

Title	Make specialist moulds for use in the manufacture of fibrous plaster products		
Level	4	Credits	20

Purpose	<p>This unit standard aligns with the <i>New Zealand Certificate in Fibrous Plaster Manufacture – Specifications</i>, developed on behalf of the fibrous plaster manufacture industry to specify the skills and knowledge required to achieve the New Zealand Certificate in Fibrous Plaster Manufacture (Level 4) with an optional strand in Specialist Models and Mould Making [Ref: 3062].</p> <p>This unit standard is intended for those working in the fibrous plaster manufacturing industry.</p> <p>People credited with this unit standard are able to make specialist moulds for use in the manufacture of fibrous plaster products to the level required of a commercially competent fibrous plaster manufacturer.</p>
----------------	---

Classification	Construction Trades > Fibrous Plaster
-----------------------	---------------------------------------

Available grade	Achieved
------------------------	----------

Prerequisites	<p>Unit 31295, <i>Construct running moulds for fibrous plaster product manufacture</i>;</p> <p>Unit 31305, <i>Run moulds for fibrous plaster product manufacture</i>;</p> <p>or demonstrate equivalent knowledge and skills.</p>
----------------------	--

Guidance Information

This unit standard is one of a family of standards that align with the *New Zealand Certificate in Fibrous Plaster Manufacture – Specifications* and should be read, interpreted and assessed in the context of those *Specifications* and the New Zealand Certificate in Fibrous Plaster Manufacture (Level 4) with an optional strand in Specialist Models and Mould Making [Ref: 3062].

The overarching level of performance for the family of unit standards is commercial competence.

Commercial competence requires a candidate to be capable of consistently performing the requirements of the unit specification:

- to current regulatory, industry and commercial standards
- within a commercially viable timeframe
- in commercial environments
- without supervision
- in different and unfamiliar contexts.

The sufficiency of evidence required to demonstrate commercial competence against this unit standard is determined within the context of the family of unit standards aligned to the *Specifications*.

The assessor must be confident that the candidate is capable of applying the skills and knowledge included in this skill specification to the level, scope and complexity required to support the achievement of related skills included in the *Specifications*.

Commercial competence can only be demonstrated, and must be assessed, in the workplace.

The assessment of commercial competence must be corroborated and confirmed by a person who has current expertise in the fibrous plaster manufacture trade and has had the opportunity to regularly observe the candidate in the workplace.

Skill specification and performance level guidance

Skill specification

Make specialist moulds for use in the manufacture of fibrous plaster products.

Know The principles of specialist mould design.

Features of the different types of specialist moulds used to cast fibrous plaster products.

Do Determine specialist mould shape from working drawings, job specifications, or sample moulding or model.

Select materials to make specialist moulds.

Make specialist moulds.

Prepare specialist moulds for casting.

Performance level guidance

Principles include the application of positive and negative profiles, formation of edges, requirements associated with undercuts, ease of releasing cast moulding, use of different materials.

Types of specialist mould include flat, curved, sectional, piece, simple, complex, plain and enriched.

Factors for deciding the materials to be used include size and shape, enrichment requirements, number of casts required, cost, time to make, availability of model or sample or method of manufacture.

A variety of different moulds must be made using different materials.

Specialist moulds can be made from timber, timber composite boards, plaster, rubber, fibreglass, concrete, or a combination thereof.

Planned review date	31 December 2023
