

<b>Title</b>	<b>Make specialist models for use in the manufacture of fibrous plaster products</b>		
<b>Level</b>	<b>4</b>	<b>Credits</b>	<b>20</b>

<b>Purpose</b>	<p>This unit standard aligns with the <i>New Zealand Certificate in Fibrous Plaster Manufacture – Specifications</i>, developed on behalf of the fibrous plaster manufacture industry to specify the skills and knowledge required to achieve the New Zealand Certificate in Fibrous Plaster Manufacture (Level 4) with an optional strand in Specialist Models and Mould Making [Ref: 3062].</p> <p>This unit standard is intended for those working in the fibrous plaster manufacturing industry.</p> <p>People credited with this unit standard are able to make specialist models for use in the manufacture of fibrous plaster products to the level required of a commercially competent fibrous plaster manufacturer.</p>
----------------	---

<b>Classification</b>	Construction Trades > Fibrous Plaster
-----------------------	---------------------------------------

<b>Available grade</b>	Achieved
------------------------	----------

<b>Prerequisites</b>	<p>Unit 31295, <i>Construct running moulds for fibrous plaster product manufacture</i>;</p> <p>Unit 31305, <i>Run moulds for fibrous plaster product manufacture</i>;</p> <p>or demonstrate equivalent knowledge and skills.</p>
----------------------	--

### Guidance Information

This unit standard is one of a family of standards that align with the *New Zealand Certificate in Fibrous Plaster Manufacture – Specifications* and should be read, interpreted and assessed in the context of those *Specifications* and the New Zealand Certificate in Fibrous Plaster Manufacture (Level 4) with an optional strand in Specialist Models and Mould Making [Ref: 3062].

The overarching level of performance for the family of unit standards is commercial competence.

Commercial competence requires a candidate to be capable of consistently performing the requirements of the unit specification:

- to current regulatory, industry and commercial standards
- within a commercially viable timeframe
- in commercial environments
- without supervision
- in different and unfamiliar contexts.

The sufficiency of evidence required to demonstrate commercial competence against this unit standard is determined within the context of the family of unit standards aligned to the *Specifications*.

The assessor must be confident that the candidate is capable of applying the skills and knowledge included in this skill specification to the level, scope and complexity required to support the achievement of related skills included in the *Specifications*.

Commercial competence can only be demonstrated, and must be assessed, in the workplace.

The assessment of commercial competence must be corroborated and confirmed by a person who has current expertise in the fibrous plaster manufacture trade and has had the opportunity to regularly observe the candidate in the workplace.

## Skill specification and performance level guidance

### Skill specification

Make specialist models for use in the manufacture of fibrous plaster products.

**Do** Determine requirements for making and repairing specialist models.

Create working drawings and/or sketches to portray specialist model requirements.

Select materials required for making and repairing specialist models.

Make and repair specialist models.

Prepare specialist models for mould making.

### Performance level guidance

Determining the desired look of the model requires use of drawings, specifications and photos.

Materials used for making and repairing models include plaster, clay, plasticine, adhesives, sealants, timber, timber composite boards, or a combination of these.

Methods of model making vary depending on model requirements, materials being used, complexity of shape, form and design, requirements for repeat patterns or embellishments or method of manufacture.

Preparation of models includes any sealing required as well as the construction of cases and setting rules.

Factors when considering the extent of repair work include cost, time, quality, quantity of casts required, proximity to eye level and required visual impact and the viability of repairing old rather than constructing new.

<b>Planned review date</b>	31 December 2023
