

<b>Title</b>	<b>Calculate lengths, areas, and costs and percentages of waste for furniture making</b>		
<b>Level</b>	<b>3</b>	<b>Credits</b>	<b>6</b>

<b>Purpose</b>	People credited with this unit standard are able to calculate lengths, areas, and costs and percentages of waste for furniture making.
----------------	--

<b>Classification</b>	Furniture > Furniture and Cabinet Making
-----------------------	--

<b>Available grade</b>	Achieved
------------------------	----------

---

### Guidance Information

- 1 Assessment information  
All calculations in this unit standard must be recorded on paper. Where performance criteria require the candidate to measure components, the candidate must record the component measurements.
- 2 Range  
Demonstration of competence for this unit standard must include – addition, subtraction, multiplication, division.

---

### Outcomes and performance criteria

#### Outcome 1

Calculate lengths for furniture making.

#### Performance criteria

- 1.1 Required length of timber for a job is calculated from a cutting list.  
Range cutting list must include – at least four different length components.
- 1.2 Diameter of a circular component is measured and used to calculate the required length of edging tape to edge the component.  
Range workings must include – identification of middle of circle, calculation of radius, calculation of circumference.
- 1.3 The total length of edging tape required to edge a rectangular panel is calculated.

**Outcome 2**

Calculate areas for furniture making.

**Performance criteria**

- 2.1 Components to be cut from panels are measured and their surface areas calculated.
- Range must include at least one of – circular component, rectangular component, triangular component, square component.
- 2.2 Total number of panels required for a job is calculated from a supplied cutting list and cutting plan.
- 2.3 The total surface area of a selected cabinet requiring spray coating is calculated.
- 2.4 A selected pack of timber is measured, and its cubic volume calculated.

**Outcome 3**

Calculate costs and percentages of waste for furniture making.

**Performance criteria**

- 3.1 Cost of the required length of timber in performance criterion 1.1 is calculated.
- Range must include – obtaining cost of timber per metre, percentage allowance for waste.
- 3.2 Percentage of waste for the panels to be cut in performance criterion 2.1 is calculated.
- 3.3 Percentage of waste calculated is converted to dollar value.
- Range must include – obtaining cost of panels.
