed to normal daily light intensity variation (i.e. increasing intensity from sunrise to midday, and decreasing intensity from midday to sunset).

Discuss reasons why the production of oxygen varies throughout the day.

In your answer:

- explain why oxygen production is highest at midday and lowest at midnight
 - explain why oxygen production is different at 6 a.m. and 6 p.m., even though light intensity is the same at these times
 - discuss how light intensity, temperature, and ONE other factor affect oxygen production.

TŪMAHI TUARUA: TE TUKUPŪNGAO PŪTAU

- (a) Pā mai ai te tukupūngao a te pūtau i roto i ngā pata pūngao.

Tapaina ēnei hanganga e whai ake ki te hoahoa pata pūngao i raro nei:
te kiriuhī o waho, te kiriuhī o roto, te anga ā-roto (matrix), me te apa ā-roto (crista).

He mea urutau mai: www.sciencephoto.com/media/634423/view/mitochondrion-tem

- (b) Ko te mako, *Isurus oxyrinchus*, tētahi o ngā ika konihī tere rawa i te ao. Ina hopu pārure ana, he 74 km h⁻¹ te tere ka taea e ngā mako te kau mō ngā wā poto.

Matapakitia te wāhi me te wā e pā mai ai te tukupūngao hāora-kore me te tukupūngao ā-hāora i roto i te mako.

I tō tuhinga, me:

- whakamārama te tukupūngao hāora-kore me te tukupūngao ā-hāora i roto i ngā pūtau o te mako, Ā, ka tautohu kei hea e pā mai ana ia momo tukupūngao i roto i te pūtau kīrehe
- whakamārama he aha te take he poto noa iho ngā wā e taea ana e te mako te whakatutuki te tukupūngao hāora-kore
- matapaki ngā painga me ngā kino o te mako e whakahaere ana i te tukupūngao hāora-kore me te tukupūngao ā-hāora.

*He wāhi anō mō tō tuhinga
mō tēnei tūmahī kei ngā
whārangī o muri mai.*

QUESTION TWO: CELL RESPIRATION

- (a) Cell respiration takes place in the mitochondria.

Label the following structures on the mitochondrion diagram below:
outer membrane, inner membrane, matrix, and crista.

Adapted from: www.sciencephoto.com/media/634423/view/mitochondrion-tem

- (b) The shortfin mako shark, *Isurus oxyrinchus*, is one of the fastest predatory fish in the world. When catching prey, it can swim at speeds up to 74 km h^{-1} for short periods of time.

Discuss where and when anaerobic and aerobic respiration occur in the mako shark.

In your answer:

- explain anaerobic respiration and aerobic respiration in the mako shark's cells AND identify where each type of respiration occurs in an animal cell
- explain why the mako shark can only carry out anaerobic respiration for short periods of time
- discuss the advantages and disadvantages of the mako shark carrying out both anaerobic and aerobic respiration.

*There is more space for
your answer to this question
on the following pages.*

TŪMAHI TUATORU: TE NEKENEKE MATŪ

He ika moana te rāwaru, *Parapercis colias*, e noho ana i te wai tai. He rerekē te kukūtanga wai o ngā pūtau o te rāwaru i tō te wai tai e pae ana.

<p>Ka inu ngā ika moana i te wai tai hei whakakapi i te wai ka ngaro i te rerewai.</p>	<p>Ka ngaro te wai mā te rerewai mā ngā pūtau pihapiha me te kiri.</p>
<p>Ka whakamahia e ngā ika moana te ikiiki ngangahu hei papī Na^+ me te Cl^- mā ngā pūtau pihapiha.</p>	<p>He tata ki te 96.5% wai te wai tai me te 3.5% matūmeha pērā i te Na^+ me te Cl^-.</p>

He mea urutau mai: [https://en.wikipedia.org/wiki/Blue_cod#/media/File:Parapercis_colias_\(Blue_cod\).jpg](https://en.wikipedia.org/wiki/Blue_cod#/media/File:Parapercis_colias_(Blue_cod).jpg)

Whakamahia ngā mōhiohio māmā i runga ake hei matapaki he pēhea te rerekē o te kukūtanga wai i roto i ngā pūtau o te rāwaru i te wai tai e pae ana.

I tō tuhinga, me:

- whakamārama tēnei mea te rerewai, ā, he aha e pā mai ai i waenga i te ika me te wai tai
 - whakamārama te kawenga hohe, ā, he aha e pā mai ai i waenga i ngā pūtau pihapiha me te wai tai
 - matapaki he aha te take me mātua inu wai tai te rāwaru, ā, me te whakakore atu anō i te Na^+ me te Cl^- mai i tōna tinana.

mō tēnei tūmahī kei ngā
whārangī o muri mai.*

QUESTION THREE: MOVEMENT OF MATERIALS

Rāwaru or blue cod, *Parapercis colias*, is a marine fish that lives in saltwater. Rāwaru cells maintain a water concentration that is different from the surrounding seawater.

Marine fish drink seawater to replace water lost by osmosis.		Water is lost by osmosis through the gill and skin cells.
Marine fish use active transport to excrete Na^+ and Cl^- through the gill cells.		Seawater is made up of about 96.5% water and 3.5% solutes such as Na^+ and Cl^- .

Adapted from: [https://en.wikipedia.org/wiki/Blue_cod#/media/File:Parapercis_colias_\(Blue_cod\).jpg](https://en.wikipedia.org/wiki/Blue_cod#/media/File:Parapercis_colias_(Blue_cod).jpg)

Use the simplified information above to discuss how rāwaru maintain a water concentration inside their cells that is different from the surrounding seawater.

In your answer:

- explain osmosis and why it occurs between the fish and seawater
 - explain active transport and why it occurs between the gill cells and seawater
 - discuss why the rāwaru must drink seawater, but also actively remove Na^+ and Cl^- from its body.

There is more space for your answer to this question on the following pages.

**He whārangi anō ki te hiahiatia.
Tuhia te (ngā) tau tūmahi mēnā e tika ana.**

**Extra space if required.
Write the question number(s) if applicable.**

QUESTION
NUMBER

English translation of the wording on the front cover

91156M

Level 2 Biology 2021

91156M Demonstrate understanding of life processes at the cellular level

Credits: Four

Achievement	Achievement with Merit	Achievement with Excellence
Demonstrate understanding of life processes at the cellular level.	Demonstrate in-depth understanding of life processes at the cellular level.	Demonstrate comprehensive understanding of life processes at the cellular level.

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

You should attempt ALL the questions in this booklet.

If you need more room for any answer, use the extra space provided at the back of this booklet.

Check that this booklet has pages 2–17 in the correct order and that none of these pages is blank.

Do not write in any cross-hatched area (☒). This area may be cut off when the booklet is marked.

YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.
