## Level 1 Mathematics and Statistics 2025

### 91947 Demonstrate mathematical reasoning

Credits: Five

Achievement	Achievement with Merit	Achievement with Excellence
Demonstrate mathematical reasoning.	Demonstrate mathematical reasoning with relational thinking.	Demonstrate mathematical reasoning with extended abstract thinking.

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

**You should attempt ALL the questions in this booklet.**

Pull out Resource Booklet 91947R from the centre of this booklet.

Show ALL working.

If you need more room for any answer, use the extra space provided at the back of this booklet.

Check that this booklet has pages 2–16 in the correct order and that none of these pages is blank.

Do not write in the margins (▨▨▨▨). This area will be cut off when the booklet is marked.

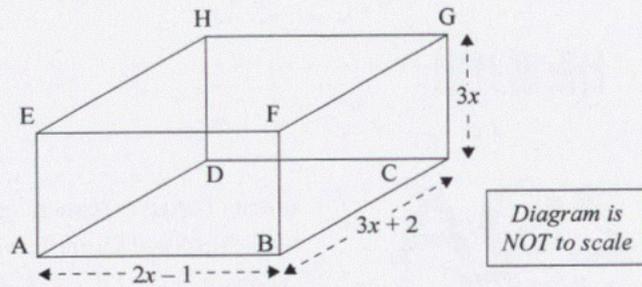

**YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.**

Excellence

TOTAL 24

## QUESTION ONE

- (a) The diagram below shows a cuboid.

Find the **total surface area** of this box, given that  $x = 7$ .

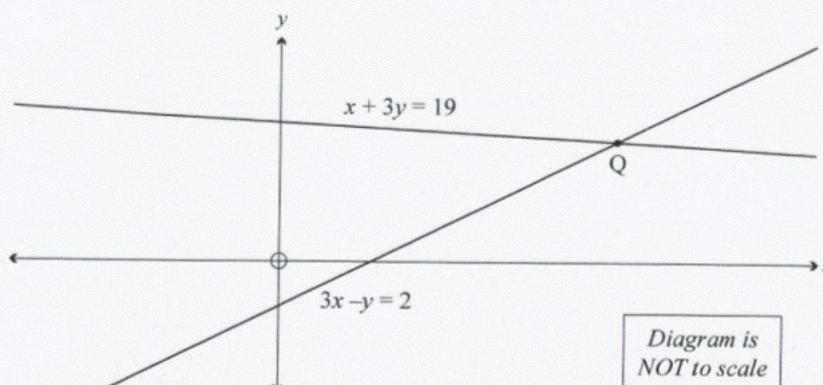

$$AB = 2 \times 7 - 1 = 13 \quad BC = 3 \times 7 + 2 = 23 \quad GC = 3 \times 7 = 21$$

$$\begin{aligned} \text{Surface Area} &= 2(13 \times 21) + 2(23 \times 21) + 2(13 \times 23) \\ &= 546 + 966 + 598 \\ &= 2110 \end{aligned}$$

- (b) The graph below shows two straight lines with equations:

$$3x - y = 2 \text{ and } x + 3y = 19$$

The lines intersect at the point Q.

Find the coordinates of the point Q, using an **algebraic** method.

Clearly show all steps of your working.

$$3x - y = 2$$

$$y = 3x - 2$$

$$x + 3y = 19$$

$$3y = 19 - x$$

$$y = \frac{19 - x}{3}$$

$$3x - 2 = \frac{19 - x}{3}$$

$$9x - 6 = 19 - x$$

$$10x = 25$$

$$x = 2.5$$

$$y = 3 \times 2.5 - 2$$

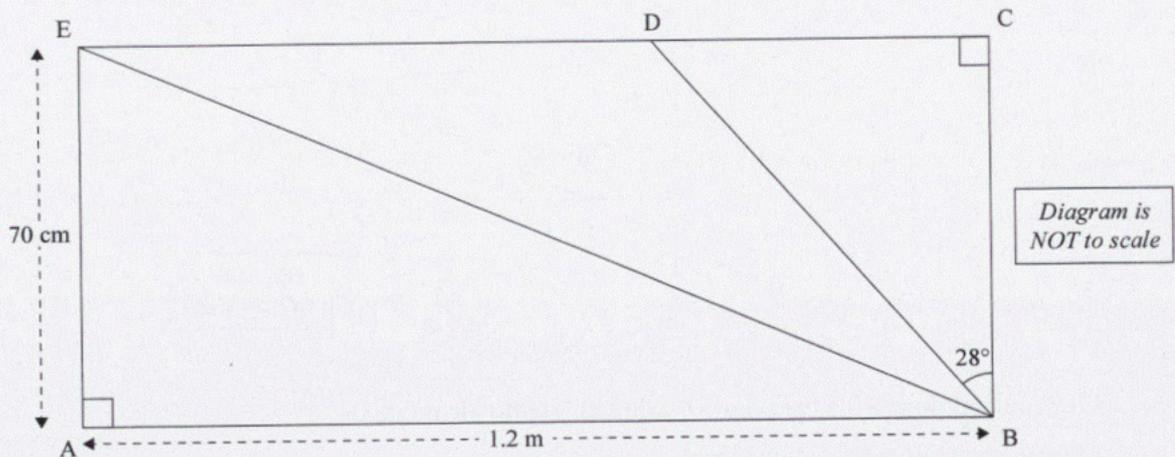

$$= 5.5$$

$$\text{point } Q = (2.5, 5.5)$$

(c) The diagram below shows a rectangle ABCE.

Length AE = 70 cm, length AB = 1.2 m, angle CBD =  $28^\circ$ .

Find the perimeter of triangle BDE.

$$EB^2 = 0.7^2 + 1.2^2$$

$$EB = 1.39 \text{ m}$$

$$CB = EA = 0.7 \text{ m}$$

$$\cos(28^\circ) = \frac{0.7}{DB}$$

$$DB = 0.79 \text{ m}$$

$$\tan(28^\circ) = \frac{DC}{0.7}$$

$$DC = 0.37 \text{ m}$$

$$ED = 1.2 - 0.37$$

$$= 0.83 \text{ m}$$

$$\text{Perimeter} = 0.83 + 0.79 + 1.39$$

$$= 3.01 \text{ m}$$

**This page has been deliberately left blank.  
The examination continues on the following page.**

- (d) The relationship between the  $x$  and  $y$  values in a sequence is shown in the table below:

$x$	$y$
1	11
2	29
3	83
4	245
5	731

118 136 172  
154 108 144  
162 324 216  
486

- (i) Find an equation that represents  $y$ , for any given  $x$ -value.

Show working to support your answer.

$$y = a^{x+1} + ?$$

$$y = 3^{x+1} + 2$$

$$11 = 3^{1+1} + 2$$

$$29 = 3^{2+1} + 2$$

$$83 = 3^{3+1} + 2$$

$$245 = 3^{4+1} + 2$$

$$731 = 3^{5+1} + 2$$

- (ii) The graph of  $y$  could be drawn, for all values of  $x$ .

Identify THREE different features of the graph of  $y$ , using your equation found in part (d)(i).

You may choose to use the set of axes below, if it helps you.

Feature 1: ~~This is an exponential equation with the a value greater than 1.~~

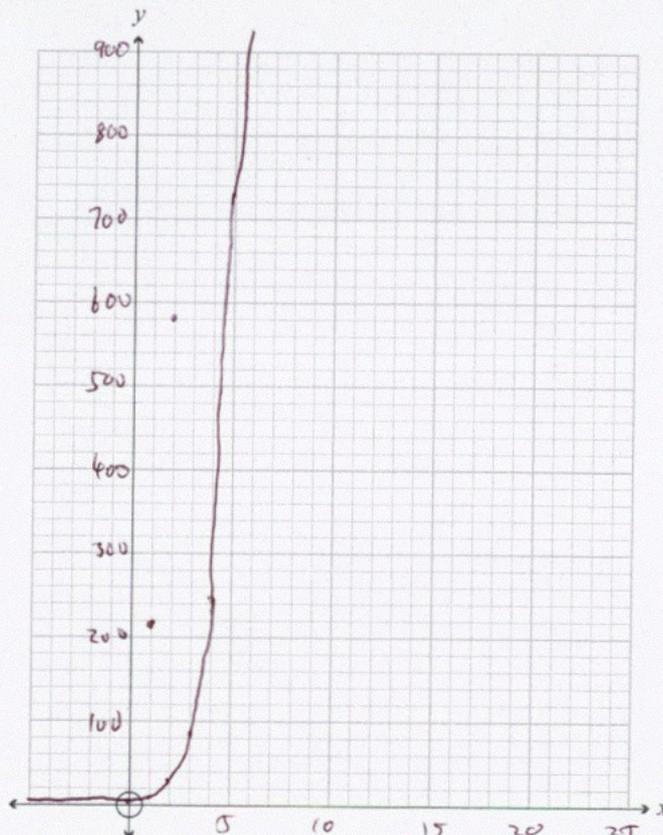

The graph shifts 1 unit to the left.  
( $y = 3^{\underline{x+1}} + 2$ )

Feature 2: The graph shifts 2 units ~~to the~~ up.

$$(y = 3^{x+1} + \underline{\underline{2}})$$

Feature 3: The  $y$ -intercept of this graph is  $y = 5$

$$\begin{aligned} y &= 3^{0+1} + 2 \\ &= 5 \end{aligned}$$

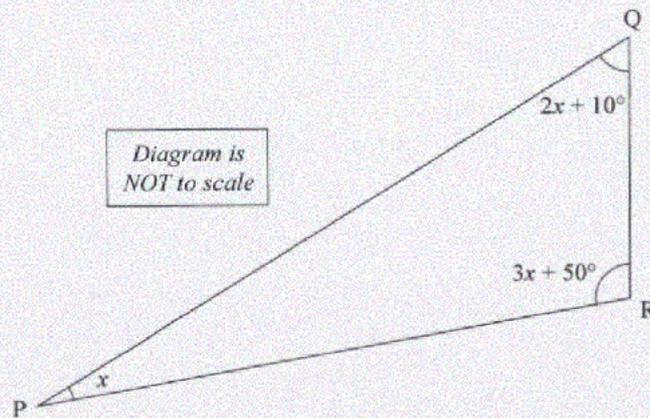

**QUESTION TWO**

- (a) The diagram below shows a triangle PQR.

Find the value of  $x$ .

Clearly show all steps of your working.

$$180 = x + (2x + 10) + (3x + 50)$$

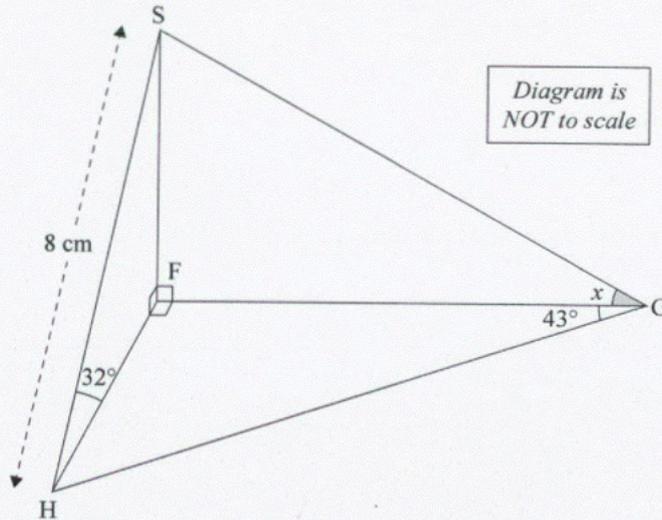

$$120 = 6x$$

$$x = 20^\circ$$

- (b) In the three-dimensional diagram below, triangle  $FGH$  is a right-angled triangle with angle  $GFH = 90^\circ$ .

Line  $FS$  is vertical and is perpendicular to the base triangle  $FGH$ .

Angle  $SHF = 32^\circ$ , angle  $FGH = 43^\circ$ ,  $SH = 8$  cm.

Find the size,  $x$ , of angle  $SGF$ .

Clearly show all steps of your working.

$$\sin(32^\circ) = \frac{SF}{8}$$

$$SF = 4.24 \text{ cm}$$

$$\cos(32^\circ) = \frac{HF}{8}$$

$$HF = 6.78 \text{ cm}$$

$$\tan(43^\circ) = \frac{6.78}{FG}$$

$$FG = 7.28 \text{ cm}$$

$$x = \tan^{-1}\left(\frac{4.24}{7.28}\right)$$

$$x = 30.22^\circ$$

(c) Factorise AND solve the equation below, using an algebraic method.

Give your answer(s) as simplified fractions.

$$15x^2 = 2 - 7x$$

$$15x^2 + 7x - 2 = 0$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

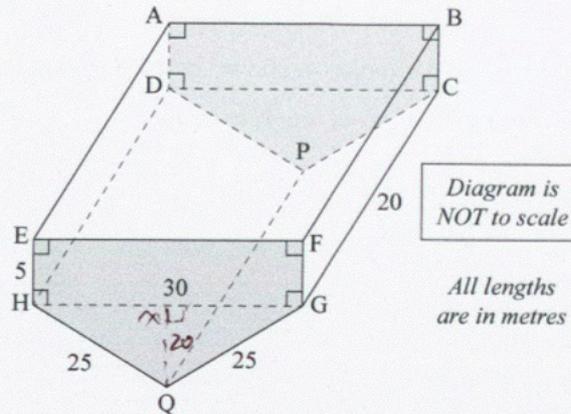

$$x = \frac{-7 \pm \sqrt{49 + 120}}{30}$$

$$= \frac{-7 \pm 13}{30}$$

$$x_1 = \frac{1}{5}$$

$$x_2 = -\frac{2}{3}$$

- (d) The diagram below shows the cross-section and plan of a large hole dug in the ground. The top section is a cuboid and the hole is symmetrical about the line PQ. All sides and the two ends (ABCPD and EFGQH) are vertical. It is known that  $1 \text{ m}^3$  of earth weighs 800 kg. One truck is able to transport 45 tonnes of earth in one single load.

Calculate the number of truck trips required to remove all the earth from the hole.

Show full working and justify your answer.

$$\begin{aligned} \text{Cuboid} &= 5 \times 30 \times 20 \\ &= 3000 \text{ m}^3 \end{aligned}$$

$$\begin{aligned} \text{Triangle height} &= \sqrt{25^2 - 15^2} \\ &= 20 \text{ m} \end{aligned}$$

$$\begin{aligned} \text{Triangular Prism} &= \frac{1}{2} \times 30 \times 20 \times 20 \\ &= 6000 \text{ m}^3 \end{aligned}$$

$$\begin{aligned} \text{Total} &= 3000 + 6000 \\ &= 9000 \text{ m}^3 \end{aligned}$$

$$\begin{aligned} \text{Total Weight} &= \frac{9000 \times 800}{1000} \\ &= 7200 \text{ tonnes} \end{aligned}$$

$$\begin{aligned} \text{Truck Trips} &= \frac{7200}{45} \\ &= 160 \text{ trips} \end{aligned}$$

## QUESTION THREE

- (a) (i) Find the equation of the straight line L, shown in the diagram below.

$$\begin{cases} 0 = 5m + c & \textcircled{1} & -3 = m \\ 3 = 4m + c & \textcircled{2} & c = 15 \end{cases}$$

$$\textcircled{1} - \textcircled{2} \quad y = -3x + 15$$

- (ii) Find the equation of the parabola M, shown in the diagram below.

Justify your working with appropriate reasoning.

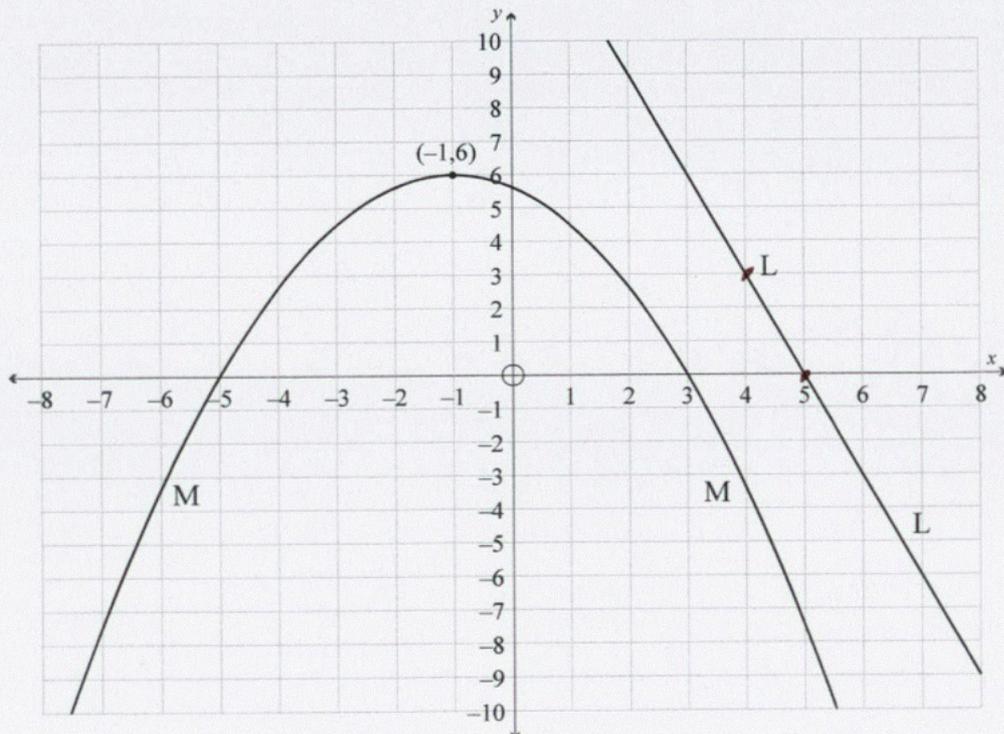

$$y = a(x-h)^2 + k$$

$$0 = a(3 - (-1))^2 + b$$

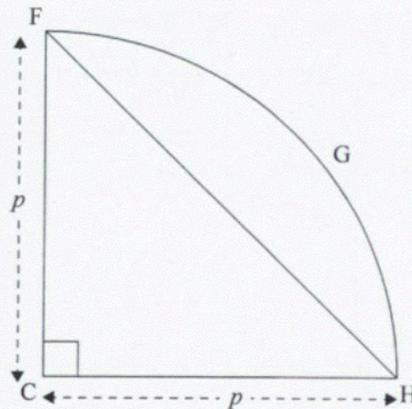

$$-6 = 16a$$

$$a = -\frac{3}{8}$$

$$y = -\frac{3}{8}(x+1)^2 + 6$$

- (b) The diagram below shows a quarter of a circle, with radius  $p$ , and centre  $C$ .

Calculate how much longer the curve  $FGH$  is than the straight line  $FH$ .

Give your answer in terms of  $p$ .

Clearly show all steps of your working.

$$FH^2 = p^2 + p^2$$

$$FH = \sqrt{2p^2}$$

$$FGH = \frac{1}{4}(2\pi p)$$

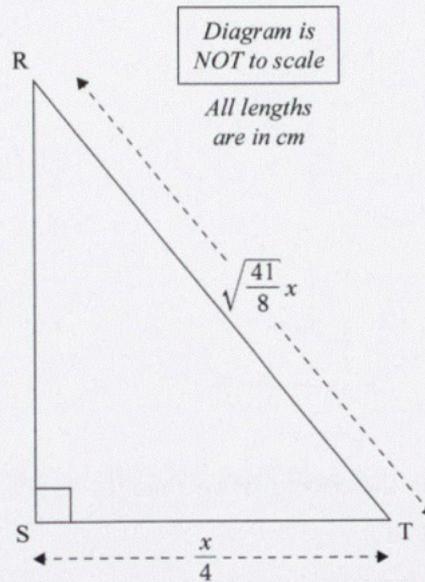

$$= \frac{1}{2}\pi p$$

$$\frac{1}{2}\pi p - \sqrt{2} p$$

$$\approx 0.16p$$

Question Three continues  
on the next page.

- (c) The area of the right-angled triangle shown below is  $72 \text{ cm}^2$ .

Find the value of  $x$ .

$$\left(\sqrt{\frac{41}{8}}x\right)^2 = RS^2 + \left(\frac{x}{4}\right)^2$$

$$5.125x^2 = RS^2 + \frac{x^2}{16}$$

$$16RS^2 = 81x^2$$

$$4RS = 9x$$

$$RS = \frac{9x}{4}$$

$$72 = \frac{1}{2} \left( \frac{9x}{4} \times \frac{x}{4} \right)$$

$$144 = \frac{9x^2}{16}$$

$$2304 = 9x^2$$

$$256 = x^2$$

$$x = 16$$

## Excellence

**Subject:** L1 Mathematics and Statistics

**Standard:** 91947

**Total score:** 24

Q	Grade score	Marker commentary
One	E8	The candidate has found the exponential equation and has identified 2 features of the curve.
Two	E8	The candidate has found the volume of the soil in the hole, converted it to tonnes, and then found the number of trips required.
Three	E8	The candidate has found the height RS, then used this height in an area formula to generate a quadratic equation. They have then solved the quadratic equation to find the value of $x$ .
