## Level 2 Agricultural and Horticultural Science 2023

$$
\begin{aligned}
& 91294 \text { Demonstrate understanding of how NZ } \\
& \text { commercial management practices influence } \\
& \text { livestock growth and development }
\end{aligned}
$$

Credits: Four

| Achievement | Achievement with Merit | Achievement with Excellence |
| :--- | :--- | :--- |
| Demonstrate understanding of how <br> management practices influence <br> livestock growth and development in <br> commercial production in New Zealand. | Demonstrate in-depth understanding of <br> how management practices influence <br> livestock growth and development in <br> commercial production in New Zealand. | Demonstrate comprehensive <br> understanding of how management <br> practices influence livestock growth and <br> development in commercial production <br> in New Zealand. |

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

## You should attempt ALL the questions in this booklet.

If you need more room for any answer, use the extra space provided at the back of this booklet.
Check that this booklet has pages 2-12 in the correct order and that none of these pages is blank.
Do not write in any cross-hatched area (

## YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.

## INSTRUCTIONS

You are required to discuss THREE livestock species of your choice.
BEFORE choosing livestock, carefully read ALL the questions to ensure your selections will allow you to meet all the requirements.

QUESTION ONE: Livestock development and feeding
Throughout their life stages, livestock require different types of feed as they grow and develop.

Select your livestock for this question. The livestock you select for this question must be different to those you select for questions Two and Three.

Livestock for Question One: Cattle
(a) How do the growth and development of your chosen livestock change from birth through to the harvest of products? Provide details of the main factors that drive these changes.
When a cow is first boo they will frost devdop this bares and occas and the slanly develop this musts: From birth to the harvest of products has different stages the first being when they have just been boon carol are devebping their kens an aliens so so they drink their inothers milk intill they have developed, their avens to a certain point uncle they dost need milk ac mare and can pracaraume grass and cher types of feed. Once they have dueloped and graven their bees and cleans, they then sort to develop and grow their muscles and size. Once that is dore they stent to increase
wither size with got. But when its time to honest the product you med to find the best time in their growth where they have the weight amamount of fat an their body.

4
(b) Evaluate how growers adapt their practices to match seasonal changes in feed supply to ensure growth and development are not compromised.

In your answer consider the impact on the economics of production and timing.
Formers change cortes feed to match the seasonal dangers. So the the animals get the sere energy. During winter formers will feed cattle baits to ensure that the orinals get mere energy so That they continue to grow and anat winy all of their energy to $g$ stay warm and sop shivering, so formers increase their feed which increases their energy so they can stay warm but also conative to grow and develop. And in summer fumes give cattle just grass and water just the right amount of teed so they can still grow and develop without aver feeding the animals. Driving the Itfferent seasons the former wiI' give the cattle different feed sa the cattle can continue to glam and develop. In winter former also might break fed which restricts how much the cattle eat so that all the feed lat all through winter.

QUESTION TWO: Livestock health
To ensure that livestock are able to reach their potential for growth and development, producers must carry out animal health practices throughout the life of the livestock.

Select your livestock for this question. The livestock you select for this question must be different to those you select for questions One and Three.

Livestock for Question Two: shelf
Select your health practice for your chosen livestock.

Health practice: Prencling
(a) How does this animal health practice have a positive impact on the growth and development of your chosen livestock?
Perching hus an positive impent on growth and development because it gods id of internal poccoritos which fate the nuteinte out of the food the wimal eats, internal parasites attach thementf to the crionds small interaimes and eats all ot the goal ratings at of the aims food that it dispstel. Dearching con prevent there intracl parasites from talking all al the reateads by gating at of then, Hugh Because the Internal pastes take all of the good nuteonts the animal mill not grow or devebp because it horotygot an onecy form the nutreists. And lateral pecesitos could make the animal fed sick and not wont to cad And if the coronal hes no eneog it mill moe less to gat food to eat so it wait darlop or grow. Sc drenching has an positive impact on growth and development.
(b) Evaluate the effectiveness of this health practice by explaining how the improvements in growth and development impact the quality of the products and the economics of production.
pleating is a cffativ heath practice bocurso it you didst drench your sheep would be small and sting because they crest growing and devolving so, because the internal parasites acre taking the all of the steeps rectrients so it hasi't got any energy to grow end develop. When a sheep has been drenched it will start to grow and develop tater then a Angeyulow which haunt been drenched, because the sheep which has been drenched is gating nutrients which hips it to gov and develop which impacts the quality of the product because it will yo to got slaughtered fast in its life cydo and it will have more meat/musde and will have lat. The sheep that habit been drank will take a binger time to get slaughter as it thasn't grown any meat louse one dat so it unild be a vasto of money sending it to the get slaifinter because it hasitget get any on ment/murde on it so it haspit developed or grown to its full potincial.

QUESTION THREE: Breeding practices
The breeding practices chosen by livestock producers can have an important impact on the growth and development of the resulting offspring.

Select your livestock for this question. The livestock you select for this question must be different to those you select for questions One and Two.

Livestock for Question Three: Horse
Select a breeding practice for your chosen livestock.

Breeding practice: Actifled incemadien
(a) How does this breeding practice impact the growth and development of the offspring that result from this practice?
Artitical insemination in hoses en cen impact the gouth and developed of the offering. A former or berber will we aditical insemindiren because thy wont to impecave certain cherateritios which are se fer racing. The throwyblbad horse is used for racing so they have to be feed fed well to help the have develop its murder fat beans the laces hos fo carry a jock wite spiriting, the whole ace. Artificial insemination is used to make the Offspring have better checoderistios then the mother so it will be fader and stoner.
(b) Evaluate the use of this breeding practice in terms of growth and development by comparing it with an alternative breeding practice.

In your answer discuss the impacts on the quality and quantity of livestock produced from these practices.

## Merit

Subject: Agricultural and Horticultural Science
Standard: 91294
Total score: 17

| Q | Grade <br> score | Marker commentary |
| :---: | :---: | :--- |
| One | M6 | The candidate explained details of the body systems that develop through the <br> livestock's lifecycle and articulated the change of feed with seasonal <br> variations in some detail. |
| Two | M6 | The candidate established a clear link between the actions of the parasites <br> and the impact this has on growth and development. |
| Three | M5 | The candidate explained what characteristics would be selected for artificial <br> insemination with links to the growth and development of horses. |
