<b>Classification</b>	Construction Trades > Carpentry
-----------------------	---------------------------------

<b>Available grade</b>	Achieved
------------------------	----------

### Guidance Information

This unit standard is one of a family of standards that align with the *New Zealand Certificate in Carpentry – Specifications* and should be read, interpreted and assessed in the context of those *Specifications* and the New Zealand Certificate in Carpentry (Level 4) [Ref: 2738].

The overarching level of performance for the family of unit standards is commercial competence.

Commercial competence requires a candidate to be capable of consistently performing the requirements of the skill specification:

- to current regulatory, industry and commercial standards;
- within a commercially viable timeframe;
- in commercial environments;
- without supervision;
- in different and unfamiliar contexts.

The sufficiency of evidence required to demonstrate commercial competence against this unit standard is determined within the context of the family of unit standards aligned to the *Specifications*.

The assessor must be confident that the candidate is capable of applying the skills and knowledge included in this skill specification to the level, scope and complexity required to support the achievement of related skills included in the *Specifications*.

Commercial competence can only be demonstrated, and must be assessed, in the workplace.

The assessment of commercial competence must be corroborated and confirmed by a person who has current expertise in the carpentry trade and has had the opportunity to regularly observe the candidate in the workplace.

## Skill specification and performance level guidance

### Skill specification

Demonstrate understanding of materials used for carpentry work.

**Know** The different types, sizes, finish, treatments and defects of timber used by the carpentry trade.

The methods of joining timber including joints, adhesives and connectors.

The different types, sizes, finish and treatments of steel used in the construction of buildings.

The methods of joining steel including welding and connectors.

The different types, applications and finishes of other metals used in the construction industry.

The different types, composition and applications of concrete used in the construction industry including ready mixed, precast and prestressed.

The different types and application of synthetic materials used in the construction industry.

### Performance level guidance

Steel includes heavy (hot rolled) and light gauged formed (cold rolled) steel.

Synthetic materials include plastics, glass, fibreglass, epoxies and silicones.

The level of knowledge required for timber should reflect the fact that timber is the primary material used by carpenters. The level of knowledge required for all other materials is proportional to their use in the industry, and in specific contexts.

The level of materials knowledge required is that of an industry practitioner rather than that of an expert with specialist knowledge.

<b>Replacement information</b>	This unit standard was replaced by skill standards 40301, 40302 and 40303.
--------------------------------	--

**This unit standard is expiring. Assessment against the standard must take place by the last date for assessment set out below.**

**Status information and last date for assessment for superseded versions**

Process	Version	Date	Last Date for Assessment
Registration	1	1 March 2018	31 December 2027
Rollover and Revision	2	15 December 2022	31 December 2027
Review	3	28 November 2024	31 December 2027
