

<b>Title</b>	<b>Operate a bundler system for tissue products</b>		
<b>Level</b>	<b>2</b>	<b>Credits</b>	<b>6</b>

<b>Purpose</b>	People credited with this unit standard are able to: demonstrate knowledge of the fundamentals of the operation of a bundler system; operate a bundler system for tissue products; and monitor and control the basic performance of a bundler system.
----------------	---

<b>Classification</b>	Wood Fibre Manufacturing > Tissue Converting
-----------------------	--

<b>Available grade</b>	Achieved

### Guidance Information

- 1 Legislation, regulations and/or industry standards relevant to this unit standard include but are not limited to the:
  - Health and Safety at Work Act 2015
  - Resource Management Act 1991.

Any new, amended or replacement Acts, regulations, standards, codes of practice, guidelines, or authority requirements or conditions affecting this unit standard will take precedence for assessment purposes, pending review of this unit standard.

- 2 Definitions
 

*Tissue products* refer to bathroom tissue, towel, napkins, and facial tissue.

*Worksite policies and procedures* refer to documented policies and to documented or other directions provided to staff. These include but are not limited to – ways of managing health and safety, environmental considerations, quality, and production, and must conform to legislation. Examples include – standard operating procedures, company health and safety plans, on-site briefings, and supervisor’s instructions.
- 3 Assessment information
 

Evidence presented for assessment against this unit standard must be consistent with safe working practices and be in accordance with applicable service information, worksite policies and procedures and legislative requirements. This includes the knowledge and use of worksite specific equipment, procedures, and practices.

This unit standard may be assessed in the workplace using naturally occurring evidence or in a simulated environment that demands performance equivalent to that required in the workplace. All activities and evidence must be in accordance with worksite policies and procedures.

This unit standard does not include loading and thread up of raw materials or the changeover of a bundler system.

---

## Outcomes and performance criteria

### Outcome 1

Demonstrate knowledge of the fundamentals of the operation of a bundler system.

#### Performance criteria

- 1.1 The operational capabilities of a bundler system are described.
- 1.2 The purpose of the operating components of a bundler system is explained.
- Range operating components may include but are not limited to – pack turner, pack infeed, collator, piston pusher, elevator, main ram, chop off clamps, control panels, conveyors, up-ender, label applicators.
- 1.3 Hazards associated with a bundler system and the role of relevant protective equipment and safety features are explained.
- Range hazards may include but are not limited to – in running nips, moving parts, automated processes, sharp edges, hot machine parts, chemicals, noise, compressed air; evidence of a minimum of five is required; safety features may include but are not limited to – energy isolation procedures, lockouts, emergency stops, guards.
- 1.4 The consequences of non-conformance with worksite policies and procedures are explained.

### Outcome 2

Operate a bundler system for tissue products.

#### Performance criteria

- 2.1 Safe work practices associated with operating a bundler system are demonstrated.
- Range practices may include but are not limited to – energy isolation procedures, lock outs, emergency stops, machine guarding, wearing of appropriate safety equipment.
- 2.2 Incoming products to be bundled are assessed against specification and action is taken on non-conforming products.
- 2.3 Bundler system is started up, operated, stopped, and shut down in accordance with specific operating procedures.
- 2.4 Product quality is achieved by means of setting and/or adjustment of system in accordance with specific operating procedures.

2.5 Equipment faults and malfunctions and damaged or worn plant are reported.

Range equipment faults may be – mechanical, electrical, hydraulic, or pneumatic.

2.6 Bundler lubrication is maintained.

2.7 The bundler system and work area are cleaned and prepared for next use.

### Outcome 3

Monitor and control the basic performance of a bundler system.

#### Performance criteria

3.1 Productivity and quality is maintained by means of monitoring performance and adjustment of control parameters.

3.2 Waste is minimised and recycled.

3.3 Rejection of any out of specification product is carried out.

<b>Planned review date</b>	31 December 2028
