### Guidance Information

- 1 This unit standard must be assessed against on-job and may be achieved through a variable height first lift pruning operation.
- 2 Legislation relevant to this unit standard includes the Health and Safety at Work (HSW) Act 2015; the Resource Management (National Environmental Standards for Plantation Forestry) Amendment Regulations 2018; and any subsequent amendments.
- 3 References  
*Approved Code of Practice (ACOP) for Safety and Health in Forestry Operations*, December 2012, available from <https://worksafe.govt.nz/>.  
 New Zealand Forest Owners Association, *Forest Practice Guides* (2019), and any subsequent amendments, available from <https://www.nzfoa.org.nz>.
- 4 Definitions  
*Accepted industry practice* – approved codes of practice and standardised procedures accepted by the wider forestry industry as examples of best practice.  
*Job prescription* refers to any written instructions for the operation and may include maps, harvest plans or cut plans.  
*PPE* – personal protective equipment as required for the task in accordance with accepted industry practice and worksite procedures. This may include but is not limited to high-visibility clothing, protective clothing, gloves, face and eye protection, safety helmet, approved footwear, chaps, hearing protection, and safety devices.

*Worksite procedures* refer to documented procedures used by the organisation carrying out the work and applicable to the tasks being carried out. They may include but are not limited to – standard operating procedures, site safety procedures, equipment operating procedures, quality assurance procedures, housekeeping standards, procedures to comply with legislative and local body requirements.

- 5 It is recommended that candidates seeking credit for this unit standard hold prior credit for Unit 1243, *Prune plantation trees from the ground*.

---

## Outcomes and performance criteria

### Outcome 1

Maintain and check equipment used for pruning plantation trees from off the ground.

#### Performance criteria

- 1.1 All items of equipment are maintained in accordance with accepted industry practice.
- Range may include but is not limited to – pruners or loppers, jacksaw, pouch, steps, gauge, epicormic remover, ladder, safety belt or fall restraint (as required).
- 1.2 Spare parts and maintenance tools are checked and available to enable equipment maintenance.
- Range may include but is not limited to – bolts, nuts, cutting blades, saw blades, spanners, screwdriver, sharpening files or stones.
- 1.3 Ladders used meet requirements of accepted industry practice.
- 1.4 Ladders are checked daily and maintained in accordance with accepted industry practice.
- Range rungs and stiles, feet, chain and attachments, top working platform.
- 1.5 Ladder length meets pruning height requirements of the job prescription.
- 1.6 Safety belts and harnesses used meet the requirements of accepted industry practice.
- 1.7 First aid requirements are checked and available in accordance with the requirements of accepted industry practice.

### Outcome 2

Prepare for pruning from off the ground.

**Performance criteria**

- 2.1 PPE is maintained, selected, and worn in accordance with accepted industry practice and worksite procedures.
- 2.2 The risks specific to pruning from off the ground are assessed and controlled in accordance with accepted industry practice.
- 2.3 Key features of the block and boundaries are identified physically on site and on the map in accordance with the job prescription.
- Range may include but is not limited to – distance, block boundaries, access points, exit points, gullies, streams, roads, environmentally or culturally sensitive sites, emergency evacuation point; evidence of six is required.
- 2.4 The reason for on-going risk management is explained in accordance with accepted industry practice.
- 2.5 Factors that may alter risks or introduce new risks are described in accordance with accepted industry practice.
- Range evidence of three factors is required.
- 2.6 The emergency response procedures are identified and described in accordance with worksite procedures.
- 2.7 Requirements for safety belts and harnesses are stated in accordance with accepted industry practice.

**Outcome 3**

Prune plantation trees to job prescription requirements from off the ground.

**Performance criteria**

- 3.1 Job prescription is used to establish quality and specific job requirements.
- Range stems per hectare (SPH), pruned height, minimum spacing, selection criteria.
- 3.2 Trees for pruning are selected in accordance with the job prescription and to complement the tree selection of other workers in accordance with accepted industry practice.
- 3.3 Work practice is safe in accordance with accepted forestry industry practice.
- Range where required, safety belts and harnesses are used in accordance with accepted industry practice.
- 3.4 Trees are pruned in accordance with the job prescription.

- 3.5 Work method and work pattern suit the needs of the particular operation in accordance with accepted industry practice, and the job prescription.
- 3.6 Branches and epicormics are removed flush with the branch collar and stem with minimal damage to stems and no defects in accordance with the job prescription.
- 3.7 Ladder and climbing aids are used and handled in accordance with accepted industry practice.
- 3.8 Communication with other crew members ensures pruning requirements are met.

#### Outcome 4

Demonstrate knowledge of, and assess, pruning quality.

#### Performance criteria

- 4.1 Processes for maintaining standards of quality within a pruning operation are described in accordance with worksite procedures and accepted industry practice.
- Range may include but is not limited to – plotting, supervision, audits, safe behaviour observations, self-checks, training; evidence of two is required.
- 4.2 The importance of regular quality control procedures within a pruning operation is explained in accordance with accepted industry practice.
- 4.3 Effects of pruning too many or too few stems are described in accordance with accepted industry practice.
- Range may include but is not limited to – operational costs, job efficiency, influence on future operations, decrease in prune crop volume and value, reworks; evidence of four is required.
- 4.4 Effects of incorrect heights (over-prune, under-prune) are explained in accordance with accepted industry practice.
- Range growth, tree death, production rate, tree stress, payment, reworks, infection risk.
- 4.5 Own pruning work is assessed for quality as work progresses to ensure output meets predetermined production and quality requirements.
