

Field Engineering and Technology**Review of *Generic Infrastructure Works* unit standard**

Subfield	Domain	ID
Infrastructure Works	Generic Infrastructure Works	20875

The Infrastructure ITO has completed the review of the unit standard listed above.

Date new version published

July 2017

Planned review date

December 2021

Summary

This standard was reviewed at the request of The Skills Organisation and the Crane Association of New Zealand as part of an initiative to improve safety and make training in cranes more consistent.

A working group, consisting of infrastructure industry representatives, met twice in 2016 to discuss and agree on changes to outcomes, performance criteria, and guidance information. The standard was then circulated throughout wider industry for consultation and feedback. The final standard was signed off by industry representatives in February 2017, however, submission was delayed allowing for registration of the prerequisite standard Unit 30072, *Demonstrate and apply knowledge of slinging regular loads safely*.

Main changes

- Standard 20875 has been replaced by standard 30442 as it was determined holders of previous versions would not have the same set of skills and knowledge as holders of the new version.
- The level increased from Level 2 to Level 3.
- Prerequisite standard 30072 was added.
- Reference to slinging was removed throughout the standard, including the title.
- Legislation, references and other guidance information were updated.
- A new outcome covering establishing weight and included lifting angle of an object to be lifted was added.

This Category C unit standard will expire at the end of December 2018

Detailed list of unit standards – classification, title, level, and credits

All changes are in **bold**.

Key to review category	
A	Dates changed, but no other changes are made - the new version of the standard carries the same ID and the same version number
B	Changes made, but the overall outcome remains the same - the new version of the standard carries the same ID and a new version number
C	Major changes that necessitate the registration of a replacement standard with a new ID
D	Standard will expire and not be replaced
