### Guidance Information

This unit standard is one of a family of standards that align with the *New Zealand Certificate in Fibrous Plaster Manufacture – Specifications* and should be read, interpreted and assessed in the context of those *Specifications* and the New Zealand Certificate in Fibrous Plaster Manufacture (Level 4) with an optional strand in Specialist Models and Mould Making [Ref: 3062].

The overarching level of performance for the family of unit standards is commercial competence.

Commercial competence requires a candidate to be capable of consistently performing the requirements of the unit specification:

- to current regulatory, industry and commercial standards
- within a commercially viable timeframe
- in commercial environments
- without supervision
- in different and unfamiliar contexts.

The sufficiency of evidence required to demonstrate commercial competence against this unit standard is determined within the context of the family of unit standards aligned to the *Specifications*.

The assessor must be confident that the candidate is capable of applying the skills and knowledge included in this skill specification to the level, scope and complexity required to support the achievement of related skills included in the *Specifications*.

Commercial competence can only be demonstrated, and must be assessed, in the workplace.

The assessment of commercial competence must be corroborated and confirmed by a person who has current expertise in the fibrous plaster manufacture trade and has had the opportunity to regularly observe the candidate in the workplace.

## Skill specification and performance level guidance

### Skill specification

Cast fibrous plaster architectural elements.

**Know** Features of the different types of fibrous plaster architectural elements.

Properties and features of different types of moulds used to cast fibrous plaster architectural elements.

How to prepare and use different types of moulds.

Methods of casting different types of fibrous plaster architectural elements.

Methods of storing and drying fibrous plaster architectural elements.

The ratios of ingredients for plaster gauges used in the manufacture of fibrous plaster architectural elements.

**Do** Prepare moulds to cast fibrous plaster architectural elements.

Cast fibrous plaster architectural elements.

Remove architectural elements from the mould.

Store architectural elements cornice to dry.

### Performance level guidance

Types of fibrous plaster architectural elements include – arches, wall niches, battens, panels, tiles, columns and fire surrounds.

Types of moulds include – standard, piece or sectional made from fibreglass, timber, plaster, rubber or a combination of these.

The quantity of fibrous architectural elements required to be cast on any given day depend on the size, shape and complexity of the product; the availability, quality and set-up of tables and moulds; setting times appropriate to the product; and production requirements.

Casting includes – mixing and applying plaster gauges, adding reinforcement, screeding or forming the back.

Green architectural elements refer to the freshly cast elements yet to be dried.
