

41223 Operate and control separation processes in wastewater treatment

Kaupae Level	4
Whiwhinga Credit	10
Whāinga Purpose	This standard is for people who work as wastewater treatment operators. People with this skill standard have the skills to operate and control separation processes in wastewater treatment. This standard aligns with the New Zealand Certificate in Wastewater Treatment Operations (Level 4) with optional strands in Activated Sludge, Effluent Disinfection, Fixed Growth Reactor, Separation, Sludge Treatment, and Ponds [Ref: 5673] and may also contribute to other water services industry credentials.

Hua o te ako me Paearu aromatawai | Learning outcomes and assessment criteria

Hua o te ako Learning outcomes	Paearu aromatawai Assessment criteria
1. Operate separation processes for the treatment of wastewater.	a. Outline separation processes for the treatment of wastewater, in terms of purpose, operating principles, and relevant regulations.
	b. Explain the suitability of separation processes for treating wastewater.
	c. Operate separation processes to treat wastewater to meet operational and compliance requirements.
2. Control separation processes for the treatment of wastewater.	a. Perform process tests to optimise separation processes to meet operational and compliance requirements.
	b. Interpret monitoring results to identify trends, variations, and emerging process issues.
	c. Record monitoring results and operational adjustments, in accordance with operational requirements.

Hua o te ako Learning outcomes	Paearu aromatawai Assessment criteria
3. Maintain plant and equipment for separation processes in wastewater treatment.	a. Maintain plant and equipment to ensure optimal separation functionality.
	b. Identify and respond to faults or failures in accordance with operational requirements.
	c. Record maintenance in accordance with operational requirements.

Pārongo aromatawai me te taumata paearu | Assessment information and grade criteria

Assessment specifications:

Ākonga must demonstrate that they can safely, consistently, and competently operate separation processes in accordance with operational requirements, and applicable legislative and regulatory requirements.

Assessment for this skill standard must be based on practical performance and supported by evidence that must take place in an operational wastewater treatment environment where processes for wastewater separation occur.

Assessment must cover the full range of separation processes relevant to this skill standard that are in use at the candidate's workplace.

Evidence must demonstrate consistent performance over time, not one-off tasks.

Definitions

Candidate's workplace (for assessment purposes) means the operational treatment site(s) nominated by the employer as the workplace for assessment, that includes the full range of processes relevant to this assessment standard and to the candidate's expected duties. Where the employer operates multiple treatment sites, the nominated workplace must not be limited to a site with minimal relevant processes where this would prevent evidence being gathered for the full range of processes relevant to this assessment standard.

Operational requirements refer to the documented and embedded ways of working that govern how activities are planned, performed, monitored, and controlled in the workplace to ensure safe, consistent, and compliant operations.

Water services refer to industries responsible for working on or around water supplies, networks, plants, and systems.

Ngā momo whiwhinga | Grades available

Achieved.

Ihirangi waitohu | Indicative content

Wastewater Separation Processes and Operation

- Purpose and function of wastewater separation processes.
- Hydraulic layout, flow paths, and process configuration.
- Settlement, air-based flotation, and filtration processes.
- Reduction and removal of solid matter to achieve required treatment outputs.

Monitoring, testing and process control

- Process tests used to monitor separation performance.
- Interpretation of monitoring results.
- Process adjustments to meet compliance requirements.

Solids Handling

- Solids wasting and return methods.

Maintenance and supporting activities

- Common process faults and causes.
- Adjustment and verification of plant, instruments, and equipment.
- Routine and corrective maintenance activities.
- Process failure and incident response procedures.
- Completion of process records and reports to meet operational and compliance requirements.

Rauemi | Resources

Legislation, regulations and/or industry standards relevant to this skill standard include, but are not limited to:

- Biosolids Reuse Guidelines – [Guidelines for Beneficial Use of Organic Materials on Productive Land](#) and [Beneficial reuse of biosolids standard | The Water Services Authority - Taumata Arowai](#).
- Wastewater Standards – [Wastewater standards | The Water Services Authority - Taumata Arowai](#).
