## Guidance Information

- 1 Any assessments requiring application of organisational requirements may be performed using workplace organisational requirements, or simulation/scenario-based activities utilising sector good practice guidelines and/or current New Zealand Resuscitation Council Guidelines and Publications.
- 2 Definitions  
*Emergency care first response context* – for the purposes of this unit standard, this refers to situations where emergency care is delivered in a variety of out-of-hospital environments, largely by non-health professionals, prior to transfer of care to ambulance crew or other health care professional. Emergency care in this context recognises and responds to respiratory and circulatory insufficiency, changes in levels of consciousness, and responds to other conditions using devices and/or techniques readily available to non-health professionals.
- 3 References  
References include New Zealand Resuscitation Council (NZRC) guidelines and publications; and/or the protocols of the organisation employing the candidate; and/or equipment manufacturer's documentation; and/or current texts relating to out-of-hospital emergency care practices. NZRC handbooks and guidelines relating to all aspects of adult, child, and infant basic life support are available at <http://www.nzrc.org.nz>.

## Outcomes and performance criteria

### Outcome 1

Demonstrate understanding of the use of common medications relevant to the emergency care first response context.

### Performance criteria

1.1 Explain common medications in terms of when and how they should and should not be used, and dosages.

Range includes but is not limited to – aspirin, salbutamol, glyceryl trinitrate (GTN), adrenaline (for anaphylaxis), oxygen, glucagon, pain relief (such as paracetamol etc).

1.2 Explain administration of common medications in accordance with organisational procedures.

<b>Planned review date</b>	31 December 2023
