

Title	Carry out a centrifugal separation process to separate milk components in a dairy processing operation		
Level	4	Credits	5

Purpose	People credited with this unit standard are able to: describe the centrifugal separation process; prepare centrifugal separation equipment for operation; and operate and monitor the centrifugal separation equipment, in a dairy processing operation.
----------------	--

Classification	Dairy Processing > Milk Processing
-----------------------	------------------------------------

Available grade	Achieved
------------------------	----------

Guidance Information

- 1 Legislation and regulations relevant to this unit standard include but are not limited to:
 - Health and Safety at Work Act 2015;
 - Health and Safety in Employment Regulations 1995;
 - Animal Products Act 1999;
 - Animal Products (Dairy) Regulations 2005;
 and any subsequent amendments.
- 2 All evidence presented in this unit standard must be in accordance with:
 - organisational requirements.
- 3 Definitions

Centrifugal separation equipment – refers to hermetic separators and semi-open separators. Variations to the semi-open separators include – soft stream inlet, cold milk separators, warm or hot separators, cream cheese or quarg separators.

Control points – refer to those key points in a work process which must be monitored and controlled. This includes food safety (critical) quality and regulatory control points as well as inspection points.

Materials – refers to milk products and/or milk components as required.

Organisational requirements – instructions to staff on policies and procedures which are documented in memo, electronic or manual format and are available in the workplace. These requirements include but are not limited to – site specific requirements, company quality management requirements.
- 4 This unit standard must be assessed in a realistic workplace environment. The candidate must be under realistic time pressures and use relevant commercial equipment.

Outcomes and performance criteria

Outcome 1

Describe the centrifugal separation process in a dairy processing operation.

Performance criteria

- 1.1 Describe the centrifugal separation process in terms of basic principles.
- 1.2 Describe cleaning and sanitation requirements and procedures for a centrifugal separation process.
- 1.3 Describe components of a centrifugal separator in terms of the functions and basic operating principles.
- Range evidence is required of three components.
- 1.4 Describe the effect of the quality, composition and physical characteristics of raw materials in terms of separation process outcomes.
- 1.5 Describe the main centrifugal separation controls and quality control points in terms of their effects on the quality of the product.
- Range controls and control points may include but are not limited to – procedures, operating parameters, equipment and instrumentation components, materials and services; evidence of three controls is required; effects may include but are not limited to – physical quality, functional quality, microbiological quality, consistency of quality; evidence of three effects is required.
- 1.6 Describe a critical control point in terms of key operating parameters, monitoring and operational checks.

Outcome 2

Prepare centrifugal separation equipment for operation in a dairy processing operation.

Performance criteria

- 2.1 Identify production requirements for centrifugal separation.
- 2.2 Confirm materials and services necessary to the centrifugal separation process are available to meet production requirements.
- 2.3 Check centrifugal separation equipment in terms of status, condition and readiness for use.

Outcome 3

Operate and monitor centrifugal separation equipment in a dairy processing operation.

Performance criteria

- 3.1 Start up the centrifugal separation equipment.
- 3.2 Monitor centrifugal separation equipment, product and control points to confirm that they meet production requirements.
- Range monitoring may include but is not limited to – monitoring control points and parameters, adjusting operating parameters, plant checks, identifying sampling and testing requirements, taking samples, handling samples, dispatch of samples, conducting tests; evidence of three monitoring examples is required.
- 3.3 Identify, rectify and/or report any out-of-specification product, process and equipment performance.
- 3.4 Clean and sanitise centrifugal separation equipment.
- 3.5 Record workplace information related to operating and monitoring centrifugal separation equipment.
- 3.6 Shut down centrifugal separation equipment.
- Range shutdown includes but is not limited to – putting plant on standby, routine, emergency situation.

Planned review date	31 December 2025
----------------------------	------------------

Status information and last date for assessment for superseded versions

Process	Version	Date	Last Date for Assessment
Registration	1	30 June 2003	31 December 2014
Rollover and Revision	2	20 June 2006	31 December 2014
Rollover and Revision	3	17 July 2009	31 December 2016
Review	4	18 June 2015	31 December 2024
Review	5	27 May 2021	N/A
Revision	6	26 January 2023	N/A
