91578 Apply differentiation methods in solving problems

2.00 p.m. Wednesday 25 November 2015
Credits: Six

Achievement	Achievement with Merit	Achievement with Excellence
Apply differentiation methods in solving problems.	Apply differentiation methods, using relational thinking, in solving problems.	Apply differentiation methods, using extended abstract thinking, in solving problems.

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

You should attempt ALL the questions in this booklet.

Show ALL working.

Make sure that you have the Formulae and Tables Booklet L3–CALCF.

If you need more space for any answer, use the page(s) provided at the back of this booklet and clearly number the question.

Check that this booklet has pages 2–12 in the correct order and that none of these pages is blank.

YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.

Not Achieved

TOTAL 7

ASSESSOR'S USE ONLY

QUESTION ONE

(a) Differentiate $y = 6\tan(5x)$.

$y' = 5\sec^2(5x)$

(b) Find the gradient of the tangent to the function $y = (4x - 3x^2)^3$ at the point (1,1).

You must use calculus and show any derivatives that you need to find when solving this problem.

let $u = 4x - 3x^2$ $\quad \frac{du}{dx} = 4 - 6x \quad y = u^3 \quad \frac{dy}{du} = 3u^2$

$\frac{dy}{dx} = (4-6x) \times 3u^2$

$= (4-6x) \times 3(4x-3x^2)^2$

when $x=1$

$\frac{dy}{dx} = (4-6(1)) \times 3(4(1)-3(1)^2)^2 = -6$

$y - y_1 = m(x - x_1)$

$y - 1 = -6x - -6$

$y = -6x + 7$

(c) Find the values of x for which the function $f(x) = 8x - 3 + \frac{2}{x+1}$ is increasing.

You must use calculus and show any derivatives that you need to find when solving this problem.

$f(x) = 8x - 3 + \frac{2}{1} \times \frac{1}{x}$

$= 8x - 3 + 2 \times x^{-1}$

$f'(x) = 8 + 2 \times -x^{-2}$

$x = 0.5$

ASSESSOR'S USE ONLY

(d) For what value(s) of x is the tangent to the graph of the function $f(x)=\dfrac{x+4}{x(x-5)}$ parallel to the x-axis?

ASSESSOR'S USE ONLY

You must use calculus and show any derivatives that you need to find when solving this problem.

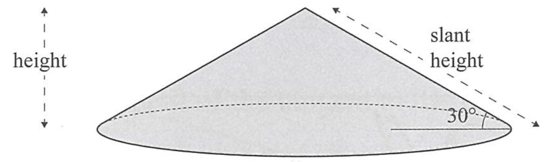
$u = x+4 \quad u' = 1 \quad v = x(x-5) \quad v' = x^2 - 5x$

$f'(x)$

$y' = u'v - uv' / v^2$

$$f'(x) = \frac{1.x(x-5) - (x+4).(x^2 - 5x)}{(x(x-5))^2}$$

(e) Salt harvested at the Grassmere Saltworks forms a cone as it falls from a conveyor belt. The slant of the cone forms an angle of 30° with the horizontal. The conveyor belt delivers the salt at a rate of 2 m^3 of salt per minute.



https://bronzblog.files.wordpress.com/2013/07/imgp1182.jpg

Find the rate at which the slant height is increasing when the radius of the cone is 10 m.

You must use calculus and show any derivatives that you need to find when solving this problem.

ASSESSOR'S USE ONLY

N2

QUESTION TWO

(a) Differentiate $f(x)=\sqrt[5]{x-3x^2}$.

$f(x) = ((x-3x)^2)^{1/5} = (x-3x)^{2/5}$

let $u = x-3x^2$ $\quad \frac{du}{dx} = 1-6x$ $\quad f(x) = u^{2/5}$ $\quad \cancel{f'5}\ \frac{dy}{dx} = \frac{2}{5}u^{-3/5}$

$f'(x) = (1-6x)\times\frac{2}{5}u^{-3/5}$

$= (1-6x)\times\frac{2}{5}(x-3x^2)^{-3/5}$

(b) Find the gradient of the normal to the curve $y=x-\frac{16}{x}$ at the point where $x=4$.

You must use calculus and show any derivatives that you need to find when solving this problem.

$y = x - 16\times\frac{1}{x}$ $\quad M_N = \frac{-1}{M_T}$

$= x - 16\times x^{-1}$

$y' = 1 - 16\times -x^{-2}$

when $x=4$ $\quad \frac{dy}{dx} = 1 - 16\times(4)^{-2}$ $\quad y = (4) - \frac{16}{(4)}$

$= 0$ $\quad = 0$

~~$y-y_1=m(x-x_1)$~~ $\quad M_N = \frac{-1}{0}$ $\quad = -1$

~~$y-0=0(x-4)$~~

~~$y=$~~

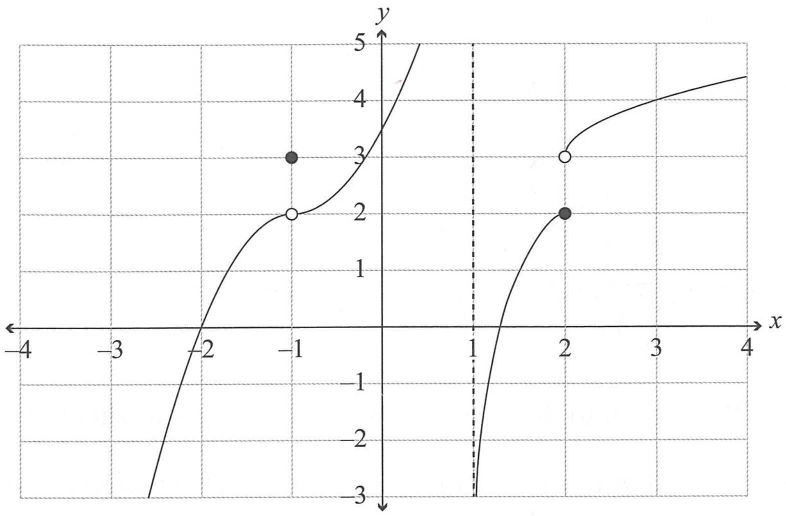
~~$y=mx+c$~~

~~$y=0x+c$~~

~~$y=0+c$~~

ASSESSOR'S USE ONLY

(c) The graph below shows the function $y = f(x)$.



For the function above:

(i) Find the value(s) of x that meet the following conditions:

1. $f(x)$ is not defined: 1

2. $f(x)$ is not differentiable: 1, 2

3. $f''(x) > 0$: $-1 < x < 1$, $x < 2$

(ii) What is the value of $f(-1)$? 3

State clearly if the value does not exist.

(iii) What is the value of $\lim_{x \to 2} f(x)$? no limit

State clearly if the value does not exist.

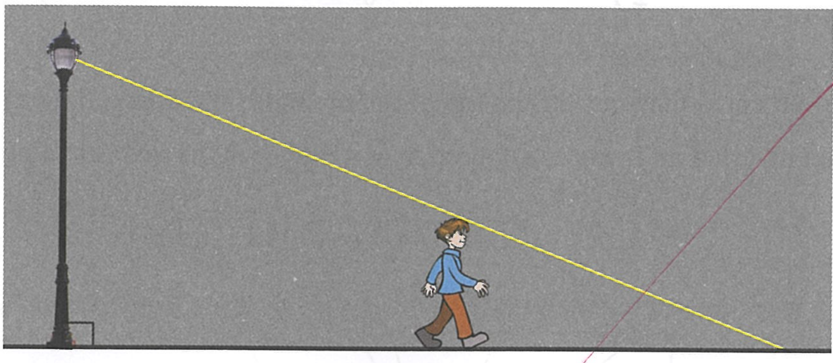
U

(d) A street light is 5 m above the ground, which is flat.

A boy, who is 1.5 m tall, is walking away from the point directly below the streetlight at 2 metres per second.

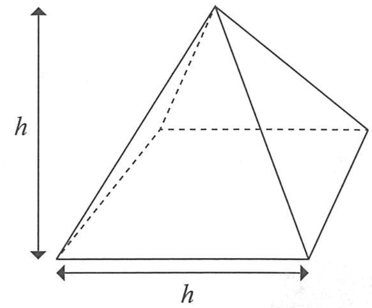
At what rate is the length of his shadow changing when the boy is 8 m away from the point directly under the light?

You must use calculus and show any derivatives that you need to find when solving this problem.



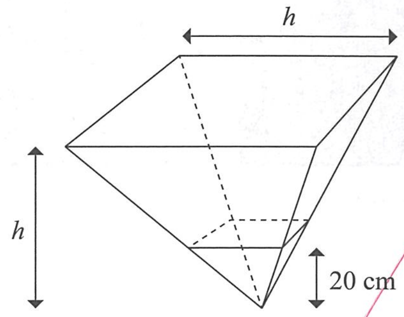
ASSESSOR'S USE ONLY

(e) A water container is constructed in the shape of a square-based pyramid. The height of the pyramid is the same as the length of each side of its base.



A vertical height of 20 cm is then cut off the top of the pyramid, and a new flat top added.

The pyramid is then inverted and water is poured in at a rate of 3000 cm^3 per minute.



Find the rate at which the surface area of the water is increasing when the depth of the water is 15 cm.

$$\text{Volume of pyramid} = \frac{1}{3} \times \text{base area} \times \text{height}$$

You must use calculus and show any derivatives that you need to find when solving this problem.

ASSESSOR'S USE ONLY

N2

QUESTION THREE

ASSESSOR'S USE ONLY

(a) For what value(s) of x does the tangent to the graph of the function $f(x) = 5\ln(2x - 3)$ have a gradient of 4?

You must use calculus and show any derivatives that you need to find when solving this problem.

$f'(x) = \frac{10}{2x-3}$

$4 = \frac{10}{2x-3}$

$8x - 12 = 10$

$8x = 22$

$x = 2.75$

u

(b) If $f(x) = \frac{x}{e^{3x}}$, find the value(s) of x such that $f'(x) = 0$.

You must use calculus and show any derivatives that you need to find when solving this problem.

$u = x \quad u' = 1 \quad v = e^{3x} \quad v' = 3e^{3x}$

$f'(x) = u'v - uv' / v^2$

$= \frac{1 . e^{3x} - x . 3e^{3x}}{(e^{3x})^2}$

$0 = 1 . e^{3x} - x . 3e^{3x}$

$x = \frac{1}{3}$

u

(c) A curve is defined parametrically by the equations $x = 3\cos t$ and $y = \sin 3t$.

Find the gradient of the normal to the curve at the point where $t = \frac{\pi}{4}$.

You must use calculus and show any derivatives that you need to find when solving this problem.

$\frac{dx}{dt} = -3t\sin(t) \quad \frac{dt}{dx} = \frac{1}{3t\sin t} \quad \frac{dy}{dt} = 3\cos(3t)$

$\frac{dy}{dx} = \frac{dy}{dt} \cdot \frac{dt}{dx}$

$= 3\cos(3t) \times \frac{1}{3t\sin(t)}$

$= \frac{3\cos(3t)}{3t\sin(t)}$

when $t = \frac{\pi}{4}$ $\frac{dy}{dx} = \frac{3\cos(3 \times \pi/4)}{3(\frac{\pi}{4})\sin(\pi/4)} = -1.27$

$M_N = \frac{-1}{-1.27}$

ASSESSOR'S USE ONLY

(d) The equation of motion of a particle is given by the differential equation

$$\frac{d^2x}{dt^2} = -k^2x$$

where x is the displacement of the particle from the origin at time t, and k is a positive constant.

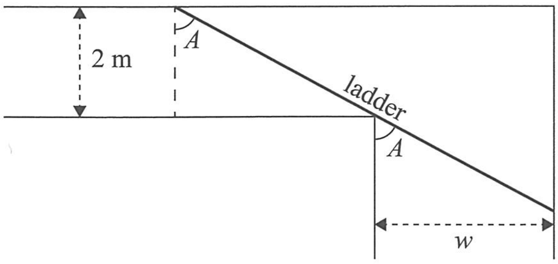
(i) Show that $x = A\cos kt + B\sin kt$, where A and B are constants, is a solution of the equation of motion.

(ii) The particle was initially at the origin and moving with velocity 2k.

Find the values of A and B in the solution $x = A\cos kt + B\sin kt$.

(e) A corridor is 2 m wide.

At the end it turns 90° into another corridor.



What is the minimum width, w, of the second corridor if a ladder of length 5 m can be carried horizontally around the corner?

You must use calculus and show any derivatives that you need to find when solving this problem.

Annotated Exemplar Template

Not Achieved exemplar for 91578 2015		Total score	07
Q	**Grade score**	**Annotation**	
1	N2	The candidate applied the chain rule correctly in 1b but not in 1a. The candidate did not apply the quotient rule correctly in 1d and made algebraic errors in the rearrangement of the function in 1c.	
2	N2	The candidate made algebraic errors in the rearrangement of the function in 2a and algebraic errors in attempting to solve 2b. The candidate demonstrated some knowledge of the properties of graphs (limits, differentiability, continuity, concavity).	
3	A3	The candidate was able to use the chain rule and the quotient rule to solve 3a and 3b. The candidate incorrectly applied the chain rule in attempting to differentiated one of the pair of parametric equations.
