

Title	Operate a waste gas system in a kraft pulp chemical plant		
Level	4	Credits	5

Purpose	People credited with this unit standard are able to: explain fundamentals of a waste gas system; operate a waste gas system efficiently; and monitor and control the efficient performance of a waste gas system.
----------------	---

Classification	Wood Fibre Manufacturing > Pulp and Paper - Chemical Plants
-----------------------	---

Available grade	Achieved
------------------------	----------

Entry information	
Critical health and safety prerequisites	Unit 3626, <i>Manufacture burnt lime for kraft liquor production in a pulp and paper plant</i> ; or demonstrate equivalent knowledge and skills.

Explanatory notes

- 1 Definition
Worksite documentation refers to instructions to staff on policy and procedures (including the application of legislation to worksite situations) which are formally documented, and are available for reference at the worksite. Examples are standard operating procedures, specifications, manuals, and manufacturer’s information.

- 2 The following apply to the performance of all outcomes of this unit standard:
 - a All work practices must meet recognised codes of practice and documented worksite health and safety and environmental procedures (where these exceed code) for personal, product, and worksite health and safety, and must meet the obligations required under current legislation, including the Health and Safety in Employment Act 1992, the Resource Management Act 1991, the Hazardous Substances and New Organisms Act 1996, and their subsequent amendments.
 - b All work practices must meet documented worksite operating procedures. This includes the recording (by electronic or non-electronic means) of activities, events, and decisions.
 - c All communications made in relation to this unit standard must be made in accordance with worksite procedures for content, recipient, timing, and method.

Outcomes and evidence requirements

Outcome 1

Explain fundamentals of a waste gas system.

Evidence requirements

- 1.1 Purpose and operation of the waste gas system are explained in accordance with worksite documentation.
- 1.2 Operating components and process controls of the waste gas system are identified, and their purpose and operation are explained, in accordance with worksite documentation.
- Range includes but is not limited to – waste producers, system ejector, scrubber, incinerator, lime kiln.
- 1.3 Operating parameters and capability of the waste gas system are explained in accordance with worksite documentation.
- Range operating parameters may include but are not limited to – vacuum, scrubber level, temperature, incinerator temperature, kiln temperature.
- 1.4 Effect of waste gas on lime kiln operation is described in accordance with worksite documentation.
- 1.5 Hazards associated with the waste gas system are identified and actions to be taken to isolate, minimise, or eliminate the hazard are described in accordance with worksite documentation.
- Range hazards may include but are not limited to – chemicals, heat, waste gas, confined space, environmental.
- 1.6 Environmental impact on the effluent system caused by chemical loss to drains is described in accordance with worksite documentation.
- 1.7 Consequences of non-conformance with worksite operating procedures are described in accordance with worksite documentation.
- Range consequences relating to – product quality, health and safety concerns, environmental concerns.
- 1.8 Roles and responsibilities of the waste gas operator are described in accordance with worksite documentation.

Outcome 2

Operate a waste gas system efficiently.

Evidence requirements

2.1 Safe work practices associated with operating the waste gas system are identified and used in accordance with worksite documentation and legislative requirements.

Range practices may include but are not limited to – isolation procedures, lock-outs, emergency stops, machine guarding, wearing appropriate safety equipment, waste gas work permits.

2.2 Plant is set up, started up, operated, and shut down efficiently in accordance with worksite documentation.

Outcome 3

Monitor and control the efficient performance of a waste gas system.

Evidence requirements

3.1 Monitoring and interpretation of feedback information and the timely adjustment of control parameters enables efficient plant performance, and process and legislative requirements to be maintained in accordance with worksite documentation.

3.2 Equipment faults and malfunctions are identified, and corrective action is taken, in accordance with worksite documentation.

Range equipment faults and malfunctions – electrical, mechanical, instrumentation, distributed control system.

3.3 Production and maintenance records are explained and completed in accordance with worksite documentation.

Planned review date	31 December 2019
----------------------------	------------------

Status information and last date for assessment for superseded versions

Process	Version	Date	Last Date for Assessment
Registration	1	18 December 2006	N/A
Review	2	24 October 2014	N/A

Consent and Moderation Requirements (CMR) reference	0173
--	------

This CMR can be accessed at <http://www.nzqa.govt.nz/framework/search/index.do>.

Please note

Providers must be granted consent to assess against standards (accredited) by NZQA, before they can report credits from assessment against unit standards or deliver courses of study leading to that assessment.

Industry Training Organisations must be granted consent to assess against standards by NZQA before they can register credits from assessment against unit standards.

Providers and Industry Training Organisations, which have been granted consent and which are assessing against unit standards must engage with the moderation system that applies to those standards.

Requirements for consent to assess and an outline of the moderation system that applies to this standard are outlined in the Consent and Moderation Requirements (CMR). The CMR also includes useful information about special requirements for organisations wishing to develop education and training programmes, such as minimum qualifications for tutors and assessors, and special resource requirements.
