

Title	Demonstrate area control procedural for air traffic services on site		
Level	7	Credits	75

Purpose	People credited with this unit standard are able to: demonstrate knowledge of area control procedures for the provision of air traffic services; analyse and manage traffic situations and apply area control procedures on site; and reflect on and self-manage performance in relation to own work environment.
----------------	---

Classification	Aviation > Air Traffic Services
-----------------------	---------------------------------

Available grade	Achieved
------------------------	----------

Prerequisites	Unit 28048, <i>Demonstrate area control surveillance for air traffic services under simulated conditions</i> ; and Unit 28047, <i>Demonstrate area control procedural for air traffic services under simulated conditions</i> ; or demonstrate equivalent knowledge and skills.
----------------------	---

Guidance Information

- 1 The Civil Aviation Act 1990 and Civil Aviation Rule Part 65 detail the legislative requirements in relation to this unit standard. This unit standard is aligned to the Civil Aviation Act 1990, Civil Aviation Rule Part 65, which reflects International Civil Aviation Organisation (ICAO) Standards and Recommended Practices as adopted by New Zealand. This unit standard is also aligned to the associated Civil Aviation Advisory Circular (AC) 65 series containing the syllabus for Air Traffic Services Personnel Licences and Ratings, and Parts 65.103(a)(5), and 65.303(a)(2). Information relating to Civil Aviation Authority of New Zealand (CAA of NZ) Rules can be obtained from the CAA of NZ website on <http://www.caa.govt.nz/>.
- 2 Evidence presented for assessment against this unit standard must be in accordance with standard industry texts.
- 3 *Standard industry texts* include but are not limited to:
State approved documentation,
air traffic services (ATS) provider exposition,
aerodrome emergency plans,
published aviation training manuals or textbooks.

4 Definitions

Abnormal refers to situations requiring the application of non-routine air traffic services procedures.

Complex refers to advanced air traffic skills requiring more than two or three tasks to be performed at any one time and with variable environment factors impacting upon the traffic situation.

Non-complex refers to basic air traffic skills not requiring more than two or three tasks to be performed at any one time and without variable environment factors impacting upon the traffic situation.

Outcomes and performance criteria

Outcome 1

Demonstrate knowledge of area control procedures for the provision of air traffic services.

Performance criteria

1.1 Area control procedures are described.

Range may include but is not limited to – separations, coordinations, flight progress system air traffic management.

1.2 The location-specific environment is described.

Range may include but is not limited to – aerodrome, airspace, terrain, weather, navigation aids, aerodrome and airspace users.

Outcome 2

Analyse and manage traffic situations and apply area control procedures on site.

Range non-complex, complex, abnormal and/or emergency situations.

Performance criteria

2.1 Area control procedures are applied.

2.2 The operation of flight progress systems is managed.

2.3 The interpretation of available flight and meteorology information is disseminated.

2.4 The operation of ATS equipment is managed.

2.5 Situational awareness as a basis for informed decision-making is demonstrated.

Range may include but is not limited to – airspace, weather, terrain, pilotage, flight processing system, aircraft performance, interpersonal factors.

- 2.6 Traffic situations are managed and prioritised.
- 2.7 Traffic positions are projected and visualised based on tactics, and onward movement of air traffic is planned.
- 2.8 The anticipation of aircraft responses is demonstrated.
- 2.9 Traffic situations are critically analysed for potential conflict, and timely instructions and/or information are given to ensure a safe, orderly, and expeditious traffic flow.
- 2.10 Timely coordination and transfer of responsibility are demonstrated.
- 2.11 Timely communication of flight instructions and information, using unambiguous and concise language and standard phraseology where documented, is demonstrated.

Range tone, clarity, rate; readbacks.
- 2.12 Situations with potential to become unsafe are recognised and resolutions are applied.

Range may include but is not limited to – traffic information, aircraft performance, weather, pilot ability, available procedures, environmental factors.
- 2.13 Area control procedural administrative documentation procedures are demonstrated.

Outcome 3

Reflect on and self-manage performance in relation to own work environment.

Performance criteria

- 3.1 Responsibility is taken for own performance and own errors are self-corrected.
- 3.2 Work rate and focus are adjusted to suit traffic levels.

Range non-complex, moderate, complex work environment.
- 3.3 Feedback is used to improve and manage performance.
- 3.4 Performance is self-evaluated and improvements are made as necessary.

Replacement information	This unit standard and unit standard 23457 replaced unit standard 15544.
