

<b>Title</b>	<b>Performance test and repair faulty radar equipment to unit or component level</b>		
<b>Level</b>	<b>4</b>	<b>Credits</b>	<b>12</b>

<b>Purpose</b>	<p>This unit standard is intended for electronics technicians who are responsible for performance testing and the diagnosis and repair of faults in radar equipment to unit or component level.</p> <p>People credited with this unit standard are able to:</p> <ul style="list-style-type: none"> <li>– performance test radar equipment;</li> <li>– diagnose faulty radar equipment; and</li> <li>– repair, test, and restore radar equipment to service.</li> </ul>
----------------	--

<b>Classification</b>	Electronic Engineering > Electronic Installation and Maintenance
-----------------------	--

<b>Available grade</b>	Achieved
------------------------	----------

<b>Entry information</b>	
<b>Recommended skills and knowledge</b>	Unit 26725, <i>Demonstrate and apply knowledge of electronic product reliability and advanced electronic measurement and diagnosis</i> , or demonstrate equivalent knowledge and skills.

### Explanatory notes

- 1 This unit standard has been developed for learning and assessment on-job or off-job.

## 3 Definitions

*BITE* – built in test equipment.

*Enterprise practice* – those practices and procedures that have been promulgated by the company or enterprise for use by their employees.

*Industry practice* – those practices that competent practitioners within the industry recognise as current industry best practice.

*MDS* – minimum detectable signal.

*RF* – radio frequency.

*VSWR* – voltage standing wave ratio.

## 4 Range

- a The type of diagnosis and repair work required to achieve this unit standard must include:
  - i diagnosis and repair of equipment to unit and/or component level depending on servicing data and enterprise policy;
  - ii use of test instruments to identify faults, measure and adjust equipment, and confirm proper performance. Typical instruments include multimeters, oscilloscopes, signal generators, and signal tracers. More specialised instruments may be required depending on the nature of the equipment.
- b Electrical, radiation, and workshop or laboratory safety practices are to be observed at all times.
- c Measurements may be expressed in Système Internationale (SI) or Imperial units, and, where required, converted from Imperial units to SI units and vice versa.
- d Recognised industrial standards are to be used for calculations.
- e All activities and evidence presented for all outcomes and evidence requirements in this unit standard must be in accordance with legislation, policies, procedures, ethical codes, Standards, applicable site and enterprise practice, and industry practice; and, where appropriate, manufacturers' instructions, specifications, and data sheets.
- f Evidence is required of at least 10 different types of repairs covering a variety of faults on a range of equipment or products. The number and type of equipment chosen are left to the discretion of the assessor, but must be sufficient to assess competence in all outcomes of the unit standard.

---

## Outcomes and evidence requirements

### Outcome 1

Performance test radar equipment.

### Evidence requirements

1.1 Equipment operation is tested and compared against specifications.

Range	includes but is not limited to – display operations, anti-sea clutter, variable range marker, bearing marker, markers, cursors, index error check, stabilising, cooling, ancillary equipment interfacing, modes of operation.
-------	---

1.2 Equipment performance is tested and compared against specifications.

Range includes but is not limited to – BITE tests, RF output power and VSWR, frequency, MDS, index error.

1.3 Test results are recorded in accordance with enterprise practice.

## **Outcome 2**

Diagnose faulty radar equipment.

### **Evidence requirements**

2.1 Fault symptoms and/or substandard equipment performance are identified.

2.2 Diagnosis uses efficient diagnostic techniques, tools, instruments, BITE where available, and servicing data.

2.3 Diagnosis identifies the lowest replaceable or repairable faulty unit or component in accordance with servicing data and enterprise policy.

2.4 Components are protected from static damage by anti-static precautions.

2.5 Diagnostic processes do not damage the equipment.

2.6 Diagnostic report is in accordance with enterprise practice.

## **Outcome 3**

Repair, test, and restore radar equipment to service.

### **Evidence requirements**

3.1 Replacement or repair of faulty units or components is in accordance with servicing data and enterprise practice.

3.2 Replacement or repair does not damage other parts of the equipment.

3.3 Equipment is reassembled in a manner that prevents damage and conforms to the manufacturer's layout.

Range layout – lead dress, screw location, shields and screens, board positioning and securing, cover positioning and fastening.

3.4 Testing confirms electrical safety.

3.5 Testing confirms that the repaired equipment is ready for service.

3.6 All actions are recorded in accordance with enterprise practice.

<b>Planned review date</b>	31 December 2016

This CMR can be accessed at <http://www.nzqa.govt.nz/framework/search/index.do>.

#### Please note

Providers must be granted consent to assess against standards (accredited) by NZQA, before they can report credits from assessment against unit standards or deliver courses of study leading to that assessment.

Industry Training Organisations must be granted consent to assess against standards by NZQA before they can register credits from assessment against unit standards.

Providers and Industry Training Organisations, which have been granted consent and which are assessing against unit standards must engage with the moderation system that applies to those standards.

Requirements for consent to assess and an outline of the moderation system that applies to this standard are outlined in the Consent and Moderation Requirements (CMRs). The CMR also includes useful information about special requirements for organisations wishing to develop education and training programmes, such as minimum qualifications for tutors and assessors, and special resource requirements.
